PLEASE NOTE:-

• Internship (3-4 weeks) shall be conducted during summer break after II semester and will be assessed during III semester

Abbreviation Used:-

L: Lecture, T: Tutorial, P: Practical, CT: Class Test, TA: Teacher Assessment, PS: Practical Sessional, TE: Theory End Semester Exam., PE: Practical End Semester Exam.

AICTE Guidelines in Model Curriculum:

A student will be eligible to get Under Graduate degree with Honours only, if he/she completes the additional MOOCs courses such as Coursera certifications, or any other online courses recommended by the Institute (Equivalent to 20 credits). During Complete B.Tech. Program Guidelines for credit calculations are as follows.

- 1. For 6 to 12 Hours =0.5 Credit
- 2. For 13 to18 =1 Credit
- 3. For 19 to 24 =1.5 Credit
- 4. For 25 to 30 =2 Credit
- 5. For 31 to 35 =2.5 Credit
- 6. For 36 to 41 =3 Credit
- 7. For 42 to 47 =3.5 Credit
- 8. For 48 and above =4 Credit

For registration to MOOCs Courses, the students shall follow Coursera registration details as per the assigned login and password by the Institute these courses may be cleared during the B. Tech degree program (as per the list provided). After successful completion of these MOOCs courses, the students shall provide their successful completion status/certificates to the Controller of Examination (COE) of the Institute through their coordinators/Mentors only.

The students shall be awarded Honours Degree as per following criterion.

- i. If he / she secures 7.50 as above CGPA.
- ii. Passed each subject of that degree program in the single attempt without any grace.
- iii. Successful completion of MOOCs based 20 credits.

	B. TECH FIRST YEAR					
Course Code	AAS0104	L	Т	Р	Cre	dit
Course Title	Mathematical Foundations - I	3	1	0	4	
Course object	ive: The objective of this course is to familiarize the	e gi	adua	ate er	gine	ers with
techniques in line	ar algebra, differential calculus-I, differential calculus-II a	and	vect	or spa	ice. It	aims to
	s with standard concepts and tools from intermediate t					
enable them to ta useful in their dise	ackle more advanced level of mathematics and applicat ciplines.	tion	s tha	at the	y wo	uld find
	Knowledge of Mathematics upto 12 th standard.					
_	Course Contents / Syllabus					
UNIT-I	Matrix Algebra				8	hours
Types of Matrices	s: Symmetric, Skew-symmetric and Orthogonal Matrices;	Co	mple	x Ma	trices	,
Inverse and Ra	nk of matrix using elementary transformations,Syst	tem	of	linea	ır eq	uations,
Characteristic ed	quation, Cayley-Hamilton Theorem and its applica	atior	n, E	ligen	valu	es and
eigenvectors, Dia	gonalisation of a Matrix.					
UNIT-II	Vector Space				10	hours
Vector spaces, ba	sis,dimension, linear transformations, rank and nullity the	eorei	n, in	ner p	roduc	t
spaces and Orthog	gonalization.					
UNIT-III	Differential Calculus-I				8	hours
Successive Differ	entiation (nth order derivatives), Leibnitz theorem and it	ts ap	plic	ation,	Asyı	nptotes,
Curve tracing: (Cartesian and Polar co-ordinates, Partial derivatives,	To	tal c	leriva	tive,	Euler's
Theorem for hom	ogeneous functions.					
UNIT-IV	Differential Calculus-II				8	hours
Taylor and Macla	urin's theorems for a function of one and two variables, J	acol	oians	s, App	oroxir	nation
oferrors. Maxima	and Minima of functions of several variables, Lagrange M	Metł	nod o	of Mu	ltiplie	ers.
UNIT-V	Aptitude-I				8	hours
Simplification ,	Percentage, Profit, loss & discount, Average, Nur	nbe	r &	Serie	s, Co	oding &
decoding						
Course outcom	ne: After completion of this course students are a	ble	to:			
CO 1 Apply th transform	e concept of matrices to solve linear simultaneous equation.	uati	onsa	nd lii	near	K3
CO 2 Explain t	he concept of vector space, linear transformation and orth	nogo	naliz	zation		K ₂
CO 3 Apply th			atior	to so	olve	K ₃
	e concept of successive differentiation and partial differ	enti				
problems	of Leibnitz theorems and total derivatives .					
problems						K ₃
CO 4 Apply pa	of Leibnitz theorems and total derivatives .	s an	d Jao	cobiar		K3 K3

	B.TECH FIRST YEAR		
Course Code	AEC0101	L T P	Credits
Course Title	Basic Electrical and Electronics Engineering	3 1 0	4
Course obje	ctive:		
	 To provide the basics of DC and AC analysis of (Selectrical circuits. To study the basics of transformer and calculate its of To impart elementary knowledge of Power System Energy Consumption. To provide the knowledge of Diode, Display devices, application. 	efficiency. 1 Compone	nts, Earthing, and
Pre-requisite	es: Basic knowledge of 12th Physics and Mathematics		
	Course Contents / Syllabus		
UNIT-I	D.C CIRCUIT ANALYSIS AND NETWORK THEORI	EMS	10
	Concept of network, Active and passive elements, vol current sources, concept of linearity and linear network, and bilateral elements, source transformation, Kirchoff's L and nodal methods of analysis, star delta transformation, theorems: Superposition theorem, Thevenin's theorem, theorem, maximum power transfer theorem.	unilateral Law: loop network	
UNIT-II	STEADY STATE ANALYSIS OF AC CIRCUIT		10
	Single phase AC circuit: AC fundamentals, concept of phasor representation of sinusoidally varying voltage and analysis of series and parallel RLC circuits, j-notation, types of power, power factor, resonance in series and circuits. Three phase AC circuit: Advantages of three phase	l current, Different l parallel	
	voltage and current relations in star and delta connections.		
UNIT-III	SINGLE PHASE TRANSFORMER AND ELEMEN POWER SYSTEM Single Phase Transformer: Principle of operation, con EMF equation, equivalent circuit, losses and efficiency. Introduction to Elements of Power System: General Power system, Components of Distribution system: Swi Unit (SFU), MCB, ELCB, MCCB, Importance of Elementary calculations for energy consumption, Battery B	struction, layout of itch Fuse Earthing,	09

UNIT-I	 SEMICONDUCTOR DIODE AND THEIR APPLICATIONS Introduction of Semiconductors: Intrinsic and Extrinsic, P-N Junction Diode: Depletion layer, V-I characteristics, Half and Full Wave rectification, Clippers, Breakdown Mechanism: Zener and Avalanche, Zener Diode as Shunt Regulator. Display Devices Liquid Crystal Display (LCD), Light Emitting Diode (LED), Organic-Light Emitting Diode (O-LED), 7- segment display. 	10
UNIT-V	 OPERATIONAL AMPLIFIERS Introduction, Op-Amp Basic, Practical Op-Amp Circuits (Inverting Amplifier, Noninverting Amplifier, Summing Amplifier, Integrator, Differentiator). Electronic Instrumentation 	09
Course	outcome: After successful completion of this course students will Apply the principle of KVL/KCL and network theorems for analysi	
	D.C circuit.	
CO 2	Analyze the steady state behavior of single phase and three phase AC electric circuits.	rical
CO 3	Illustrate and analyze the working principles of a single phase transform	
CO 4	efficiency, and components of Power system, Earthing, and energy calculat Explain the construction, working principle, and application of PN junc diode, Zener diode and Display devices.	ction
CO 5	Explain the concept of Op-Amp, Digital multimeter, Sensors,IoT and applications.	1 its

	<i>File and Exception handling</i>	8 hours
Additiona Exception statement,	Directories: Introduction to File Handling in Python, Reading and l file methods, Working with Directories. Handling, Errors, Run Time Errors, Handling IO Exception Raise, Assert & Sorting:Simple search & Binary search, Selection Sort, Merge Sort	
Course a	outcome: At the end of course, the student will be able t	to
CO 1	Write simple python programs.	<i>K</i> ₂ , <i>K</i> ₃
<i>CO 2</i>	Develop python programs using decision control statements	K ₃ , K ₆
<i>CO 3</i>	Implement user defined functions and modules in python	<i>K</i> ₂
<i>CO</i> 4	Implement python data structures –lists, tuples, set, dictionaries	<i>K</i> ₃
<i>CO</i> 5	Perform input/output operations with files in python and implement searching, sorting and merging algorithms	<i>K</i> ₃ , <i>K</i> ₄

	Example 1											
	Input											
	carrace											
	3											
	L 2											
	R 2											
	L 3											
	Output											
	NO											
	Explanation											
	After applying all the rotations, the FIRSTCHARSTRING string will be "rcr" which is not											
	anagram of any sub string of origi	nal st	ring	"carr	ace"							
•	Jurassic Park											
	Problem Description											
	Smilodon is a ferocious animal w	hich ı	ısed	to liv	ve du	iring	the P	leistocene epoch (2.5 mya				
	10,000 years ago). Scientists succ	essfu	lly c	reate	d fev	v sm	ilodor	ns in an experimental DNA				
	research. A park is established and	l thos	e sm	ilodo	ons a	re ke	ept in a	a cage for visitors.				
	This park consists of Grasslands(G), N	loun	tains	(M)	and	Water	bodies(W) and it has thre				
	gates (situated in grasslands only)	. Belc	w is	a sa	mple	layo	out.					
		w	NA	G	G	G	C					
		vv	M	0	G	G	G					
		М	G	W	G	М	М					
		C	C	C	C	c	C					
		G	G	G	G	G	G					
		W	G	G	M	W	G					
	Before opening the park, club authority decides to calculate Safety index of the park. The											
	procedure of the calculation is described below. Please help them to calculate.											
	Safety Index calculation											
	Assume a person stands on grassla	and(x) and	d a Si	milo	don (escape	s from the cage situated o				
	grassland(y). If the person can es											
	able to catch him, then the grassland(x) is called safe else it is unsafe. A person and a Smilodon both take 1 second to move from one area to another adjacent area(top, bottom, $x = 1$).											
ĺ	SHIHOQOH DOLIH LAKE I SECOND IO H		rom	one	area	to a	nother	adjacent area(top. botton				

grasslands and mountains.

If any grassland is unreachable for Smilodon(maybe it is unreachable for any person also), to increase safe index value Club Authority use to mark those grasslands as safe land. Explained below

For the above layout, there is only one gate at (4,6)

Y is the position of Smilodon's cage

X is not safe area

Z is a safe area as is it not possible for smilodon to reach z

Safety index=(total grassland areas which are safe*100)/total grassland area

Constraints

i. 3<= R,C<= 10^3

- ii. Gates are situated on grasslands only and at the edge of the park
- iii. The cage is also situated in grassland only
- iv. The position of the cage and the position of three gates are different

Input Format

The first line of the input contains two space-separated integers R and C, denoting the size of the park (R^*C)

The second line contains eight space-separated integers where

First two integers represent the position of the first gate

3rd and 4th integers represent the position of second gate

5th and 6th integers represent the position of third gate respectively

The last two integers represent the position of the cage

Next R lines, each contains space separated C number of characters. These R lines represent the park layout.

Output

Safety Index accurate up to two decimal places using Half-up Rounding method

Explanation

Example 1
Input
4 4
11213113
G GGG
GWWM
GGWW
MGMM
Output

	75.00
3.	Bank Compare
	Problem Description
	There are two banks; Bank A and Bank B. Their interest rates vary. You have received
	offers from both bank in terms of annual rate of interest, tenure and variations of rate of
	interest over the entire tenure.
	You have to choose the offer which costs you least interest and reject the other.
	Do the computation and make a wise choice.
	The loan repayment happens at a monthly frequency and Equated Monthly Installment
	(EMI) is calculated using the formula given below :
	EMI = loanAmount * monthlyInterestRate/(1 - 1 / (1
	+monthlyInterestRate)^(numberOfYears * 12))
	Constraints
	i. $1 \le P \le 1000000$
	ii. $1 \le T \le 50$ iii. $1 \le N1 \le 30$
	iv. $1 \le N2 \le 30$
	Input Format
	First line : P – principal (Loan Amount)
	Second line : T – Total Tenure (in years).
	Third Line : N1 is number of slabs of interest rates for a given period by Bank A. First slab
	starts from first year and second slab starts from end of first slab and so on.
	Next N1 line will contain the interest rate and their period.
	After N1 lines we will receive N2 viz. the number of slabs offered by second bank.
	Next N2 lines are number of slabs of interest rates for a given period by Bank B. First slab
	starts from first year and second slab starts from end of first slab and so on.
	The period and rate will be delimited by single white space.
	Output
	Your decision – either Bank A or Bank B.
	Explanation
	Example 1
	Input

	5 9.5
	10 9.6
	5 8.5
	3
	10 6.9
	5 8.5
	5 7.9

	Output
	Bank B
4.	Cross Words
	Problem Description
	A crossword puzzle is a square grid with black and blank squares, containing clue
	numbers (according to a set of rules) on some of the squares. The puzzle is solved by obtaining the solutions to a set of clues corresponding to the clue numbers.
	The solved puzzle has one letter in each of the blank square, which represent a sequence of letters (consisting of one or more words in English or occasionally other languages) running along the rows (called "Across", or "A") or along the columns (called "Down" or "D"). Each numbered square is the beginning of an Across solution or a Down solution.
	Some of the across and down solutions will intersect at a blank square, and if the solutions
	are consistent, both of them will have the same letter at the intersecting square. In this problem, you will be given the specifications of the grid, and the solutions in some random order. The problem is to number the grid appropriately, and associate the answers consistently with the clue numbers on the grid, both as Across solutions and as Down solutions, so that the intersecting blank squares have the same letter in both solutions. Rules for Clue Numbering
	-
	The clue numbers are given sequentially going row wise (Row 1 first, and then row2 and so on)
	Only blank squares are given a clue number
	A blank square is given a clue number if either of the following conditions exist (only one
	number is given even if both the conditions are satisfied)
	It has a blank square to its right, and it has no blank square to its left (it has a black square to its left, or it is in the first column). This is the beginning of an Across solution with that number
	It has a blank square below it, and no blank square above it (it has a black square above it or it is in the first row). This is the beginning of a Down solution with that number
	Constraints
	i. $5 \le N \le 15$ ii. $5 \le M \le 50$
	Input Format
	The input consists of two parts, the grid part and the solution part
	The first line of the grid part consists of a number, N, the size of the grid (the overall grid
	is N x N) squares. The next N lines correspond to the N rows of the grid. Each line is
	comma separated, and has number of pairs of numbers, the first giving the position (column) of the beginning of a black square block, and the next giving the length of the
	block. If there are no black squares in a row, the pair "0,0" will be specified. For example,
	if a line contains "2,3,7,1,14,2", columns 2,3,4 (a block of 3 starting with 2), 7 (a block of 1 starting with 7) and 14,15 (a block of 2 starting with 14) are black in the corresponding
	row. The solution part of the input appears after the grid part. The first line of the solution part

contains M, the number of solutions. The M subsequent lines consist of a sequence of letters corresponding to a solution for one of the Across and Down clues. All solutions will be in upper case (Capital letters)

Output

The output is a set of M comma separated lines. Each line corresponds to a solution, and consists of three parts, the clue number, the letter A or D (corresponding to Across or Down) and the solution in to that clue (in upper case)

The output must be in increasing clue number order. If a clue number has both an Across and a Down solution, they must come in separate lines, with the Across solution coming before the Down solution.

Skateboard
Problem Description
The amusement park at P
skating surface is a grid of l
it is possible to direct the s

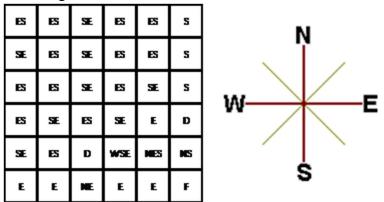

5.

The amusement park at Patagonia has introduced a new skateboard competition. The skating surface is a grid of N x N squares. Most squares are so constructed with slopes that it is possible to direct the skateboard in any of up to three directions of the possible four (North ,East, South or West, represented by the letters N, E, S and W respectively). Some squares however have a deep drop from the adjacent square from which it is impossible to go to any adjacent square. These are represented by D (for Drop) in that square. The objective is to maneuver the skateboard to reach the South East corner of the grid, marked

F.

Each contestant is given a map of the grid, which shows where the Drop squares are (marked D), where the Final destination is (marked F), and, for each other square, the directions it is possible to maneuver the skateboard in that square.

The contestant draws lots to determine which of the squares on the boundaries of the grid on the North or the West of the grid (the top or the left in the diagram) he or she should start in. Then, using a map of the grid, he or she needs to try to reach the South East corner destination by maneuvering the skateboard.

In some cases, it is impossible to reach the destination. For example, in the diagram above, if one starts at the North East corner (top right in the diagram), the only way is to go is South, until the Drop square is reached (three squares South), and the contestant is stuck there.

A contestant asks you to figure out the number of squares at the North or West boundary (top or left boundary in the map) from which it is feasible to reach the destination.

Constraints

i. 5<=N<=50

Input Format

The first line of the input is a positive integer N, which is the number of squares in each side of the grid.

The next N lines have a N strings of characters representing the contents of the map for that corresponding row. Each string may be F, representing the Final destination, D, representing a drop square, or a set of up to three of the possible four directions (N,E,S,W) in some random order. These represent the directions in which the contestant can maneuver the skateboard when in that square.

Output

The output is one line with the number of North or West border squares from which there is a safe way to maneuver the skateboard to the final destination.

Write a program that tracks how many power points Abhiman has collected and also uncover his trail		who knew how to crack the Chakravyuha. He took it upon himself to take the battle to the
at the rest of the army falling behind, YudhisthirMaharaj needs your help to track Abhimanyu's advances. Write a program that tracks how many power points Abhimar has collected and also uncover his trail		Abhimanyu knew how to get power points when cracking the Chakravyuha. So great was
Abhimanyu's advances. Write a program that tracks how many power points Abhimat has collected and also uncover his trail		his prowess that rest of the Pandava army could not keep pace with his advances. Worried
A Chakravyuha is a wheel-like formation. Pictorially it is depicted as below		at the rest of the army falling behind, YudhisthirMaharaj needs your help to track of Abhimanyu's advances. Write a program that tracks how many power points Abhimanyu has collected and also uncover his trail
		A Chakravyuha is a wheel-like formation. Pictorially it is depicted as below
Fig 1. Chakravyuha		Fig 1. Chakravyuha
A Chakravyuha has a very well-defined co-ordinate system. Each point on the co-ordin		A Chakravyuha has a very well-defined co-ordinate system. Each point on the co-ordinate
		system is manned by a certain unit of the army. The Commander-In-Chief is always
		located at the centre of the army to better co-ordinate his forces. The only way to crack the
Chakravyuha is to defeat the units in sequential order.		
		A Sequential order of units differs structurally based on the radius of the Chakra. The
		radius can be thought of as length or breadth of the matrix depicted above. The structure
i.e. placement of units in sequential order is as shown below		

1	2	3	4	5
16	17	18	19	6
15	24	25	20	1
14	23	22	21	8
13	12	11	10	9

Fig 2. Army unit placements in Chakravyuha of size 5

The entry point of the Chakravyuha is always at the (0,0) co-ordinate of the matrix above. This is where the 1st army unit guards. From (0,0) i.e. 1st unit Abhimanyu has to march towards the center at (2,2) where the 25th i.e. the last of the enemy army unit guards. Remember that he has to proceed by destroying the units in sequential fashion. After destroying the first unit, Abhimanyu gets a power point. Thereafter, he gets one after destroying army units which are multiples of 11. You should also be a in a position to tell YudhisthirMaharaj the location at which Abhimanyu collected his power points.

Input Format:

First line of input will be length as well as breadth of the army units, say N

Output Format:

- Print NxN matrix depicting the placement of army units, with unit numbers delimited by (\t) Tab character
- Print Total power points collected
- Print coordinates of power points collected in sequential fashion (one per line)
- Constraints: $0 < N \leq 100$

	k modifi	cations a	re allowed	l on the first array. In each modification, one array element of
	the first a	array car	either be	increased or decreased by 2.
		•		ummation (A[i]*B[i]) for all i from 1 to n where n is the size of
	both arra			
	Input Fo	ormat:		
			rst line of	the input contains n and k delimited by whitespace
		ii. Se	cond line	contains the Array A (modifiable array) with its values
			limited by	• • • • • • •
		iii. Tl	nird line co	ontains the Array B (non-modifiable array) with its values

delimited by spaces

Output Format:

Output the minimum sum of products of the two arrays

Constraints:

- i. $1 \le N \le 10^{5}$
- ii. $0 \le |A[i]|, |B[i]| \le 10^{5}$
- iii. $0 \le K \le 10^{9}$

Sample Input and Output

S.No.	Input	Output	
1	3 5	-31	
	12-3		
	-2 3 -5		
2	53	25	
	23454		
	3 4 2 3 2		

Explanation for sample 1:

Here total numbers are 3 and total modifications allowed are 5. So we modified A[2], which is -3 and increased it by 10 (as 5 modifications are allowed). Now final sum will be (1 * -2) + (2 * 3) + (7 * -5)-2 + 6 - 35-31-31 is final answer. **Explanation for sample 2:** Here total numbers are 5 and total modifications allowed are 3. So we modified A[1], which is 3 and decreased it by 6 (as 3 modifications are allowed). Now final sum will be

(2 * 3) + (-3 * 4) + (4 * 2) + (5 * 3) + (4 * 2)6 - 12 + 8 + 15 + 8 25

25 is final answer.

12. Consecutive Prime Sum

Problem Description

Some prime numbers can be expressed as a sum of other consecutive prime numbers. For example, 5 = 2 + 3, 17 = 2 + 3 + 5 + 7, 41 = 2 + 3 + 5 + 7 + 11 + 13. Your task is to find out how many prime numbers which satisfy this property are present in the range 3 to N subject to a constraint that summation should always start with number 2.

Write code to find out the number of prime numbers that satisfy the above-mentioned property in a given range.

S. Input Output Comment

	N.			
	No.	20		
	1	20	2	(Below 20, there are 2 such members: 5 and 17)
				5 = 2+3
				17 = 2+3+5+7
	2	15	1	
	Input Format			
	First line conta		nber N	
	Output Forma			
	Print the total r	number o	of all such	prime numbers which are less than or equal to N.
	Constraints:			
	2 <n<=12,000< th=""><th>,000,000</th><th></th><th></th></n<=12,000<>	,000,000		
13.	kth largest fac	ctor of N		
	Problem Desc	ription		
	A positive inte	ger d is s	said to be	a factor of another positive integer N if when N is divided
	by d, the remain	inder obt	ained is z	zero. For example, for number 12, there are 6 factors 1, 2,
	3, 4, 6, 12. H	Every po	sitive int	teger k has at least two factors, 1 and the number k
	itself.Given tw	o positiv	e integers	N and k, write a program to print the kth largest factor of
	N.			
	Input Format	:		
	The input is a c	comma-s	eparated l	ist of positive integer pairs (N, k)
	Output Forma	at:		
	The kth highes	t factor c	of N. If N	does not have k factors, the output should be 1.
	Constraints:			
	1 <n<1000000< th=""><th>0000.1<</th><th>k<600.Yc</th><th>ou can assume that N will have no prime factors which are</th></n<1000000<>	0000.1<	k<600.Yc	ou can assume that N will have no prime factors which are
	larger than 13.			
	Example 1			
	Input:			
	12,3			
	Output:			
	4			
	Explanation:			
	N is 12, k is 3.	The fac	tors of 12	are (1,2,3,4,6,12). The highest factor is 12 and the third
	largest factor is	s 4. The o	output mu	ist be 4
14.	Coins Distribu	ition Qu	estion (o	r Coins Required Question)
	Problem Desc	ription		
	Find the minin	mum nui	mber of a	coins required to form any value between 1 to N, both
	inclusive. Cun	nulative	value of	coins should not exceed N. Coin denominations are 1
	Rupee, 2 Rupe	e and 5 F	Rupee.	
	Let's understan	nd the pro	oblem usi	ng the following example. Consider the value of N is 13,

	then the minimum number of coins required to formulate any value between 1 and 13, is 6.
	One 5 Rupee, three 2 Rupee and two 1 Rupee coins are required to realize any value
	between 1 and 13. Hence this is the answer.
	However, if one takes two 5 Rupee coins, one 2 rupee coins and two 1 rupee coins, then to
	all values between 1 and 13 are achieved. But since the cumulative value of all coins
	equals 14, i.e., exceeds 13, this is not the answer.
	Input Format
	A single integer value
	Output Format
	Four Space separated Integer Values
	1st – Total Number of coins
	2nd – number of 5 Rupee coins.
	3rd – number of 2 Rupee coins.
	4th – number of 1 Rupee coins.
	Constraints
	0 <n<1000< th=""></n<1000<>
	Sample Input:
	13
	Sample Output:
	6 1 3 2
	0152

UNIT-IV		emiconductor Physics and Information Storage				6 hours
Fermi-Dirac extrinsic ser working of a	prob nicon a sola	to the concept of electrical conductivity, conductivity of conduct ability distribution function, Position of Fermi level in intri- inductors, variation of Fermi level with temperature (qualitative r cell on the basis of band diagrams and Applications. netic, and semiconductor memories	sic se	emic	ondı	ictors and

UNIT-V	Fiber Optics & Laser	8 hours
Fiber Optic	s: Introduction to fiber optics, Acceptance angle, Numerical aperture, Normalized	d frequency,
Classificati	on of fiber, Attenuation and Dispersion in optical fibers.	
Laser: Abso	orption of radiation, Spontaneous and stimulated emission of radiation, Einstein's	coefficients
Population	inversion, Ruby Laser, He-Ne Laser.	
Recent app	icationsof optical fibersandLaser(Qualitative):Laser-guided UAV (Drone).	
Course o	utcome: After completion of this course students will be able to:	
CO 1	Solve the relativistic mechanics problems	K1,K2,K3
CO 2	Apply the concept of quantum mechanics	K1,K2,K3
CO 3	Apply the laws of optics and their application in various processes	K1,K2,K3
CO 4	Define the laws of semiconductors.	K1,K2
CO 5	Explain the working of modern engineering tools and techniques of optical fiber and laser.	K1,K2

	B. TECH FIRST YEAR		
Course Code	ACSE0203	L T P	Credits
Course Title	Design Thinking I	310	4
Course Objec		·	·
	this course is to familiarize students with design think		
•	ovation. It aims to equip students with design thinking ski	ills and ignite	e the minds to
create innovative	ideas, develop solutions for real-time problems.		
Pre-requisites	None		
•	Course Contents / Syllabus		
UNIT-I	Introduction	8	HOURS
Introduction to d	esign thinking, traditional problem solving versus design	thinking, his	tory of design
thinking, wicked	problems. Innovation and creativity, the role of inn	ovation and	creativity in
-	ativity in teams and their environments, design mindset		
	design, 13 Musical Notes for Design Mindset, Examples	s of Great D	esign, Design
Approaches acros	s the world		
UNIT-II	Ethical Values and Empathy		8 HOURS
	umans as a combination of I (self) and body, basi	c physical	needs up to
-	sperity, the gap between desires and actualization. Under		-
society, institutio		-	
•	ding core values and feelings, negative sentiments and		
•	onduct: universal human goal, developing human consci		
	Inderstand stakeholders, techniques to empathize, iden		
	Interviews, empathy maps, emotional mapping, imm		-
	maps, and brainstorming, Classifying insights after		
	s &Don'ts for Brainstorming, Individual activity- 'Mocca		
UNIT-III	Problem Statement and Ideation		10 HOURS
• •	blem statement, creating personas, Point of View (PO	,	
	s, information gathering, target groups, samples, and fee	edbacks. Ide	
basic design dire	,,		
	ctions, Themes of Thinking, inspirations and references,		ng, inclusion

sketching and pr why's, "How M Association Tech introduction to vi UNIT-IV Fundamental cor characteristics of	esenting ideas, idea evaluation, double diamond approad ight We",Defining the problem using Ice-Cream Stick nique, Mind-Map,ideation activity games - six thinking sual collaboration and brainstorming tools - Mural, JamB Critical Thinking	ch, analyze - cs, Metapho ; hats, millio oard. cal and ordin s, structurin	ng, inclusion - four W's, 5 r & Random n-dollar idea 6 HOURS nary thinking g arguments

UNIT-V	Logic and Argumentation	8 HOURS
The argument,	claim, and statement, identifying premises and conclusion, truth and logic	c conditions,
valid/invalid a	rguments, strong/weak arguments, deductive argument, argument diagr	ams, logical
reasoning, scie	entific reasoning, logical fallacies, propositional logic, probability, an	d judgment,
obstacles to cri	tical thinking. Group activity/role plays on evaluating arguments	
Course outc	ome: After completion of this course, students will be able to	
CO 1	Develop a strong understanding of the design process and apply it in a variety of business settings	K2,K3
CO 2	Analyze self, culture, teamwork to work in a multidisciplinary environment and exhibit empathetic behavior	K3
CO 3	Formulate specific problem statements of real time issues and generate innovative ideasusing design tools	K3,K6
CO 4	Apply critical thinking skills in order to arrive at the root cause from a set of likely causes	K3
CO 5	Demonstrate an enhanced ability to apply design thinking skills for evaluation of claims and arguments	K3,K4

B. TECH FIRST YEAR							
Course Code	ACSE0202	L	Т	Р	Credit		
Course Title	Problem solving using Advanced Python	3	1	0	4		
Course object	tive: The objective of the course is to make its	stu	den	ts ab	le		
1	1 To learn the Object Oriented Concepts in Python						
2	To learn the concept of reusability through inheritance and polymorphism						
3	To impart the knowledge of functional programming	g					
4	To learn the concepts of designing graphical user in	terfa	ces				
5	To explore the knowledge of standard Python librar	ies					
Pre-requisites	S:Students are expected to have basic knowledge of	prog	gram	ming	concepts		
of python progra	mming.						
	Course Contents / Syllabus						
UNIT-I	Classes and Objects			8	8 hours		
Introduction: Py	thon Classes and objects, User-Defined Classes, Enc	apsu	latic	on, Da	ata hiding		
, Class Variables	s and Instance Variables, Instance methods, Class r	nethe	od, s	static	methods,		
constructor in p	ython, parametrized constructor, Magic Methods in	ı pyt	hon	, Obj	ect as an		
argument, Instan	ces as Return Values, namespaces						
UNIT-II	Object Oriented Concepts				8 hours		
Class's Method, I Introspection: In modules, introsp		, Pol	ymo	orphis	m		
UNIT-III	Functional Programming				8 hours		
	ice, Comprehensions, Immutability, Closures and De	ecora	tors	, gene	erators,		
	ators, Declarative programming				01		
UNIT-IV	GUI Programming				8 hours		
1. 0	age, Numeric Widgets, Boolean Widgets, Selection Vicker, Color Picker, Container Widgets, Creating a G			•			
Tkinter, button, o		UIA	ррп	catioi	1,		
UNIT-V	Libraries in Python				8 hours		
NumPy: Basic (Dperation , Indexing, slicing and Iterating, multidime	ensio	nal	arrays			
·	ling and writing data on Files, Pandas : Series and I			•	•		
• • •	rge Data Frames, Generate summary tables, Group			-	1 0		
	data. SciPy: Introduction to SciPy, Create functi			-	-		
-	tter plot, Bar charts, histogram, Stack charts, Legend				•		
subplots, Plotting function in pandas, Labelling and arranging figures, Save plots. Seaborn:							
style function, color palettes, distribution plots, category plot, regression plot.							
Course outcome: At the end of course, the student will be able to							
	inc. At the chu of course, the student w		l al	ne u	,		

CO 1		
	Define classes and create instances in python	K ₁ , K ₂
CO 2	Implement concept of inheritance and polymorphism using python	K ₃
CO 3	Implement functional programming in python	K ₂
CO 4	Create GUI based Python application	K ₃
CO 5	Applythe concept of Python libraries to solve real world problems	K ₃ , K ₆

	B.T	ECH FIRST YEAR(Foreign Language)	1	
Course Code	AAS	SL0202	L T P	Credit
Course Title	Fre	ench	200	02
Course object	tive:			
1	W	n introduction to French language and culture - Students ill learn to understand and articulate in day to day, real- è situations.		
2	LS	ne course provides a foundation in the four basic skills SRW (Listening, Speaking, Reading, and Writing) of nguage learning.		
Pre-requisite:				
• The stud	lent shou	ld be able to communicate in English.		
		Course Contents / Syllabus		
UNIT-I	Introd	uction to French	7 Hours	
≫ Basic gr	reetings a	and introductions		
> Differen	nces and s	similarities between English and French alpha	abets	
≫ Recogni	ize and sp	cell simple words and phrases in French		
≫ Commo	nly used	nouns and adjectives		
UNIT-II	Vocab	ulary Building		8 Hours
≫ Introduc	ce onesel	f and others		
➤ Identify	, speak a	nd understand the days of the week/ months/	seasons/o	colours
-	-	stand simple weather expressions		
≫ Underst	and, ask	and answer about date of birth/ important dat	es and ag	ge
		and and write numbers from $1 - 60$		
	masculir ouge/ syr	ne and feminine of regular nouns and adjectiv npa)	es (petit/	grand/

UNIT-III	Everyday Common Simple Sentences	7 Hours
> In the	city/ naming places and buildings	1
➤ Means	of transport / basic directions	
➤ Listen	to, understand, and respond to everyday conversation	
≫ Respo	nd to questions about ourselves and family members	
> Use the set \mathbb{E}	ne singular and plural of regular nouns (-s).	
UNIT-IV	Reading	10 Hours
≫ Food,	drink, groceries and meal	
≫ Everyc	lay life/ telling time	
≫ Makin	g appointments	
> Use d	efinite and indefinite articles.	
UNIT-V	Writing	8 Hours
➤ Fill in	a simple form (fiched'inscription/carte d'identité)	I
	be pictures (Speak and Write)	
	a short text on oneself	
Course outc At the end of	ome the course students will be able to	
CO 1	Recognize the basic sounds, letters, numbers, words and phrases of French.	
CO 2	Develop basic French vocabulary	
CO 3	Use simple phrases in real life conversations	
CO 4	Read simple sentences	

	B.TECH FIRST YEAR (Foreign Languag	ge)	
Course Code	AASL0203	L T P	Credit
Course Title	German	200	02
Course objectiv	e:		
1	An introduction to German language and cult Students will learn to understand and articulate in to day real-life situations.		
2	The course provides a foundation in the four basic skills LSRW (Listening, Speaking, Reading, and Writing) of language learning.		
Pre-requisites: The student	should be able to communicate in basic English.		
	Course Contents / Syllabus		
UNIT-I	Introduction to German		5 Hours
 Introducing Grammar: V personal pro simple sente verb conjug 	onouns, ence,		
UNIT-II	Vocabulary building		6 Hours
> hobbies,> numbers, n	building – the alphabet, nonths, seasons articles, singular and plural forms		
UNIT-III	Everyday common simple sentences		5 Hours
means of transport	and indefinite articles;	1	
UNIT-IV	Reading		7 Hours

Grammar: the a Everyday life, to Grammar: prep Leisure	nily / groceries and meals ccusative elling time, making appointments positions am, um, von. bis; modal verbs, possessive articles activity, celebrations activity, the accusative, past tense of to have and to be	
UNIT-V	Writing	7 Hours
Grammar: dativ A short text abo Grammar: chan Professions Grammar: perfe Clothes Health Grammar: perfe	out oneself. ging prepositions ect tense	
Course outco At the end of th	ome: e course students will be able to	
CO 1	Understand and be familiar with basic German and the culture	
CO 2	Recognise the foundational vocabulary	
CO 3	Use simple phrases in everyday conversations	
CO 4	Read simple sentences	
CO 5	Write simple sentences	
Text books		
1. NETZWERK	Deutsch alsFremdsprache A1(Goyal, New Delhi, 2015)	I

B.TECH FIRST YEAR (Foreign Language)					
Course CodeAASL0204L T PCredit					
Course TitleJapanese20002					
Course objective:					
1 An introduction to Japanese language and culture. Students will					
to understand and articulate in day to day real-life situations.					
2 The course provides a foundation in the four basic skills LS (Listening, Speaking, Reading, and Writing) of language learning					
Pre-requisites:					
The student should be able to communicate in basic English.					
The student should be keen to learn the language.					
Course Contents / Syllabus					
UNIT-IIntroduction to Japanese8 Hours					
 Introduction to Japanese alphabet (Hirangana), phonetics and pronunciation. Introducing ourselves and others, Introduction to Japanese Language Types of Japanese scripts- HIRANGANA, KATAKANA, Basic pronunciation rules Time and numbers – telling and asking the time, counting cardinal numbers, Grammar - different types of verbs, nouns – number & gender, pronouns, present and simple past tense. 					
UNIT-II Vocabulary building 8 Hours					
Use simple sentences to answer basic personal questions					
 Expressing gratitude Invitations Talking about plans Holidays Hotels & restaurants Town & country Word order – sentence, question, negative 					
UNIT-IIIEveryday common simple sentences8 Hours					

Custom	ner and shopk	eener				
 Making a request 						
 Home/ Relatives/ Fruits/ Vegetables/Animals 						
Grammar- Singular vs. Plural						
Question formation						
UNIT-IV		Reading		8 Hours		
• Transp	ortation					
• Week /	Month names	5				
 Shoppi 	ng					
		nmar rules – particles: 7	か (ka), は (wa), の	(no), と (to), を (o),に		
(ni),も	(mo), が (ga)	, や (ya).				
Gramm	nar- Present, l	Past, Future				
UNIT-V		Writing		8 Hours		
• Write s	hort text on c	6				
		bject, object, possessive,				
N	Aodal verbs					
Course outco	ome:					
At the end of	the course stu	idents will be able to				
CO1	understand t	he basics of Japanese La	nguage and its script.			
CO2	recognise th	e foundational vocabular	у.			
CO3	use simple p	hrases in everyday conve	rsations.			
CO4	read simple	sentences.				
CO5	write simple	esentences

	problems					
List of	f Experin	nent :				
S.No.		Name of Experiment				
	Class and	l Methods				
1	Python pr	ogram to demonstrate instantiating a class.				
2	Python pr	ogram to demonstrate use of class method and static method	nod			
3	Python pr	ogram to implement constructors.				
4	Python program to show that the variables with a value assigned in the class					
	declaration, are class variables and variables inside methods and constructors are					
	instance v					
5		ogram to create Bank-account class with deposit, withdra	w function			
	Inheritan					
6		ogram to demonstrate single inheritance				
7	• 1	ogram to demonstrate multilevel inheritance				
8		ogram to demonstrate multiple inheritance				
9		ogram to demonstrate hierarchical inheritance				
10	• •	ogram to demonstrate hybrid inheritance				
11	Polymorr Dethem					
11		ogram to demonstrate in-built polymorphic function	~			
<u>12</u> 13		ogram to demonstrate user defined polymorphic function ogram to demonstrate method overriding	5			
13						
14		al Programming ogram to demonstrate working of map				
14		ogram to demonstrate working of filter				
15	•	ogram to demonstrate working of reduce				
17		ogram to demonstrate immutable data types				
17	Python program to demonstrate Monkey Patching in Python					
10		ogram to demonstrate decorators with parameters in pyth	on			
17	r ymon pr	of an is demonstrate decorators with parameters in pyth	.011			

20	Python program to demonstrate conditional decorators	
21	Python program to demonstrate nested decorators	
22	Python program to demonstrate chain multiple decorators	
23	Python program to demonstrate use of generators	
24	Python program to demonstrate working of iterators	
25	Write a Python program to create a table and insert some records in that table.	
	Finally selects all rows from the table and display the records.	
	GUI Programming	
26	Python Program to understand working of various Tkinter widgets	
27	Create a Distance-time GUI calculator using Tkinter	
28	Write a NumPy program to calculate the difference between the maximum and the	
	minimum values of a given array along the second axis.	
29	Write a Python program to create a 2-D array with ones on the diagonal and zeros	
	elsewhere. Now convert the NumPy array to a SciPy sparse matrix in CSR format.	
30	Write a Python program to add, subtract, multiple and divide two Pandas Series.	
31	Write a program to Create Your Plot using python. Also add and delete axes.	
32	Write a program to plot data using seaborn and show the plot.

B. TECH FIRST YEAR						
Course (Code	AME0251		LTP	Credi	
Course Title		Digital Manufacturing Practices		003	1.5	
		Suggested	list of Experiments		1	
		(At least 10 expe	riments to be perfor	rmed)		
Sr. No.	Name of Experiments					
1	To perform facing, turning, taper turning, knurling, grooving and threading operations as per given drawing on lathe machine.					
2	To prepare a T-Shape and U-shape work piece by filing, sawing, drilling in Fitting shop.					
3	To cast	To cast a component using a single piece pattern in foundry shop,				
4		To study the G-M Codes for CNC machine and to perform different machining operations including facing, turning, grooving etc on CNC lathe.				
5	To cut	To cut a slot on CNC milling machine as per given drawing.				
6	To make a hole of given diameter on CNC drilling machine.					
7	To study construction and working of FDM 3D printing machine.					
8	To study construction and working of SLA 3D printing machine.					
9	To study the development of drawings using 3D scanner.					
10	To make an air tight bottle cap by using injection moulding.					
11	. To study construction and working of six axis robot (KUKA Sim Pro 3.0.4).					
12	Practic	on pneumatic contro	ol system using single ac	ting cylinder
