AICTE Guidelines in Model Curriculum:

A student will be eligible to get Under Graduate degree with Honours only, if he/she completes the additional MOOCs courses such as Coursera certifications, or any other online courses recommended by the Institute (Equivalent to 20 credits). During Complete B.Tech. Program Guidelines for credit calculations are as follows.

- 1. For 6 to 12 Hours =0.5 Credit
- 2. For 13 to18 =1 Credit
- 3. For 19 to 24 =1.5 Credit
- 4. For 25 to 30 =2 Credit
- 5. For 31 to 35 =2.5 Credit
- 6. For 36 to 41 =3 Credit
- 7. For 42 to 47 = 3.5 Credit
- 8. For 48 and above =4 Credit

For registration to MOOCs Courses, the students shall follow Coursera registration details as per the assigned login and password by the Institute these courses may be cleared during the B. Tech degree program (as per the list provided). After successful completion of these MOOCs courses, the students shall provide their successful completion status/certificates to the Controller of Examination (COE) of the Institute through their coordinators/Mentors only.

The students shall be awarded Honours Degree as per following criterion.

- i. If he / she secures 7.50 as above CGPA.
- ii. Passed each subject of that degree program in the single attempt without any grace.
- iii. Successful completion of MOOCs based 20 credits.

Course Title	AAS0104 L T	P Credit
	Mathematical Foundations-I 3 1	0 4
linear algebra, diff with standard cond	ve: The objective of this course is to familiarize the graduate engineers wi Ferential calculus-I, differential calculus-II and vector space. It aims to equepts and tools from intermediate to advanced level that will enable them mathematics and applications that they would find useful in their discipline	uip the student to tackle mor
Pre-requisites:	Knowledge of Mathematics upto 12 th standard.	
	Course Contents / Syllabus	
UNIT-I	Matrix Algebra	8 hour
Types of Matrices:	Symmetric, Skew-symmetric and Orthogonal Matrices; Complex Matrice	es,
Inverse and Rank	of matrix using elementary transformations, System of linear equations	s, Characteristi
equation, Cayley-H Matrix.	Hamilton Theorem and its application, Eigen values and eigenvectors, Diag	gonalisation of
UNIT-II	Vector Space	10 hour
Vector spaces, bas	is, dimension, linear transformations, rank and nullity theorem, inner produ	uct spaces and
-		1
Orthogonalization.		
Orthogonalization. UNIT-III Successive Differe	Differential Calculus-I	8 hour ymptotes, Curv
UNIT-III Successive Differe	Differential Calculus-I entiation (nth order derivatives), Leibnitz theorem and itsapplication, Asy and Polar co-ordinates, Partial derivatives, Total derivative, Euler'	ymptotes, Curv
UNIT-III Successive Differe tracing: Cartesian	Differential Calculus-I entiation (nth order derivatives), Leibnitz theorem and itsapplication, Asy and Polar co-ordinates, Partial derivatives, Total derivative, Euler'	ymptotes, Curv
UNIT-III Successive Differe tracing: Cartesian homogeneous func UNIT-IV	Differential Calculus-I entiation (nth order derivatives), Leibnitz theorem and itsapplication, Asy and Polar co-ordinates, Partial derivatives, Total derivative, Euler' etions.	ymptotes, Curv s Theorem fo 8 hour
UNIT-III Successive Differe tracing: Cartesian homogeneous func UNIT-IV Taylor and Maclau	Differential Calculus-I entiation (nth order derivatives), Leibnitz theorem and itsapplication, Asy and Polar co-ordinates, Partial derivatives, Total derivative, Euler' etions. Differential Calculus-II	ymptotes, Curv s Theorem fo 8 hour imation
UNIT-III Successive Differe tracing: Cartesian homogeneous func UNIT-IV Taylor and Maclau	Differential Calculus-I entiation (nth order derivatives), Leibnitz theorem and itsapplication, Asy and Polar co-ordinates, Partial derivatives, Total derivative, Euler' etions. Differential Calculus-II urin's theorems for a function of one and two variables, Jacobians, Approximation	ymptotes, Curv s Theorem fo 8 hour imation
UNIT-III Successive Differe tracing: Cartesian homogeneous func UNIT-IV Taylor and Maclau oferrors. Maxima a UNIT-V	Differential Calculus-I entiation (nth order derivatives), Leibnitz theorem and itsapplication, Asy and Polar co-ordinates, Partial derivatives, Total derivative, Euler' etions. Differential Calculus-II urin's theorems for a function of one and two variables, Jacobians, Approximand Minima offunctions of several variables, Lagrange Method of Multiplication	ymptotes, Curv s Theorem fo 8 hour imation ers. 8 hour
UNIT-III Successive Differe tracing: Cartesian homogeneous func UNIT-IV Taylor and Maclau oferrors. Maxima a UNIT-V Simplification , Pe	Differential Calculus-I entiation (nth order derivatives), Leibnitz theorem and itsapplication, Asy and Polar co-ordinates, Partial derivatives, Total derivative, Euler' etions. Differential Calculus-II urin's theorems for a function of one and two variables, Jacobians, Approximand Minima offunctions of several variables, Lagrange Method of Multipliercentage , Profit, loss & discount , Average, Number & Series, Coding & ercentage , Profit, loss & discount , Average, Number & series, Coding &	ymptotes, Curv s Theorem for 8 hour imation ers. 8 hour decoding
UNIT-III Successive Differe tracing: Cartesian homogeneous func UNIT-IV Taylor and Maclau oferrors. Maxima a UNIT-V Simplification , Pe	Differential Calculus-I entiation (nth order derivatives), Leibnitz theorem and itsapplication, Asy and Polar co-ordinates, Partial derivatives, Total derivative, Euler' trions. Differential Calculus-II urin's theorems for a function of one and two variables, Jacobians, Approximand Minima offunctions of several variables, Lagrange Method of Multipliercentage, Profit, loss & discount, Average, Number & Series, Coding & ercentage, Profit, loss & discourt, Average, Number & Series, Coding & ecconcept of matrices to solve linear simultaneous equations and line	ymptotes, Curv s Theorem for 8 hour imation ers. 8 hour decoding
UNIT-III Successive Differe tracing: Cartesian homogeneous func UNIT-IV Taylor and Maclau oferrors. Maxima a UNIT-V Simplification , Pe Course outcom CO 1 Apply the transforma	Differential Calculus-I entiation (nth order derivatives), Leibnitz theorem and itsapplication, Asy and Polar co-ordinates, Partial derivatives, Total derivative, Euler' trions. Differential Calculus-II urin's theorems for a function of one and two variables, Jacobians, Approximand Minima offunctions of several variables, Lagrange Method of Multipliercentage, Profit, loss & discount, Average, Number & Series, Coding & ercentage, Profit, loss & discourt, Average, Number & Series, Coding & ecconcept of matrices to solve linear simultaneous equations and line	ymptotes, Curv s Theorem for 8 hour imation ers. 8 hour decoding
UNIT-III Successive Different tracing: Cartesian homogeneous funct UNIT-IV Taylor and Maclau oferrors. Maxima a UNIT-V Simplification , Per Course outcom CO 1 Apply the transforma CO 2 Explain th CO 3 Apply the problems	Differential Calculus-I entiation (nth order derivatives), Leibnitz theorem and itsapplication, Asy and Polar co-ordinates, Partial derivatives, Total derivative, Euler' etions. Differential Calculus-II urin's theorems for a function of one and two variables, Jacobians, Approximand Minima offunctions of several variables, Lagrange Method of Multipli Aptitude-I ercentage , Profit, loss & discount , Average, Number & Series, Coding & e concept of matrices to solve linear simultaneous equations and lineation. e concept of vector space, linear transformation and orthogonalization. e concept of successive differentiation and partial differentiation to sol of Leibnitz theorems and total derivatives .	ymptotes, Curv s Theorem for 8 hour imation ers. 8 hour decoding ear K ₃ K ₂

	B.TECH FIRST YEAR				
Course Code	AAS0101A L	,	Т	Р	Credit
Course Title	Engineering Physics 3		1	0	4
Course object	ive:				
1	To provide the knowledge of Relativistic Mechanics and t engineering applications.	thei	ir u	ses to	
2	To provide the knowledge of Quantum Mechanics and to expossible engineering utilization.	plo	re		
3	To provide the knowledge of interference and diffraction.				
4	To provide the knowledge of the phenomenon of semicondu uses to engineering applications.	icto	rs a	nd its	
5	To provide the basic knowledge of Optical Fiber and Laser w	whi	ch i	S	
	necessary to understand the working of modern engineering	too	ols a	nd	
	techniques.				
Pre-requisites	: Newton's laws of motions, scalar and vectors, ele	ectr	icit	y and	l magnetism,
basic laws of o	optics.				
	Course Contents / Syllabus				
UNIT-I	Relativistic Mechanics			8	hours
Frame of refer	ence, Inertial & non-inertial frames, Galilean transform	atic	ons,	Mic	helson Morley
experiment, Post	ulates of special theory of relativity, Lorentz transformations	s, L	eng	gth coi	ntraction, Time
dilation, Velocit	y addition theorem, Variation of mass with velocity, Einste	ein	's n	nass e	nergy relation,
	on between energy and momentum, Massless particle.				
	g applications(qualitative): Global positioning system (GPS),	, Aj	pli	cation	to Satellites.
UNIT-II	Quantum Mechanics				8 hours
Introduction to w	vave-particle duality, de Broglie matter waves, Phase and grou	up	velo	ocities	, Heisenberg's
• 1	iple and its applications, Wave function characteristics and si	•			
-	me- independent Schrödinger's wave equations, Particle in or				-
Theory of Quant	um excitation of the Higgs field (Higgs Boson or GOD partic	ele)	(qua	alitativ	/e).
UNIT-III	Wave Optics				10 hours
	s, Interference in uniform and wedge shaped thin films, Nec		•		-
Newton's Rings	and its applications, Fraunhofer diffraction at single slit and at	t do	oubl	e slit,	absent spectra,
-	ng, grating spectra, Rayleigh's criterion of resolution, Re	esol	lvin	g pov	ver of grating,
Optical filters.					
	Semiconductor Physics and Information Storage				6 hours
. ,	to the concept of electrical conductivity, conductivity of cond				
Fermi-Dirac pro	bability distribution function, Position of Fermi level in in	trir	nsic	semie	conductors and
extrinsic semico	nductors, variation of Fermi level with temperature (qualit	tati	ve),	Phote	ovoltaic effect,
working of a sola	ar cell on the basis of band diagrams and Applications.				

UNIT-V	Fiber Optics & Laser	8 hours
	Introduction to fiber optics, Acceptance angle, Numerical aperture, Nor	
-	of fiber, Attenuation and Dispersion in optical fibers.	manzed nequency,
	otion of radiation, Spontaneous and stimulated emission of radiation, Ein	stein's coefficients.
-	version, Ruby Laser, He-Ne Laser.	
-	ations of optical fibers and Laser (Qualitative): Laser-guided UAV (Drone)	
Course out	come: After completion of this course students will be able to):
CO 1	Solve the relativistic mechanics problems	K1,K2,K3
CO 2	Apply the concept of quantum mechanics	K1,K2,K3
CO 3	Apply the laws of optics and their application in various processes	K1,K2,K3
CO 4	Define the laws of semiconductors.	K1,K2
CO 5	Explain the working of modern engineering tools and techniques of	of K1,K2
	optical fiber and laser.

Python BasicData Structure: Sequence, Unpacking Sequences, Mutable Sequences, Lists,ListComprehension, Looping in lists, Tuples, Sets, Dictionaries

UNIT-VFile and Exception handling8 hours

Files and Directories: Introduction to File Handling in Python, Reading and Writing files, Additional file methods, Working with Directories.

Exception Handling, Errors, Run Time Errors, Handling IO Exception, Try-except statement, Raise, Assert

Searching &Sorting:Simple search & Binary search,Selection Sort, Merge Sort

Course outcome: At the end of course, the student will be able to

CO 1	Write simple python programs.	K ₂ , K ₃
CO 2	Develop python programs using decision control statements	K ₃ , K ₆
CO 3	Implement user defined functions and modules in python	K ₂
CO 4	Implement python data structures –lists, tuples, set, dictionaries	K ₃
CO 5	Perform input/output operations with files in python and implement searching, sorting and merging algorithms	K ₃ , K ₄

2.	Jurassic Park							
	Problem Description							
	Smilodon is a ferocious animal whic	ch u	sed	to liv	ve du	ring	the P	leistocene epoch (2.5 mya-
	10,000 years ago). Scientists success		-					_
	research. A park is established and th						-	e
	This park consists of Grasslands(G)							bodies(W) and it has three
	gates (situated in grasslands only). B	Belo	w is	a sar	nple	layo	out.	
	V	N	М	G	G	G	G	
		-		-	-	-	-	
	N	Ν	G	W	G	Μ	М	
	G	5	G	G	G	G	G	
	No. of Contract of	N	G	G	M	W	G	
	Before opening the park, club author	•						•
	procedure of the calculation is descri	ibed	l bel	ow. I	Pleas	e hel	lp thei	n to calculate.
	Safety Index calculation				• •	_		
	Assume a person stands on grassland						-	-
	grassland(y). If the person can escap							
	able to catch him, then the grasslar	nd(x	(x) is	call	ed sa	afe e	lse it	is unsafe. A person and a

Smilodon both take 1 second to move from one area to another adjacent area(top, bottom, left or right) but a person can move only over grasslands though Smilodon can move over grasslands and mountains.

If any grassland is unreachable for Smilodon(maybe it is unreachable for any person also), to increase safe index value Club Authority use to mark those grasslands as safe land. Explained below

W	М	G	G	G	G	
м	G	w	G(x)	М	М	
G	W	G	G(y)	G	G	
w	G(z)	w	м	W	G	

For the above layout, there is only one gate at (4,6)

Y is the position of Smilodon's cage

X is not safe area

Z is a safe area as is it not possible for smilodon to reach z

Safety index=(total grassland areas which are safe*100)/total grassland area

Constraints

i. 3<= R,C<= 10^3

ii. Gates are situated on grasslands only and at the edge of the park

iii. The cage is also situated in grassland only

iv. The position of the cage and the position of three gates are different

Input Format

The first line of the input contains two space-separated integers R and C, denoting the size of the park (R*C)

The second line contains eight space-separated integers where

First two integers represent the position of the first gate

3rd and 4th integers represent the position of second gate

5th and 6th integers represent the position of third gate respectively

The last two integers represent the position of the cage

Next R lines, each contains space separated C number of characters. These R lines represent the park layout.

Output

Safety Index accurate up to two decimal places using Half-up Rounding method

Explanation

- Example 1 Input 4 4
- 1 1 2 1 3 1 1 3 G GGG G W W M G G W W

	MGMM
	Output
	75.00
3.	Bank Compare
	Problem Description
	There are two banks; Bank A and Bank B. Their interest rates vary. You have received
	offers from both bank in terms of annual rate of interest, tenure and variations of rate of
	interest over the entire tenure.
	You have to choose the offer which costs you least interest and reject the other.
	Do the computation and make a wise choice.
	The loan repayment happens at a monthly frequency and Equated Monthly Installment
	(EMI) is calculated using the formula given below :
	EMI = loanAmount * monthlyInterestRate/(1 - 1 / (1
	+monthlyInterestRate)^(numberOfYears * 12))
	Constraints
	i. 1 <= P <= 1000000
	ii. $1 \le T \le 50$
	iii. $1 \le N1 \le 30$
	iv. $1 \le N2 \le 30$
	Input Format
	First line : P – principal (Loan Amount)
	Second line : T – Total Tenure (in years).
	Third Line : N1 is number of slabs of interest rates for a given period by Bank A. First slab
	starts from first year and second slab starts from end of first slab and so on. Next N1 line will contain the interest rate and their period.
	After N1 lines we will receive N2 viz. the number of slabs offered by second bank.
	Next N2 lines are number of slabs of interest rates for a given period by Bank B. First slab
	starts from first year and second slab starts from end of first slab and so on.
	The period and rate will be delimited by single white space.
	Output
	Your decision – either Bank A or Bank B.

	Bank B
4.	Cross Words
	Problem Description
	A crossword puzzle is a square grid with black and blank squares, containing clue numbers (according to a set of rules) on some of the squares. The puzzle is solved by obtaining the solutions to a set of clues corresponding to the clue numbers. The solved puzzle has one letter in each of the blank square, which represent a sequence of letters (consisting of one or more words in English or occasionally other languages) running along the rows (called "Across", or "A") or along the columns (called "Down" or "D"). Each numbered square is the beginning of an Across solution or a Down solution. Some of the across and down solutions will intersect at a blank square, and if the solutions are consistent, both of them will have the same letter at the intersecting square. In this problem, you will be given the specifications of the grid, and the solutions in some random order. The problem is to number the grid appropriately, and associate the answers consistently with the clue numbers on the grid, both as Across solutions and as Down solutions, so that the intersecting blank squares have the same letter in both solutions.
	 Rules for Clue Numbering The clue numbers are given sequentially going row wise (Row 1 first, and then row2 and so on) Only blank squares are given a clue number A blank square is given a clue number if either of the following conditions exist (only one
	number is given even if both the conditions are satisfied) It has a blank square to its right, and it has no blank square to its left (it has a black square to its left, or it is in the first column). This is the beginning of an Across solution with that
	number It has a blank square below it, and no blank square above it (it has a black square above it or it is in the first row). This is the beginning of a Down solution with that number
	Constraints i. 5<=N<=15 ii. 5<=M<=50
	Input Format
	The input consists of two parts, the grid part and the solution part The first line of the grid part consists of a number, N, the size of the grid (the overall grid is N x N) squares. The next N lines correspond to the N rows of the grid. Each line is comma separated, and has number of pairs of numbers, the first giving the position (column) of the beginning of a black square block, and the next giving the length of the block. If there are no black squares in a row, the pair "0,0" will be specified. For example,
	if a line contains "2,3,7,1,14,2", columns 2,3,4 (a block of 3 starting with 2), 7 (a block of 1 starting with 7) and 14,15 (a block of 2 starting with 14) are black in the corresponding

row.

The solution part of the input appears after the grid part. The first line of the solution part contains M, the number of solutions. The M subsequent lines consist of a sequence of letters corresponding to a solution for one of the Across and Down clues. All solutions will be in upper case (Capital letters)

Output

The output is a set of M comma separated lines. Each line corresponds to a solution, and consists of three parts, the clue number, the letter A or D (corresponding to Across or Down) and the solution in to that clue (in upper case)

The output must be in increasing clue number order. If a clue number has both an Across and a Down solution, they must come in separate lines, with the Across solution coming before the Down solution.

Skateboard
Problem Description
The amusement park
skating surface is a gri

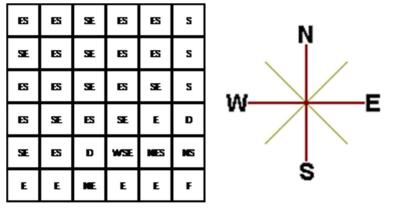

5.

The amusement park at Patagonia has introduced a new skateboard competition. The
skating surface is a grid of N x N squares. Most squares are so constructed with slopes that
it is possible to direct the skateboard in any of up to three directions of the possible four
(North ,East, South or West, represented by the letters N, E, S and W respectively). Some
squares however have a deep drop from the adjacent square from which it is impossible to

go to any adjacent square. These are represented by D (for Drop) in that square. The objective is to maneuver the skateboard to reach the South East corner of the grid, marked F.

Each contestant is given a map of the grid, which shows where the Drop squares are (marked D), where the Final destination is (marked F), and, for each other square, the directions it is possible to maneuver the skateboard in that square.

The contestant draws lots to determine which of the squares on the boundaries of the grid on the North or the West of the grid (the top or the left in the diagram) he or she should start in. Then, using a map of the grid, he or she needs to try to reach the South East corner destination by maneuvering the skateboard.

In some cases, it is impossible to reach the destination. For example, in the diagram above, if one starts at the North East corner (top right in the diagram), the only way is to go is South, until the Drop square is reached (three squares South), and the contestant is stuck there.

A contestant asks you to figure out the number of squares at the North or West boundary (top or left boundary in the map) from which it is feasible to reach the destination.

Constraints

i. 5<=N<=50

Input Format

The first line of the input is a positive integer N, which is the number of squares in each side of the grid.

The next N lines have a N strings of characters representing the contents of the map for that corresponding row. Each string may be F, representing the Final destination, D, representing a drop square, or a set of up to three of the possible four directions (N,E,S,W) in some random order. These represent the directions in which the contestant can maneuver the skateboard when in that square.

Output

The output is one line with the number of North or West border squares from which there is a safe way to maneuver the skateboard to the final destination.

6.	Chakravyuha
	Problem Description
	During the battle of Mahabharat, when Arjuna was far away in the battlefield, Guru Drona
	made a Chakravyuha formation of the Kaurava army to capture YudhisthirMaharaj.
	Abhimanyu, young son of Arjuna was the only one amongst the remaining Pandava army
	who knew how to crack the Chakravyuha. He took it upon himself to take the battle to the
	enemies.
	Abhimanyu knew how to get power points when cracking the Chakravyuha. So great was
	his prowess that rest of the Pandava army could not keep pace with his advances. Worried
	at the rest of the army falling behind, YudhisthirMaharaj needs your help to track of
	Abhimanyu's advances. Write a program that tracks how many power points Abhimanyu
	has collected and also uncover his trail
	A Chakravyuha is a wheel-like formation. Pictorially it is depicted as below
	Fig 1. Chakravyuha
	A Chakravyuha has a very well-defined co-ordinate system. Each point on the co-ordinate
	system is manned by a certain unit of the army. The Commander-In-Chief is always
	located at the centre of the army to better co-ordinate his forces. The only way to crack the
	Chakravyuha is to defeat the units in sequential order.
	A Sequential order of units differs structurally based on the radius of the Chakra. The
	radius can be thought of as length or breadth of the matrix depicted above. The structure
	i.e. placement of units in sequential order is as shown below

	1	2	3	4	5
	16	17	18	19	6
	15	24	25	20	1
	14	23	22	21	8
0	13	12	11	10	9

Fig 2. Army unit placements in Chakravyuha of size 5

The entry point of the Chakravyuha is always at the (0,0) co-ordinate of the matrix above. This is where the 1st army unit guards. From (0,0) i.e. 1st unit Abhimanyu has to march towards the center at (2,2) where the 25th i.e. the last of the enemy army unit guards. Remember that he has to proceed by destroying the units in sequential fashion. After destroying the first unit, Abhimanyu gets a power point. Thereafter, he gets one after destroying army units which are multiples of 11. You should also be a in a position to tell YudhisthirMaharaj the location at which Abhimanyu collected his power points.

Input Format:

First line of input will be length as well as breadth of the army units, say N

Output Format:

- Print NxN matrix depicting the placement of army units, with unit numbers delimited by (\t) Tab character
- Print Total power points collected
- Print coordinates of power points collected in sequential fashion (one per line)
- Constraints: $0 < N \leq 100$

9.	ISL Schedule			
	Problem Desc	ription		
	The Indian So	ccer League (IS	L) is an annual football tournament.	
	The group stag	ge of ISL featur	res N teams playing against each other with fol	lowing set of
	rules:			
	i.	N teams play ag	gainst each other twice - once at Home and once	e Away
	ii.	A team can pla	y only one match per day	
	iii.	A team cannot	play matches on consecutive days	
	iv.	A team cannot	play more than two back to back Home or Awa	y matches
	v.	Number of mat	ches in a day has following constraints	
		a. The ma	tch pattern that needs to be followed is -	
		•	Day 1 has two matches and Day 2 has one matc	h,
		•	Day 3 has two matches and Day 4 has one matc	h and so on
		b. There c	an never be 3 or more matches in a day	
	vi.	Gap between tw	wo successive matches of a team cannot exceed	floor(N/2)
		days where floo	or is the mathematical function floor()	
	vii.	Derby Matches	s (any one)	
		a. At least	half of the derby matches should be on weeken	d
		b. At least	half of the weekend matches should be derby n	natches
	Your task is to	generate a sche	edule abiding to above rules.	
	Input Format		-

				1 7 (position of B)				
				(->) count is 24. So final answer will be 24. No other route				
				longer than this one is possible in this matrix.				
	2	2 2	-1	No path is possible in this 2*2 matrix so answer is -1				
		1						
		0 0						
		11						
		0 0						
11.	Min Pro	duct ar	ray					
	Problem		-					
	The task	The task is to find the minimum sum of Products of two arrays of the same size, given that						
	k modifie	cations a	re allowed	l on the first array. In each modification, one array element of				
	the first a	array can	either be	increased or decreased by 2.				
	Note- the	e produc	t sum is Su	ummation (A[i]*B[i]) for all i from 1 to n where n is the size of				
	both arra	ys						
	Input Fo	ormat:						
		i. Fi	rst line of	the input contains n and k delimited by whitespace				
		ii. Se	cond line	contains the Array A (modifiable array) with its values				
		de	limited by	spaces				
	i	ii. Tł	nird line co	ontains the Array B (non-modifiable array) with its values				

delimited by spaces

Output Format:

Output the minimum sum of products of the two arrays

Constraints:

- i. $1 \le N \le 10^{5}$
- ii. $0 \le |A[i]|, |B[i]| \le 10^{5}$
- iii. $0 \le K \le 10^{9}$

Sample Input and Output

S.No.	Input	Output	
1	3 5	-31	
	12-3		
	-2 3 -5		
2	53	25	
	23454		
	3 4 2 3 2		

Explanation for sample 1:

12.

Here total numbers are 3 and total modifications allowed are 5. So we modified A[2], which is -3 and increased it by 10 (as 5 modifications are allowed). Now final sum will be (1 * -2) + (2 * 3) + (7 * -5)-2+6-35-31 -31 is final answer. **Explanation for sample 2:** Here total numbers are 5 and total modifications allowed are 3. So we modified A[1], which is 3 and decreased it by 6 (as 3 modifications are allowed). Now final sum will be (2 * 3) + (-3 * 4) + (4 * 2) + (5 * 3) + (4 * 2)6 - 12 + 8 + 15 + 825 25 is final answer. **Consecutive Prime Sum Problem Description** Some prime numbers can be expressed as a sum of other consecutive prime numbers. For example, 5 = 2 + 3, 17 = 2 + 3 + 5 + 7, 41 = 2 + 3 + 5 + 7 + 11 + 13. Your task is to find

out how many prime numbers which satisfy this property are present in the range 3 to N subject to a constraint that summation should always start with number 2. Write code to find out the number of prime numbers that satisfy the above-mentioned

property in a given range.

UNIT-V	Logic and Argumentation	8 HOURS
The argument,	claim, and statement, identifying premises and conclusion, truth and logic	c conditions,
valid/invalid a	rguments, strong/weak arguments, deductive argument, argument diagr	ams, logical
reasoning, scie	entific reasoning, logical fallacies, propositional logic, probability, an	d judgment,
obstacles to cri	tical thinking. Group activity/role plays on evaluating arguments	
Course outc	ome: After completion of this course, students will be able to	
CO 1	Develop a strong understanding of the design process and apply it in a variety of business settings	K2,K3
CO 2	Analyze self, culture, teamwork to work in a multidisciplinary environment and exhibit empathetic behavior	K3
CO 3	Formulate specific problem statements of real time issues and generate innovative ideasusing design tools	K3,K6
CO 4	Apply critical thinking skills in order to arrive at the root cause from a set of likely causes	K3
CO 5	Demonstrate an enhanced ability to apply design thinking skills for evaluation of claims and arguments	K3,K4

	B.TECH FIRST YEAR(Foreign La	nguage)	
Course Code	e AASL0202	LTP	Credit
Course Title	2 0 0	02	
Course obje	ctive:		
1	An introduction to French language and c learn to understand and articulate in day t situations.		11
2	The course provides a foundation in the f LSRW (Listening, Speaking, Reading, an language learning.		
Pre-requisite	2:		
• The stu	ident should be able to communicate in English	1.	
	Course Contents / Syllabus		
UNIT-I	Introduction to French	7 H	lours
>> Basic g	greetings and introductions		
-	ences and similarities between English and Free	nch alphabets	
≫ Recog	nize and spell simple words and phrases in Fre	nch	
≻ Comm	only used nouns and adjectives		
UNIT-II	Vocabulary Building		8 Hours
≫ Introdı	ice oneself and others		
➤ Identif	y, speak and understand the days of the week/ 1	months/ seasons/c	olours
≫ Speak	and understand simple weather expressions		
>> Unders	tand, ask and answer about date of birth/ impo	rtant dates and ag	e
➤ Identif	y, understand and write numbers from $1-60$		
	e masculine and feminine of regular nouns and rouge/ sympa)	adjectives (petit/	grand/
		÷	

> In the city/ naming places and buildings > Means of transport / basic directions > Listen to, understand, and respond to everyday conversation > Respond to questions about ourselves and family members > Use the singular and plural of regular nouns (-s). **UNIT-IV** Reading **10 Hours** > Food, drink, groceries and meal > Everyday life/ telling time > Making appointments \gg Use definite and indefinite articles. **UNIT-V** Writing 8 Hours > Fill in a simple form (fiched'inscription/ carte d'identité) > Describe pictures (Speak and Write) > Write a short text on oneself **Course outcome** At the end of the course students will be able to CO 1 Recognize the basic sounds, letters, numbers, words and phrases of French. Develop basic French vocabulary CO 2 CO 3 Use simple phrases in real life conversations Read simple sentences CO 4 Write simple sentences and fill in a form CO 5

	B.TECH FIRST YEAR (Foreign Language)		
Course Code	AASL0203	L T P	Credit
Course Title	German	200	02
Course objec	tive:	I	1
1	An introduction to German language and culture. Students will learn to understand and articulate in day to day real-life situations.		
2	The course provides a foundation in the four basic skills LSRW (Listening, Speaking, Reading, and Writing) of language learning.		
Pre-requisite The stud	s: ent should be able to communicate in basic English.		
	Course Contents / Syllabus		
UNIT-I	Introduction to German	5 H	lours
➢ Introduc	ing ourselves and others,		
≫ Gramma	r: W questions,		
➤ personal	pronouns,		
\gg simple s	entence,		
\gg verb con	jugation		
UNIT-II	Vocabulary building		6 Hours
➤ Vocabul	ary building – the alphabet,		
> hobbies,			
>> numbera	s, months, seasons		
≫ Gramma	r : articles, singular and plural forms		
UNIT-III	Everyday common simple sentences	4	5 Hours
means of transp Grammar: defin	ing places and buildings, oort, basic directions hite and indefinite articles; and nicht; imperative	1	
UNIT-IV	Reading		7 Hours
		L	

Grammar: th Everyday life Grammar: p	amily / groceries and meals e accusative e, telling time, making appointments repositions am, um, von. bis; modal verbs, possessive articles re activity, celebrations		
	eparable verbs, the accusative, past tense of to have and to be		
UNIT-V	Writing	7	Hours
Grammar: da A short text Grammar: ch Professions Grammar: p Clothes Heal Grammar: pe	about oneself. anging prepositions		
Course ou At the end of	tcome: The course students will be able to		
CO 1	Understand and be familiar with basic German and the culture		
CO 2	Recognise the foundational vocabulary		
CO 3	Use simple phrases in everyday conversations		
CO 4	Read simple sentences		
CO 5	Write simple sentences		
Text book	8

Lab Title	Problem Solving using Advanced Python Lab0 0		1	
Course o	utcome: At the end of course, the student will be abl	e to		
CO 1	Write programs to create classes and instances in pythonK1, K3			
CO 2	write programs to Implement concept of inheritance and K_2, K_3 polymorphism using python			
CO 3Write programs using functional programming in pythonK4				
CO 4	CO 4write programs to create GUI based Python applicationK3, K4			
CO 5 Developing real life applications using python libraries to solve K ₄ , K ₆ real world problems				

List of Experiment :

S.No.	Name of Experiment
	Class and Methods
1	Python program to demonstrate instantiating a class.
2	Python program to demonstrate use of class method and static method
3	Python program to implement constructors.
4	Python program to show that the variables with a value assigned in the class
	declaration, are class variables and variables inside methods and constructors are
	instance variables.
5	Python program to create Bank-account class with deposit, withdraw function
	Inheritance
6	Python program to demonstrate single inheritance
7	Python program to demonstrate multilevel inheritance
8	Python program to demonstrate multiple inheritance
9	Python program to demonstrate hierarchical inheritance
10	Python program to demonstrate hybrid inheritance
	Polymorphism
11	Python program to demonstrate in-built polymorphic function
12	Python program to demonstrate user defined polymorphic functions
13	Python program to demonstrate method overriding
	Functional Programming
14	Python program to demonstrate working of map
15	Python program to demonstrate working of filter
16	Python program to demonstrate working of reduce
17	Python program to demonstrate immutable data types
18	Python program to demonstrate Monkey Patching in Python

19	Python program to demonstrate decorators with parameters in python
20	Python program to demonstrate conditional decorators
21	Python program to demonstrate nested decorators
22	Python program to demonstrate chain multiple decorators
23	Python program to demonstrate use of generators
24	Python program to demonstrate working of iterators
25	Write a Python program to create a table and insert some records in that table.
	Finally selects all rows from the table and display the records.
	GUI Programming
26	Python Program to understand working of various Tkinter widgets
27	Create a Distance-time GUI calculator using Tkinter
28	Write a NumPy program to calculate the difference between the maximum and
	the minimum values of a given array along the second axis.
29	Write a Python program to create a 2-D array with ones on the diagonal and zeros
	elsewhere. Now convert the NumPy array to a SciPy sparse matrix in CSR
	format.
30	Write a Python program to add, subtract, multiple and divide two Pandas Series.
31	Write a program to Create Your Plot using python. Also add and delete axes.
32	Write a program to plot data using seaborn and show the plot.

		Suggested list of Experiment	ts				
		(At least 10 experiments to be perf	ormed)				
Sr. No.	Name of Experiments						
1	To perform facing, turning, taper turning, knurling, grooving and threading						
	operations as per given drawing on lathe machine.						
2	To prepare a T-Shape and U-shape work piece by filing, sawing, drilling in						
	Fitting shop.						
3	To cast a component using a single piece pattern in foundry shop,						
4	To study the G-M Codes for CNC machine and to perform different machining						
	operations including facing, turning, grooving etc on CNC lathe.						
5	To cut a slot on CNC milling machine as per given drawing.						
6	To make a hole of given diameter on CNC drilling machine.						
7	To study construction and working of FDM 3D printing machine.						
8	To study construction and working of SLA 3D printing machine.						
9	To study the development of drawings using 3D scanner.						
10	To make an air tight bottle cap by using injection moulding.						
11	. To study construction and working of six axis robot (KUKA Sim Pro 3.0.4).						
12	Practice on pneumatic control system using single acting cylinder.
