#### PLEASE NOTE:-

# • Internship (3-4 weeks) shall be conducted during summer break after II semester and will be assessed during III semester

#### Abbreviation Used:-

L: Lecture, T: Tutorial, P: Practical, CT: Class Test, TA: Teacher Assessment, PS: Practical Sessional, TE: Theory End Semester Exam., PE: Practical End Semester Exam.

#### AICTE Guidelines in Model Curriculum:

A student will be eligible to get Under Graduate degree with Honours only, if he/she completes the additional MOOCs courses such as Coursera certifications, or any other online courses recommended by the Institute (Equivalent to 20 credits). During Complete B.Tech. Program Guidelines for credit calculations are as follows.

- 1. For 6 to 12 Hours =0.5 Credit
- 2. For 13 to18 =1 Credit
- 3. For 19 to 24 =1.5 Credit
- 4. For 25 to 30 =2 Credit
- 5. For 31 to 35 =2.5 Credit
- 6. For 36 to 41 =3 Credit
- 7. For 42 to 47 =3.5 Credit
- 8. For 48 and above =4 Credit

For registration to MOOCs Courses, the students shall follow Coursera registration details as per the assigned login and password by the Institute these courses may be cleared during the B. Tech degree program (as per the list provided). After successful completion of these MOOCs courses, the students shall provide their successful completion status/certificates to the Controller of Examination (COE) of the Institute through their coordinators/Mentors only.

The students shall be awarded Honours Degree as per following criterion.

- i. If he / she secures 7.50 as above CGPA.
- ii. Passed each subject of that degree program in the single attempt without any grace.
- iii. Successful completion of MOOCs based 20 credits.

Course	Code	AAS0102	L	Т	Р	Credit
Course	Title	Engineering Chemistry 3	3	1	0	4
Course	objecti	ve:				
1	The co	ourse let students gain knowledge on existing and futu	ure	fuels	and t	their
	calorif	ic values				
2	The co	ourse explains the major water problems and their treatment	men	t. Ap	plicat	ions
	of Pha	se Rule in heterogeneous system.				
3	The co	ourse provides basic concepts of Electrochemistry and	d Ce	emen	ts. It	also
	provid	es basic knowledge about corrosion and their prevention	n m	ethod	ls.	
4	The co	ourse relies on elementary preparation and application	n of	poly	mers	and
	future	polymers. Applications of Organometallic compounds.				
5	The co	ourse intends to provide an overview of Molecular of	orbi	tal th	eory	and
	basic c	oncepts of spectroscopic techniques.

		<b>B. TECH FIRST YEAR</b>			
Course	Code	ACSE0101 L	Т	Р	Credit
Course	Title	Problem solving using Python 3	0	0	3
Course	objecti	ve:			1
1	-	art knowledge of basic building blocks of Python programn	ning		
2	To prov	vide skills to design algorithms for problem solving			
3	To imp	art the knowledge of implementation and debugging of basi	c progi	ams i	n Python
4	To diss	eminate the knowledge of basic data structures			
5	To prov	ide the knowledge of file system concepts and its application	on in da	ata ha	ndling
Pre-req	uisites:	Students are expected to be able to open command pron	npt wir	ndow	or terminal
window, a	edit a tex	t file, download and install software, and understand basic	orogran	nming	concepts.
		<b>Course Contents / Syllabus</b>			
UNIT-I	]	Basics of python programming		<b>8</b> h	ours
Introducti	on: Intro	duction to computer system, algorithms, Ethics and IT pol	icy in c	compa	ny, Feature
of object	-oriented	programming, A Brief History of Python, Applications	areas	of p	ython, The
Programn	ning Cyc	le for Python, Python IDE, Interacting with Python Program	ns.		
Elements	of Pythc	n:keywords and identifiers, variables, data types and type	conver	sion, o	operators in
python, ex	xpressior	is in python, strings.			
UNIT-I	I ]	Decision Control Statements			8 hours
Condition	nals: Con	ditional statement in Python (if-else statement, its working	and exe	ecutio	n),
Nested-if	statemer				
Loom . D.		t and elif statement in Python, Expression Evaluation & Flo	oat Rep	resen	tation.

Course o	outcome: At the end of course, the student will be able to	
CO 1	Write simple python programs.	K <sub>2</sub> , K <sub>3</sub>
CO 2	Develop python programs using decision control statements	K3, K6
CO 3	Implement user defined functions and modules in python	K <sub>2</sub>
CO 4	Implement python data structures –lists, tuples, set, dictionaries	K <sub>3</sub>
CO 5	Perform input/output operations with files in python and implement searching, sorting and merging algorithms	K <sub>3</sub> , K <sub>4</sub>

#### **Course outcome:**

At the end of the course students will be able to

CO 1	Understand the basic objective of the course and comprehend texts for professional	
	reading tasks in preparation for an International Certification in Business English.	
CO 2	Write professionally in simple and correct English.	
CO 3	Interpret listening tasks for better professional competence.	
CO 4	Recognize the elements of effective speaking with emphasis on applied phonetics.	
CO 5	Apply the skill of speaking at the workplace.

# List of Experiment:

	List of Fundamental Programs	
S.N.	Program Title	Category
1	Python Program to print "Hello Python"	Basic
2	Python Program to read and print values of variables of different data types.	Basic
3	Python Program to perform arithmetic operations on two integer numbers	Basic
4	Python Program to Swap two numbers	Basic
5	Python Program to convert degree Fahrenheit into degree Celsius	Operators
6	Python Program to demonstrate the use of relational operators.	Operators
7	Python Program to understand the working of bitwise and logical operators.	Operators
8	Python Program to calculate roots of a quadratic equation.	Conditional
9	Python Program to check whether a year is leap year or not.	Conditional
10	Python Program to find smallest number among three numbers.	Conditional
11	Python Program to make a simple calculator.	Conditional
12	Python Program to find the factorial of an integer number.	Loop
13	Python Program to find the reverse of an integer number.	Loop
14	Python Program to find and print all prime numbers in a list.	Loop
15	Python Program to Find the Sum of 'n' Natural Numbers	Loop
16	Python Program to print sum of series: - $1/2 + 2/3 + 3/4 + \dots + n/(n+1)$	Loop
17	Python Program to print pattern using nested loop	Loop
18	Python Program to Display the multiplication Table of an Integer	Loop
19	Python Program to Print the Fibonacci sequence	Loop
20	Python Program to Check Armstrong Number	Loop
21	Python Program to Find Armstrong Number in an Interval	Loop
22	Python Program to check Using function whether a passed string is	Function
	palindrome or not	

23	Python Program using function that takes a number as a parameter, check	Function
	whether the number is prime or not.	
24	PythonProgram using function that computes gcd of two given numbers.	Function
25	Python Program to Find LCM of two or more given numbers.	Function
26	Python Program to Convert Decimal to Binary, Octal and Hexadecimal	Function
27	Python Program To Find ASCII value of a character	Basic
28	Python Program to Display Calendar	Loop
29	Python Program to Add Two Matrices	Loop
30	Python Program to Multiply Two Matrices	Loop
31	Python Program to Transpose a Matrix	Loop
32	Python Program to Sort Words in Alphabetic Order	Sorting
33	Python Program to Display Fibonacci Sequence Using Recursion	Recursion
34	Python Program to Find Factorial of Number Using Recursion	Recursion
35	Python Program that implements different string methods.	String
36	Python Program that validates given mobile number. Number should start	String
	with 7, 8 or 9 followed by 9 digits.	
37	Python Program to implement various methods of a list.	List
38	Python Program that has a nested list to store toppers details. Edit the details	List
20	and reprint them.	
39	Python Program to swap two values using tuple assignment.	Tuple
40	Python Program that has a set of words in English language and their	Dictionary
10	corresponding Hindi words. Define dictionary that has a list of words in	Dictionary
	Hindi language and their corresponding Hindi Sanskrit. Take all words from	
	English language and display their meaning in both languages.	
41	Python Program that inverts a dictionary.	Dictionary
42	Python Program that reads data from a file and calculates percentage of	File
72	white spaces, lines, tabs, vowels and consonants in that file.	1 110
43	Python Program that fetches data from a given url and write it in a file.	File
44	Python Program to understand the concept of Exception Handling	Exception
	I yulon I togram to understand the concept of Exception funding	Handling
45	Python Program to implement linear and binary search	Searching
46	Python Program to sort a set of given numbers using Bubble sort	Sorting
<b>S.No.</b>		Sorting
	Word Problem Experiments	
1.	String Rotation	
	Problem Description	
	Rotate a given String in the specified direction by specified magnitude.	
	After each rotation make a note of the first character of the rotated String, aft	
	are performed the accumulated first character as noted previously will form a	nother string
	say FIRSTCHARSTRING.	1 . '
	Check If FIRSTCHARSTRING is an Anagram of any substring of the Origina	al string.

	If was mint "VES" otherwise "NO"	Inn	<b>.</b> +					
	If yes print "YES" otherwise "NO".	-		<b>'l.</b>		.1 1:	4	aina a ainala integra a Tha
	The first line contains the original st							
	ith of the next q lines contains char the magnitude.	racte	er al	ij de	noui	ig ai	rectio	n and integer r[1] denoting
	<b>Constraints</b>							
		`						
	1 <= Length of original string <= 30 1<= q <= 10	,						
	Output

	anagram of any sub string of origina							
2.	Jurassic Park							
	Problem Description							
	Smilodon is a ferocious animal which	ch u	sed t	to liv	e du	ring	the Pl	eistocene epoch (2.5 mya-
	10,000 years ago). Scientists succes	ssful	ly cr	eated	d fev	v sm	ilodor	ns in an experimental DNA
:	research. A park is established and the	hose	e smi	ilodo	ns ai	e ke	pt in a	a cage for visitors.
	This park consists of Grasslands(G)	), M	ount	ains	(M)	and	Water	bodies(W) and it has three
	gates (situated in grasslands only). B	Belo	w is	a sar	nple	layo	ut.	
		w	NA	c	c	C	C	
	<u>_</u>	vv	M	G	G	G	G	
	7	М	G	W	G	Μ	М	
		G	G	G	G	G	G	
	<u>_</u>	3	0	0	0	0	0	
	N	W	G	G	Μ	W	G	
	Before opening the park, club autho	ority	dec	ides	to ca	lcula	ate Sa	fety index of the park. The
	procedure of the calculation is descri	ibed	l belo	ow. I	Pleas	e hel	lp ther	n to calculate.
	Safety Index calculation							
	Assume a person stands on grassland	d(x)	and	a Sr	niloo	lon e	escape	s from the cage situated on
	grassland(y). If the person can esca	ipe f	from	any	of the	nose	three	gates before the Smilodon
	able to catch him, then the grassland	1/						

Smilodon both take 1 second to move from one area to another adjacent area(top, bottom, left or right) but a person can move only over grasslands though Smilodon can move over grasslands and mountains.

If any grassland is unreachable for Smilodon(maybe it is unreachable for any person also), to increase safe index value Club Authority use to mark those grasslands as safe land. Explained below

W	М	G	G	G	G	
М	G	w	G(x)	м	м	
G	W	G	G(y)	G	G	
w	G(z)	w	М	w	G	

For the above layout, there is only one gate at (4,6)

Y is the position of Smilodon's cage

X is not safe area

Z is a safe area as is it not possible for smilodon to reach z

Safety index=(total grassland areas which are safe\*100)/total grassland area

## Constraints

- i.  $3 \le R, C \le 10^{3}$
- ii. Gates are situated on grasslands only and at the edge of the park

iii. The cage is also situated in grassland only

iv. The position of the cage and the position of three gates are different

## **Input Format**

The first line of the input contains two space-separated integers R and C, denoting the size of the park (R\*C)

The second line contains eight space-separated integers where

First two integers represent the position of the first gate

3rd and 4th integers represent the position of second gate

5th and 6th integers represent the position of third gate respectively

The last two integers represent the position of the cage

Next R lines, each contains space separated C number of characters. These R lines represent the park layout.

## Output

Safety Index accurate up to two decimal places using Half-up Rounding method

#### Explanation Example 1

Input

4 4 1 1 2 1 3 1 1 3

G GGG

GWWM

GGWW

	MGMM
	Output
	75.00
3.	Bank Compare
0.	Problem Description
	There are two banks; Bank A and Bank B. Their interest rates vary. You have received
	offers from both bank in terms of annual rate of interest, tenure and variations of rate of
	interest over the entire tenure.
	You have to choose the offer which costs you least interest and reject the other.
	Do the computation and make a wise choice.
	The loan repayment happens at a monthly frequency and Equated Monthly Installment
	(EMI) is calculated using the formula given below :
	EMI = loanAmount * monthlyInterestRate/(1 - 1 / (1
	+monthlyInterestRate)^(numberOfYears * 12))
	Constraints
	i. 1 <= P <= 1000000
	ii. 1 <=T <= 50
	iii. $1 \le N1 \le 30$
	iv. $1 \le N2 \le 30$
	Input Format
	First line : P – principal (Loan Amount)
	Second line : T – Total Tenure (in years).
	Third Line : N1 is number of slabs of interest rates for a given period by Bank A. First slab
	starts from first year and second slab starts from end of first slab and so on.
	Next N1 line will contain the interest rate and their period. After N1 lines we will receive N2 viz. the number of slabs offered by second bank.
	Next N2 lines are number of slabs of interest rates for a given period by Bank B. First slab
	starts from first year and second slab starts from end of first slab and so on.
	The period and rate will be delimited by single white space.
	Output
	Your decision – either Bank A or Bank B.
	Explanation

	5 8.5
	3
	10 6.9

	5 8.5
	5 7.9
	Output
	Bank B
4.	Cross Words
	Problem Description
	A crossword puzzle is a square grid with black and blank squares, containing clue numbers (according to a set of rules) on some of the squares. The puzzle is solved by obtaining the solutions to a set of clues corresponding to the clue numbers. The solved puzzle has one letter in each of the blank square, which represent a sequence of
	letters (consisting of one or more words in English or occasionally other languages) running along the rows (called "Across", or "A") or along the columns (called "Down" or "D"). Each numbered square is the beginning of an Across solution or a Down solution. Some of the across and down solutions will intersect at a blank square, and if the solutions are consistent, both of them will have the same letter at the intersecting square. In this problem, you will be given the specifications of the grid, and the solutions in some
	random order. The problem is to number the grid appropriately, and associate the answers consistently with the clue numbers on the grid, both as Across solutions and as Down solutions, so that the intersecting blank squares have the same letter in both solutions.
	Rules for Clue Numbering
	The clue numbers are given sequentially going row wise (Row 1 first, and then row2 and so on)
	Only blank squares are given a clue number
	A blank square is given a clue number if either of the following conditions exist (only one number is given even if both the conditions are satisfied)
	It has a blank square to its right, and it has no blank square to its left (it has a black square to its left, or it is in the first column). This is the beginning of an Across solution with that number
	It has a blank square below it, and no blank square above it (it has a black square above it or it is in the first row). This is the beginning of a Down solution with that number
	Constraints i. 5<=N<=15 ii. 5<=M<=50
	Input Format
	The input consists of two parts, the grid part and the solution part The first line of the grid part consists of a number, N, the size of the grid (the overall grid is N x N) squares. The next N lines correspond to the N rows of the grid. Each line is
	comma separated, and has number of pairs of numbers, the first giving the position (column) of the beginning of a black square block, and the next giving the length of the block. If there are no black squares in a row, the pair "0,0" will be specified. For example, if a line contains "2,3,7,1,14,2", columns 2,3,4 (a block of 3 starting with 2), 7 (a block of
	1 starting with 7) and 14,15 (a block of 2 starting with 14) are black in the corresponding

row.

The solution part of the input appears after the grid part. The first line of the solution part contains M, the number of solutions. The M subsequent lines consist of a sequence of letters corresponding to a solution for one of the Across and Down clues. All solutions will be in upper case (Capital letters)

#### Output

The output is a set of M comma separated lines. Each line corresponds to a solution, and consists of three parts, the clue number, the letter A or D (corresponding to Across or Down) and the solution in to that clue (in upper case)

The output must be in increasing clue number order. If a clue number has both an Across and a Down solution, they must come in separate lines, with the Across solution coming before the Down solution.

before the Down solution

Skateboard
<b>Problem Description</b>
The amusement park
skating surface is a gri
it is possible to direct

5.

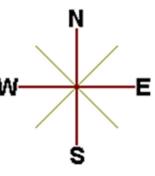

The amusement park at Patagonia has introduced a new skateboard competition. The skating surface is a grid of N x N squares. Most squares are so constructed with slopes that it is possible to direct the skateboard in any of up to three directions of the possible four (North ,East, South or West, represented by the letters N, E, S and W respectively). Some squares however have a deep drop from the adjacent square from which it is impossible to

go to any adjacent square. These are represented by D (for Drop) in that square. The objective is to maneuver the skateboard to reach the South East corner of the grid, marked F.

Each contestant is given a map of the grid, which shows where the Drop squares are (marked D), where the Final destination is (marked F), and, for each other square, the directions it is possible to maneuver the skateboard in that square.

The contestant draws lots to determine which of the squares on the boundaries of the grid on the North or the West of the grid (the top or the left in the diagram) he or she should start in. Then, using a map of the grid, he or she needs to try to reach the South East corner destination by maneuvering the skateboard.

ES	ES	SE	ES	ES	s	
SE	ES	SE	ES	ES	s	
ES	ES	SE	ES	SE	s	1AJ
ES	SE	ES	SE	E	D	44
SE	ES	D	WSE	MES	NS	
E	E	ME	E	E	F	

In some cases, it is impossible to reach the destination. For example, in the diagram above, if one starts at the North East corner (top right in the diagram), the only way is to go is South, until the Drop square is reached (three squares South), and the contestant is stuck there.

A contestant asks you to figure out the number of squares at the North or West boundary (top or left boundary in the map) from which it is feasible to reach the destination.

## Constraints

i. 5<=N<=50

## **Input Format**

The first line of the input is a positive integer N, which is the number of squares in each side of the grid.

The next N lines have a N strings of characters representing the contents of the map for that corresponding row. Each string may be F, representing the Final destination, D, representing a drop square, or a set of up to three of the possible four directions (N,E,S,W) in some random order. These represent the directions in which the contestant can maneuver the skateboard when in that square.

## Output

The output is one line with the number of North or West border squares from which there is a safe way to maneuver the skateboard to the final destination.

6.	Chakravyuha

## **Problem Description**

During the battle of Mahabharat, when Arjuna was far away in the battlefield, Guru Drona made a Chakravyuha formation of the Kaurava army to capture YudhisthirMaharaj. Abhimanyu, young son of Arjuna was the only one amongst the remaining Pandava army who knew how to crack the Chakravyuha. He took it upon himself to take the battle to the enemies.

Abhimanyu knew how to get power points when cracking the Chakravyuha. So great was his prowess that rest of the Pandava army could not keep pace with his advances. Worried at the rest of the army falling behind, YudhisthirMaharaj needs your help to track of Abhimanyu's advances. Write a program that tracks how many power points Abhimanyu has collected and also uncover his trail

A Chakravyuha is a wheel-like formation. Pictorially it is depicted as below

Fig 1. Chakravyuha

A Chakravyuha has a very well-defined co-ordinate system. Each point on the co-ordinate system is manned by a certain unit of the army. The Commander-In-Chief is always located at the centre of the army to better co-ordinate his forces. The only way to crack the Chakravyuha is to defeat the units in sequential order.

A Sequential order of units differs structurally based on the radius of the Chakra. The radius can be thought of as length or breadth of the matrix depicted above. The structure i.e. placement of units in sequential order is as shown below

1	2	3	4	5
16	17	18	19	6
15	24	25	20	1
14	23	22	21	8
13	12	11	10	9

## Fig 2. Army unit placements in Chakravyuha of size 5

The entry point of the Chakravyuha is always at the (0,0) co-ordinate of the matrix above. This is where the 1st army unit guards. From (0,0) i.e. 1st unit Abhimanyu has to march towards the center at (2,2) where the 25th i.e. the last of the enemy army unit guards. Remember that he has to proceed by destroying the units in sequential fashion. After destroying the first unit, Abhimanyu gets a power point. Thereafter, he gets one after destroying army units which are multiples of 11. You should also be a in a position to tell YudhisthirMaharaj the location at which Abhimanyu collected his power points.

## **Input Format:**

First line of input will be length as well as breadth of the army units, say N

## **Output Format:**

- Print NxN matrix depicting the placement of army units, with unit numbers delimited by (\t) Tab character
- Print Total power points collected
- Print coordinates of power points collected in sequential fashion (one per line)
- Constraints:  $0 < N \leq 100$

9.	ISL Schedule			
	Problem Desc	ription		
	The Indian Soc	ccer League (IS	L) is an annual football tournament.	
	The group stag	ge of ISL featur	res N teams playing against each other with fol	llowing set of
	rules:			
	i.	N teams play a	gainst each other twice - once at Home and once	e Away
	ii.	A team can pla	y only one match per day	
	iii.	A team cannot	play matches on consecutive days	
	iv.	A team cannot	play more than two back to back Home or Awa	y matches
	<b>v.</b>	Number of mat	cches in a day has following constraints	
		a. The ma	tch pattern that needs to be followed is -	
		•	Day 1 has two matches and Day 2 has one matc	h,
		•	Day 3 has two matches and Day 4 has one matc	h and so on
		b. There c	an never be 3 or more matches in a day	
	vi.	Gap between tw	wo successive matches of a team cannot exceed	floor(N/2)
		days where floo	or is the mathematical function floor()	
	vii.	Derby Matches	s (any one)	
		a. At least	half of the derby matches should be on weeken	ıd
		b. At least	half of the weekend matches should be derby n	natches
	Your task is to	generate a sche	edule abiding to above rules.	
	Input Format	:		
	-	ins number of t	eams (N).	
			teams, delimited by space	
	<b>Output Form</b>			
	Match format:			
	where Ta is the	e home team wi	th id a and Tb is the away team with id b.	

	For eac				0					
		• •	#D Ta-vs-Tb Tm-	-vs-Tn"						
	One match:- "#D Tx-vs-Ty"									
	where D is the day id and [a, b, m, n, x, y] are team ids. Constraints:									
	Consti		<= N <= 100							
			1. 100							
	Note :

	ii.	A 10	ocation of	nce visited in a particular path cannot be visited again.
	iii.			only consider adjacent hops. The route cannot consist of
			gonal hop	
	iv.	-	-	with a hurdle cannot be visited.
	v.		-	AxN signifies that the matrix consists of rows ranging from 0 to
	v.			umns ranging from 0 to N-1.
	vi.			ition is not reachable or source/ destination overlap with
	V1.			t cost as -1.
	Sample In		-	
				Explanation
			24	Here matrix will be of size 3x10 matrix with a hurdle at
			2-1	(1,2),(1,5) and $(1,8)$ with starting point A(0,0) and stop point
		2		B(1,7)
		5		$\mathbf{D}(1,7)$
		8		3 10
		0		3 (no. of hurdles )
		7		1 2
		/		15
				18
				0 0 - (position of A)
				1 7 (position of B)
				r / (position of b)
				(->) count is 24. So final answer will be 24. No other route
				longer than this one is possible in this matrix.
	2 2	2 -	-1	No path is possible in this 2*2 matrix so answer is -1
			-1	ivo paul is possible ili tilis 2.º2 matrix so answer is -1
		0		
		1		
11		0		
11.	Min Produ		-	
	Problem D	-		and a final state of the same of the same size sizes that
				num sum of Products of two arrays of the same size, given that
				on the first array. In each modification, one array element of
		•		increased or decreased by 2.
			sum is St	ummation (A[i]*B[i]) for all i from 1 to n where n is the size of
	both arrays			
	Input Form		41:ma af 4	the import contains a and he delimited her with items of
	i. ::			the input contains n and k delimited by whitespace
	ii.			contains the Array A (modifiable array) with its values
			mited by	-
	iii.	I hir	ra iine co	ntains the Array B (non-modifiable array) with its values

delimited by spaces

## **Output Format:**

Output the minimum sum of products of the two arrays

## **Constraints:**

i. 
$$1 \le N \le 10^{5}$$

ii.  $0 \le |A[i]|, |B[i]| \le 10^{5}$ 

iii.  $0 \le K \le 10^{9}$ 

## Sample Input and Output

S.No.	Input	Output	
1	3 5	-31	
	12-3		
	-2 3 -5		
2	53	25	
	23454		
	3 4 2 3 2		

## **Explanation for sample 1:**

Here total numbers are 3 and total modifications allowed are 5. So we modified A[2], which is -3 and increased it by 10 (as 5 modifications are allowed). Now final sum will be (1 \* -2) + (2 \* 3) + (7 \* -5)-2 + 6 - 35 -31

-31 is final answer.

## **Explanation for sample 2:**

Here total numbers are 5 and total modifications allowed are 3. So we modified A[1], which is 3 and decreased it by 6 (as 3 modifications are allowed).

Now final sum will be

```
(2 * 3) + (-3 * 4) + (4 * 2) + (5 * 3) + (4 * 2)
6 - 12 + 8 + 15 + 8
25
```

25 is final answer.

# 12. Consecutive Prime Sum

Problem Description

Some prime numbers can be expressed as a sum of other consecutive prime numbers. For example, 5 = 2 + 3, 17 = 2 + 3 + 5 + 7, 41 = 2 + 3 + 5 + 7 + 11 + 13. Your task is to find out how many prime numbers which satisfy this property are present in the range 3 to N subject to a constraint that summation should always start with number 2.

Write code to find out the number of prime numbers that satisfy the above-mentioned property in a given range.

S. Input Output Comment
-------------------------

	No.			
	1	20	2	(Below 20, there are 2 such members: 5 and 17)
		20	2	5 = 2+3
				17 = 2+3+5+7
	2	15	1	
		15	1	
	Input Format			
	First line conta		nber N	
	Output Forma	at:		
	Print the total r	number o	of all such	h prime numbers which are less than or equal to N.
	<b>Constraints:</b>			
	2 <n<=12,000< th=""><th>,000,000</th><th></th><th></th></n<=12,000<>	,000,000		
13.	kth largest fac	tor of N		
	Problem Desc	ription		
	A positive inte	ger d is s	said to be	e a factor of another positive integer N if when N is divided
	by d, the remain	inder obt	ained is	zero. For example, for number 12, there are 6 factors 1, 2,
	3, 4, 6, 12. H	Every po	sitive in	nteger k has at least two factors, 1 and the number k
	itself.Given tw	o positiv	e integei	rs N and k, write a program to print the kth largest factor of
	N.			
	Input Format	:		
	The input is a c	comma-s	eparated	list of positive integer pairs (N, k)
	Output Forma	at:		
	-	t factor o	of N. If N	I does not have k factors, the output should be 1.
	<b>Constraints:</b>			
	1 <n<1000000< th=""><th>0000. 1&lt;</th><th>k&lt;600.Y</th><th>You can assume that N will have no prime factors which are</th></n<1000000<>	0000. 1<	k<600.Y	You can assume that N will have no prime factors which are
	larger than 13.			
	Example 1			
	Input:			
	12,3			
	Output:			
	4			
	<b>Explanation:</b>			
				2 are $(1,2,3,4,6,12)$ . The highest factor is 12 and the third
	largest factor is		-	
14.			estion (	or Coins Required Question)
	Problem Desc			
				coins required to form any value between 1 to N, both
				f coins should not exceed N. Coin denominations are 1
	Rupee, 2 Rupe	e and 5 F	Rupee.	
	Lat'a undanatar	d the m	oblom w	sing the following example. Consider the value of $N \approx 12$

<b>`Course C</b>	de AME015	1			L	Τ	Р	Credit	
Course Ti	le Digital	Manufactur	ing Practice	s	0	0	3	1.5	
	·	Suggested lis	st of Experin	nents					
	(At lea	st 10 experi	ments to be	perforn	ned	)			
Sr. No.	Sr. No. Name of Experiments								
1	To perform fa	icing, turning,	taper turning,	knurling	, gr	oovi	ng a	and threading	

	operations as per given drawing on lathe machine.
2	To prepare a T-Shape and U-shape work piece by filing, sawing, drilling in
	Fitting shop.
3	To cast a component using a single piece pattern in foundry shop,
4	To study the G-M Codes for CNC machine and to perform different machining
	operations including facing, turning, grooving etc on CNC lathe.
5	To cut a slot on CNC milling machine as per given drawing.
6	To make a hole of given diameter on CNC drilling machine.
7	To study construction and working of FDM 3D printing machine.
8	To study construction and working of SLA 3D printing machine.
9	To study the development of drawings using 3D scanner.
10	To make an air tight bottle cap by using injection moulding.
11	. To study construction and working of six axis robot (KUKA Sim Pro
	3.0.4).
12	Practice on pneumatic control system using single acting cylinder.

Course Title	Engineering Mathematics-II	3	1	0	4				
Course object	eering	g students with							
<b>Course objective:</b> The objective of this course is to familiarize the engineering students with techniques of solving Ordinary Differential Equations, Fourier series expansion, Laplace Transform and vector calculus and its application in real world. It aims to equip the students with adequate knowledge of mathematics that will enable them in formulating problems and solving problems analytically.									
-	:Knowledge of Engineering Mathematics –I and	nd	Matl	nema	tics upto 12 <sup>th</sup>				
standard.									
	Course Contents / Syllabus				101				
	nary Differential Equation of Higher Order		~		10 hours				
	al equation of nth order with constant coefficien			-	-				
	neardifferential equations, Second order linear				-				
	variable coefficients, Solution by changing independent variable, Reduction of order, Normal								
form, Method of variation of parameters, Series solutions (Frobenius Method).

UNIT-V	Superconductivity and Nanomaterials	8 hours				
Temperature dependence of resistivity, Effect of magnetic field (Meissner effect), Penetration depth,						
Type I and T	Type II Superconductors, Temperature dependence of critical field, BCS th	neory(qualitative),				
High temper	ature superconductors,					
Some engine	eering applications(qualitative): Concept of Maglev vehicles (Bullet Tra	ins & hyper loop				
trains).						
	to nanomaterials, Basic principles of nano- science and technology, Cru	eation and use of				
-	Structure, properties and uses of carbon nanotubes.					
-	eering applications(qualitative): Radar absorbing materials (RAM) or Stea	lth materials used				
in military a	ircrafts (e.g.Rafale). Transformation of micro to nano-UAVs (Drones)					
Course ou	tcome: After completion of this course students willbeable to:					
CO 1	Solve the relativistic mechanics problems	K1,K2,K3				
CO 2	Apply the concept of quantum mechanics	K1,K2,K3				
CO 3	Apply the laws of optics and their application in various processes	K1,K2,K3				
CO 4	Calculate the various parameters of crystal structures.	K1,K2,K3				
CO 5	Explain the basic phenomena of superconductivity and nanotechnology.	K1,K2

B.TECH FIRST YEAR							
Course Cod	e	AEC0201	L	Т	Р	Credit	
<b>Course Title</b>	)	<b>Basic Electrical and Electronics Engineering</b>	3	1	0	4	
Course ob	jectiv	ve:					
2. 3. 4.	rthii	ng, a	e) electrical and Energy application.				
	10051	Basic knowledge of 12th Physics and Mathematics Course Contents / Syllabus					
UNIT-I	D.C	CIRCUIT ANALYSIS AND NETWORK THEOREMS				10	
	Concept of network, Active and passive elements, voltage and current sources, concept of linearity and linear network, unilateral and bilateral elements, source transformation, Kirchoff's Law: loop and nodal methods of analysis, star delta transformation, network theorems: Superposition theorem, Thevenin's theorem, Norton's theorem, maximum power transfer theorem.						
UNIT-II	Sing	ADY STATE ANALYSIS OF AC CIRCUIT le phase AC circuit: AC fundamentals, concept of phasors, sentation of sinusoidally varying voltage and current, analysis of	-			10	
	and presor	parallel RLC circuits, j-notation, Different types of power, power nance in series and parallel circuits.	facto	r,			
UNIT-III	SING SYS Sing equa Intro syste MCE	The relations in star and delta connections. GLE PHASE TRANSFORMER AND ELEMENTS OF PO TEM The Phase Transformer: Principle of operation, construction, tion, equivalent circuit, losses and efficiency. Doduction to Elements of Power System: General layout of m, Components of Distribution system: Switch Fuse Unit B, ELCB, MCCB, Importance of Earthing, Elementary calculation gy consumption, Battery Backup.	, EM Powe (SFU	F er ),		09	
UNIT-IV		IICONDUCTOR DIODE AND THEIR APPLICATIONS duction of Semiconductors: Intrinsic and Extrinsic, P-N Jun	nction			10	

	<ul> <li>Diode: Depletion layer, V-I characteristics, Half and Full Wave rectification, Clippers, Breakdown Mechanism: Zener and Avalanche, Zener Diode as Shunt Regulator.</li> <li>Display Devices Liquid Crystal Display (LCD), Light Emitting Diode (LED), Organic-Light Emitting Diode (O-LED), 7- segment display.</li> </ul>	
UNIT	<ul> <li><b>OPERATIONAL AMPLIFIERS</b> <ul> <li>Introduction, Op-Amp Basic, Practical Op-Amp Circuits (Inverting Amplifier, Noninverting Amplifier, Summing Amplifier, Integrator, Differentiator).</li> <li>Electronic Instrumentation</li> </ul> </li> </ul>	09
	Digital Multimeter (DMM), Types of sensor, Introduction to IoT and its application.	
Cours	e outcome: After successful completion of this course students will be abl Apply the principle of KVL/KCL and network theorems for analysis of	le to
001	D.C circuit.	
CO 2	Analyze the steady state behavior of single phase and three phase AC electrical circuits.	
CO 3	Illustrate and analyze the working principles of a single phase transformer, efficiency, and components of Power system, Earthing, and energy calculation.	
CO 4	Explain the construction, working principle, and application of PN junction diode, Zener diode and Display devices.	
CO 5	Explain the concept of Op-Amp, Digital multimeter, Sensors,IoT and its applications.

		<b>B.TECH FIRST YEAR(Foreign Language)</b>				
Course C	Code	AASL0202	L	Т	Р	Credit
Course T	itle	French	2	0	0	2
Course o	bjecti	ive:				
1		An introduction to French language and culture - S learn to understand and articulate in day to day, real-lift				
2		The course provides a foundation in the four basic skil (Listening, Speaking, Reading, and Writing) of language				
Pre-requ	isite:					I
-		ent should be able to communicate in English.				
		Course Contents / Syllabus				
UNIT-I		Introduction to French		7	' Ho	ours
≫ Bas	sic gre	eetings and introductions	I			
≫ Dif	feren	ces and similarities between English and French alphab	ets			
≫ Rec	cogniz	ze and spell simple words and phrases in French				
≫ Coi	mmor	ly used nouns and adjectives				
UNIT-II		Vocabulary Building			8	8 Hours
≫ Intr	roduc	e oneself and others				
≫ Ide	ntify,	speak and understand the days of the week/ months/ se	easc	ons	/col	ours
≫ Spe	eak an	d understand simple weather expressions				
> Un	dersta	nd, ask and answer about date of birth/ important dates	an	d a	ge	
≫ Ide	ntify,	understand and write numbers from $1 - 60$				
		nasculine and feminine of regular nouns and adjectives buge/ sympa)	; (p	etit	:/ gr	and/
010						

➤ Means of	ty/ naming places and buildings of transport / basic directions o, understand, and respond to everyday conversation						
-	to questions about ourselves and family members						
$\gg$ Use the	singular and plural of regular nouns (-s).						
UNIT-IV	JNIT-IV Reading						
≫ Food, di	rink, groceries and meal						
≫ Everyda	y life/ telling time						
➤ Making	appointments						
$\gg$ Use def	inite and indefinite articles.						
UNIT-V	Writing	8 Hours					
	simple form ( fiched'inscription/ carte d' identité) e pictures (Speak and Write)						
➤ Write a	short text on oneself						
<b>Course outco</b> At the end of t	<b>me</b> he course students will be able to						
CO 1	Recognize the basic sounds, letters, numbers, words and phrases of French.						
CO 2	Develop basic French vocabulary						
CO 3	Use simple phrases in real life conversations						
CO 4	Read simple sentences						
CO 5	Write simple sentences and fill in a form						

	В	.TECH FIRST YEAR (Foreign Language)				
Course Co	ode	AASL0203	L	Т	Р	Credit
Course Ti	itle	German	2	0	0	2
Course ob	jective:					1
1		introduction to German language and culture. Students verstand and articulate in day to day real-life situations.	will	lea	arn t	0
2		course provides a foundation in the four basic skills LSRW ( aking, Reading, and Writing) of language learning.	List	teni	ng,	
Pre-requi		uld be able to communicate in basic English.				
		<b>Course Contents / Syllabus</b>				
UNIT-I		Introduction to German				5 Hours
<ul><li>&gt; Gran</li><li>&gt; perso</li><li>&gt; simp</li></ul>	nmar: W qu onal pronou ole sentences conjugation	ns,				
UNIT-II		Vocabulary building			(	6 Hours
> hobb > num	oies, bers, montl	ding – the alphabet, ns, seasons les, singular and plural forms				
UNIT-III		Everyday common simple sentences			Ę	5 Hours
means of tra Grammar: c	ansport, bas lefinite and	ces and buildings, ic directions indefinite articles; ht; imperative				
UNIT-IV		Reading			-	7 Hours

Grammar: the Everyday life Grammar: pr Leisur	e accusativ , telling tir epositions re activity,	peeries and meals e ne, making appointments am, um, von. bis; modal verbs, possessive articles celebrations rbs, the accusative, past tense of to have and to be	
UNIT-V		Writing	7 Hours
Grammar: dat A short text a Grammar: cha Professions Grammar: per Clothes Healt Grammar: per	ive about ones anging pre rfect tense h and the l fect tense	positions body	
Course out At the end of		students will be able to	
CO 1	Unders	stand and be familiar with basic German and the culture	
CO 2	Recogn	nise the foundational vocabulary	
CO 3	Use sir	nple phrases in everyday conversations	
CO 4	Read s	imple sentences	
CO 5	Write s	simple sentences

(ni),も(mo), が	grammar rules – particles: か (ka), は (v (ga), や (ya). eent, Past, Future	wa),の(no),と(to),を(o),に
UNIT-V	Writing	8 Hours
• Write short text	t on oneself	
Grammar- Pronouns	s – subject, object, possessive,	
Modal ve	erbs	
Course outcome:		
	rse students will be able to	
At the end of the cour	se students will be able to	
CO1	understand the basics of Japanese	Language and its script.
CO2	recognise the foundational vocabu	ılary.
CO3	use simple phrases in everyday co	onversations.
CO4	read simple sentences.	
C05	write simple sentences

## List of Experiment:

S.No.	Fundamental Experiments
1.	WAP that calculate the simple interest and compound interest when principal, rate of interest and time are given.
2.	WAP that swaps values of two variables using a third variable and without using third variable
3.	WAP to compute the roots of quadratic equations.
4.	WAP that accepts the marks of 5 subjects and finds the percentage marks obtained by the student. It also prints grades according to the following criteria:
	Between 90-100%Print 'A'
	80-90%Print 'B'
	60-80%Print 'C'
	Below 60%Print 'D'
5.	WAP to simulate the calculator (Arithmetic operations: +, -, /, *).
6.	Write a menu driven program that computes the area of geometrical figures such as rectangle, square, circle and triangle.
7.	WAP to find the factorial of a given number.

8.	WAP to print the Fibonacci series.
9.	WAP to check whether the entered number is prime or not.
10.	WAP to convert the binary number to decimal number and vice versa
11.	WAP to print allArmstrong numbers from 1 to N.
	Arrays
12.	WAP to find the minimum and maximum element of the array.
13.	WAP to search an element in an array using Linear Search.
14.	Write programs to sort the elements of the array in ascending order using Bubble Sort technique.
15.	WAP to compute the multiplication of two matrices.
	Pointers and Functions
16.	WAP to swap the values of two numbers using the call by pointer.
17.	WAP to compute the factorial of the number using the recursive function factorial ().
18.	WAP to compute the length of the string using the user defined function xstrlen().
19.	WAP to concatenate two strings using the user defined function xstrcat().
	Strings and Structures
20.	WAP to reverse the string. Also check whether the given string is in palindrome or not.
21.	WAP to create structure of a student having member name, roll number, age, marks. Also, create an array of structure of 50 students and display the detail of all the students having marks more than 70.
	File Handling
22.	WAP to copy the contents of one file onto another file.
23.	WAP to compare the contents of two files and determine whether they are same or not.
24.	WAP to check whether the given word exist in a file or not. If yes, then find the number of times it occurs.

25.	WAP to create an array using dynamic memory allocation.				
	Embedded C				
26.	Installation and working with Keil.				
27.	Implement Intruder alarm system.				

Cours	e Code	AME0252	L	Т	P	Credit		
Cours	e Title	Engineering Graphics & Solid Modelling	0	0	3	1.5		
Cours	e objectiv	e:	I					
1	To famili	rize the students with the concepts of Engineerin	ng Graphics	and				
	provide understanding of the drafting, principles, instruments, standards,							
	conventio	conventions of drawings, scales, curves etc.						
2	To impar	knowledge about projections of point, lines and	planes.					
3	To make	the students able tounderstand orthographic pr	rojections o	of sin	mpl	e		
	solids and	their sections and development of curves for late	eral surface	S				
4	To make	hem capable to prepare engineering drawing using	ng CAD sof	ftwa	re.			
5	To make	hem capable to prepare engineering drawing using	ng CREO so	oftw	are.			
Pre-re	equisites:	Knowledge of basic geometry.
