NOIDA INSTITUTE OF ENGINEERING & TECHNOLOGY, GREATER NOIDA, GAUTAM BUDDH NAGAR
(AN AUTONOMOUS INSTITUTE)

A student will be eligible to get Under Graduate degree with Honours only, if he/she completes the additional MOOCs courses such as Coursera certifications, or any other online courses recommended by the Institute (Equivalent to 20 credits). During Complete B.Tech. Program Guidelines for credit calculations are as follows.

1. For 6 to 12 Hours =0.5 Credit
2. For 13 to18 =1 Credit
3. For 19 to 24 =1.5 Credit
4. For 25 to 30 =2 Credit
5. For 31 to 35 =2.5 Credit
6. For 36 to 41 =3 Credit
7. For 42 to 47 =3.5 Credit
8. For 48 and above =4 Credit

For registration to MOOCs Courses, the students shall follow Coursera registration details as per the assigned login and password by the Institute these courses may be cleared during the B. Tech degree program (as per the list provided). After successful completion of these MOOCs courses, the students shall provide their successful completion status/certificates to the Controller of Examination (COE) of the Institute through their coordinators/Mentors only.

The students shall be awarded Honours Degree as per following criterion.

i. If he / she secures 7.50 as above CGPA.

ii. Passed each subject of that degree program in the single attempt without any grace.

iii. Successful completion of MOOCs based 20 credits

Subject Name: Statistics and Probability	**L-T-P [3-1-0]**
Subject Code: BAS0303	**Applicable in Department: DS/AI/AIML/CYS**

Pre-requisites of the Subject: Knowledge of Mathematics I and II of B. Tech or equivalent.

Course Objective: The objective of this course is to familiarize the engineers with concept of Statistical techniques, probability distribution, hypothesis testing and ANOVA and numerical aptitude. It aims to show case the students with standard concepts and tools from B. Tech to deal with advanced level of mathematics and applications that would be essential for their disciplines.

Course Outcomes (CO)

Course outcome: After completion of this course students will be able to:		**Bloom's Knowledge Level(KL)**
CO 1	Understand the concept of moments, skewness, kurtosis, correlation, curve fitting and regression analysis.	K2, K3
CO 2	Understand the concept of Probability and Random variables.	K2, K3
CO 3	Remember the concept of probability to evaluate probability distributions	K1, K3
CO 4	Apply the concept of hypothesis testing and estimation of parameter.	K2
CO 5	Solve the problems of Time & Work, Pipe & Cistern, Time, Speed & Distance, Boat &Stream, Analogy.	K3

Syllabus

Unit No	**Module Name**	**Topic covered**	**Pedagogy**	**Lecture Required (L+P)**	**Practical/ Assignment/ Lab Nos**	**CO Mapping**

1	Descriptive measures	Measures of central tendency – mean, median, mode, measures of dispersion – mean deviation, standard deviation, quartile deviation, variance, Moment, Skewness and kurtosis, least squares principles of curve fitting, Covariance, Correlation and Regression analysis, Correlation coefficient: Karl Pearson coefficient, rank correlation coefficient, uni-variate and multivariate linear regression, application of regression analysis, time series analysis- Trend analysis (Least square method). Applications in Engineering.	Class room Teaching, Smart Board, PPT, M-tutor.	8 L	Assignment 1.1	CO1
2	Probability and Random variable	Probability Definition, The Law of Addition, Multiplication and Conditional Probability, Bayes' Theorem, Random variables: discrete and continuous, probability mass function, density function, distribution function, Mathematical expectation, mean, variance. Moment generating function, Two dimensional random variables: probability mass function, density function. Applications in Engineering.	Class room Teaching, Smart Board, PPT, M-tutor.	8 L	Assignment-2.1	CO2
3	Probability distribution	Probability Distribution (Continuous and discrete- Normal, Exponential, Binomial, Poisson distribution), Central Limit theorem (Statement). Applications in Engineering.	Class room Teaching, Smart Board, PPT, M-tutor.	8 L	Assignment-3.1	CO3
4	Test of Hypothesis & Statistical Inference	Statistical Inference, Parameter estimation, Maximum Likelihood estimation. Sampling and population, uni-variate and bi-variate sampling, re-sampling, errors in sampling, Sampling distributions, Hypothesis testing- p value, z test, t test (For mean), Confidence intervals, F test; Chi-square test, ANOVA: One-way ANOVA. Applications in Engineering.	Class room Teaching, Smart Board, PPT, M-tutor.	8 L	Assignment-4.1	CO4
5		Number System, Permutation & Combination, Probability, Set theory, Function, Non Verbal	Class room Teaching, Smart	8 L	Assignment-5.1	CO5

	Aptitude-III	Reasoning, Data Interpretation, Syllogism.	Board, PPT, M-tutor.

Subject Name: Discrete Structures					**L-T-P [3-1-0]**

Subject Code: BCSE0306					**Applicable in Department: All Branches**

Pre-requisite of Subject: Some basic knowledge of algebra and logic is usually sufficient to begin studying discrete mathematics for computer science. Familiarity with sets, functions, and basic Boolean algebra is also helpful.

Course Objective: The objective of discrete structure is to enable students to formulate problems precisely, solve the problems, apply formal proofs techniques and hence enhance one's logical thinking and problem-solving skills.

Course Outcomes (CO)					

Course outcome: After completion of this course students will be able to:					**Bloom's Knowledge Level(KL)**
CO 1	Apply the basic principles of sets, relations & functions and mathematical induction in computer science & engineering related problems.				K3
CO2	Describe the algebraic structures and it's properties to solve complex problems.				K2
CO3	Describe lattices and it's type to simplify digital circuits.				K2
CO4	Infer the validity of statements and construct proofs using predicate logic formulas.				K4
CO5	Design and use non-linear data structure like graphs to solve real world problems.				K4

Syllabus					

Unit No	**Module Name**	**Topic covered**	**Pedagogy**	**Lecture Required (L+P)**	**Practical/ Assignment/ Lab Nos**	**CO Mapping**
1	Module 1.1:	Set Theory: Definition of sets, countable and uncountable sets, Set operations, Partition of set,	Lecture Notes, PPT,	8 L	NA	CO1

Set Theory & Relations	Set Theory	Cardinality, Venn Diagrams, proofs of some general identities on sets. **Applications of set Theory**	Online Videos & R2			
	Module 1.2: Relations	Relation: Definition, types of relation, composition of relations, Equivalence relation, Partial ordering relation. **Applications of Relations**	Lecture Notes, PPT, Online Videos & R2			
2 Algebraic Structures	Module 2.1: Algebraic Structures	Definition, Properties, types: Semi Groups, Monoid, Groups, Abelian group, Properties of groups, Subgroup, cyclic group, Permutation group, Cosets, Normal subgroup, Homomorphism and isomorphism of Groups. Applications of Algebraic Structure	Lecture Notes, PPT, Online Videos & R2	8 L	NA	CO2
3 Posets, Hasse Diagram and Lattices	Module 3.1: Posets, Hasse Diagram and Lattices:	Introduction, ordered set, Hasse diagrams of partially ordered set, isomorphic ordered set, well ordered set, properties of lattices, types of lattices. Applications of Lattice	Lecture Notes, PPT, Online Videos & R2	8 L	NA	CO3
4 Proposition al & Predicate Logic	Module 4.1: Propositional Logic	Propositions and compound Propositions, Basic logical operations, truth tables, tautologies, Contradictions, CNF, DNF Algebra of Proposition, logical implications, logical equivalence, predicates and quantifiers, Rules of Inference Application of Propositional Logics.	Lecture Notes, PPT, Online Videos & R1			
	Module 4.2: Predicate Logic	First order predicate, Well-formed formula of Predicate, Quantifiers, Inference Theory of Predicate Logic Application of Predicate Logics.	Lecture Notes, PPT, Online Videos & R2	8 L	NA	CO4
5	Module 5.1: Graphs	Definition and terminology, Representation of Graphs, Paths connectivity, Walks, Paths, Cycles, Bipartite, Regular, Planar and connected graphs, Components, Euler graphs, Euler's theorem,	Lecture Notes, PPT, Online Videos & R2	8 L	NA	CO5

Graphs		Hamiltonian path and circuits, Graph coloring, chromatic number, isomorphism and homomorphism of graphs. Application of Graphs

Subject Name: Operating Systems	L-T-P [3-0-0]
Subject Code: BCSCY0301	Applicable in Department: CYS

Pre-requisite of Subject: Basic knowledge of computer fundamentals, C programming, Data structure and Computer organization.

Course Objective: The objective of this course is to provide an understanding of the basic and modern concepts of operating system and deliver the skills needed to develop and customize Linux shell programming

Course Outcomes (CO)

Course outcome: After completion of this course students will be able to:		Bloom's Knowledge Level(KL)
CO1	Understand various operating systems architecture with utilizing the command line interface (CLI) within a Linux environment.	K2
CO2	Understand and implement the various CPU scheduling algorithms.	K4
CO3	Analyse deadlock, concurrency, and synchronization into the system architecture.	K4
CO4	Identify and implement the memory management techniques and algorithms.	K3
CO5	Analyse file management system and implement distributed and virtual machine configurations on modern operating systems.	K4

Syllabus

Unit No	Module Name	Topic covered	Pedagogy	Lecture Required (L+P)	Practical/ Assignment/ Lab Nos	CO Mapping
1 Fundamentals & Shell scripting	Module 1.1: Fundamentals of Operating Systems	Overview of Operating Systems, Operating system architecture, Types of Operating System: Batch OS, Multiprogramming OS, Multitasking OS, Multiprocessor OS, Real time OS, System call and kernel,	Lectures, PPTs, Notes and Smart Interactive Panel	4L+8P	Experiment/ Program 1.1 to 1.4	CO1

	Module 1.2: Shell Scripting in Linux	Introduction to Linux Operating System, Basic Command Line Interface (CLI) Operations in Linux, Shell Scripting Basics: Variables, Control Structures, Functions				
2 Process Management	Module 2.1: Process Management	Process Performance Criteria, Process Transition Diagram, Process Control Block (PCB), Types of Schedulers: Long Term, Mid Term, Short Term Scheduler, CPU Scheduling- Pre-emptive and Non-Pre-emptive Algorithm (FCFS, SJF, SRTF, Non-Pre-emptive Priority, Pre-emptive Priority, Round Robin, Multilevel Queue Scheduling and Multilevel Feedback Queue Scheduling), Processes and Threads, Linux Process Management: ps, top, kill, nice	Lectures, PPTs, Notes and Smart Interactive Panel	8L+12P	Experiment/ Program 1.1 to 1.4	CO2
3 Concurrency and Deadlock Management	Module 3.1: Concurrency and Deadlock Management	**Concurrency**: Race Condition, Critical Section, Inter Process Communication, Classical problem: Producer consumer, Dinning Philosopher, Reader writer, Sleeping barber, **Process Synchronization**: Lock variable, Peterson's Solution, Strict alternation, Lamport Bakery Solution, Test and set lock, and semaphore- counting, binary and monitor, **Deadlock:** Deadlock characterization, Prevention, Deadlock Avoidance: Bankers Algorithms, Deadlock detection, Recovery from Deadlock	Lectures, PPTs, Notes and Smart Interactive Panel	8L+8P	Experiment/ Program 1.1 to 1.4	**CO3**
4 Memory Management	Module 4.1: Memory Management	Memory Management function, Loading and linking Address Binding, Memory management techniques, Contiguous technique- Fixed Partitions, variable	Lectures, PPTs, Notes and Smart Interactive Panel	8L+10P	Experiment/ Program 1.1 to 1.4	CO4

		partitions, Memory Allocation: Allocation Strategies (First Fit, Best Fit, and Worst Fit), Non-contiguous, Paging, Segmentation, Segmented paging, Virtual Memory Concepts, Demand Paging, Performance of Demand Paging, Page Replacement Algorithms: FIFO, LRU, Optimal and LFU, Belady's Anomaly, Thrashing				
5 File Management & Modern Operating System	Module 5.1: File Management	File Management: Access Mechanism, File Allocation Method, Free Space Management: -Bit Vector, Linked List, DISK: Disk Architecture, HDD vs SDD, Disk Scheduling	Lectures, PPTs, Notes and Smart Interactive Panel	4L+10P	Experiment/ Program 1.1 to 1.4	CO5
	Module 5.2: Modern Operating System	Modern Operating System: -Overview of modern operating system, Shared Memory concepts, Distributed system, Parallel system & its architecture, Virtual machines – hyperviser, Introduction to GPUs **Case Study:** Large File Storage in a Distributed Manner				
Total					**(32T+48P) = 80 Hours**

Subject Name: Data Structures and Algorithms-I		**L-T-P [3-0-0]**
Subject Code: BCSE0301	**Applicable in Department: CSE/IT/CS/AI/AIML/IOT/DS/CYS**	
Pre-requisite of Subject: C, Python		
Course Objective: The objective of the course is to learn the basic concepts of algorithm analysis, along with implementation of linear data structures.		

Course Outcomes (CO)		
Course outcome: After completion of this course students will be able to:		**Bloom's Knowledge Level(KL)**
CO 1	Understand the concept of algorithm analysis and its importance for problem solving.	K1
CO2	Implementation of Arrays for searching, sorting and hashing to foster critical thinking.	K3
CO3	Compare and contrast linked list with arrays and implementation of linked list with its applications.	K4
CO4	Understand static and dynamic implementation of stacks, while mastering principle of recursion for effective problem-solving.	K4
CO5	Implementation and analysis of divide & conquer algorithms and greedy approach for efficient problem-solving across diverse contexts.	K4

Syllabus						
Unit No	**Module Name**	**Topic covered**	**Pedagogy**	**Lecture Required (L+P)**	**Practical/ Assignment / Lab Nos**	**CO Mapping**
1 Introduction to Data Structure and	Module 1.1: Foundation of Algorithms Analysis and Design	Algorithms, Analysing Algorithms, Complexity of Algorithms, Amortized Analysis, Growth of Functions, Methods of solving Recurrences, Performance Measurements	Lectures, Code Walkthroughs, Hand-on Programming, Problem Solving, Collaborative Learning,	8L+6P	Program to compare the time complexities of various algorithms by	CO1

Algorithms		Time and Space Complexity of an algorithm, Asymptotic notations (Big Oh, Big Theta and Big Omega), Abstract Data Types (ADT).	competitive coding Projects, Assessments.		plotting the graph	
	Module 1.2: Fundamentals of D.S.	Data types: Primitive and non-primitive, Introduction to Data structure, Types of Data Structures- Linear & Non-Linear Data Structures.				
2 Design and Analysis of Algorithms: Arrays , searching and sorting, Hashing	Module 2.1: Arrays	Arrays: Definition, Single and Multidimensional Arrays, Representation of Arrays: Row Major Order, and Column Major Order, Derivation of Index Formulae for 1-D,2-D,3-D and n-D Array Application of Arrays: Sparse Matrices and their Representations.	Lectures, Code Walkthroughs, Hand-on Programming, Problem Solving, Collaborative Learning, competitive coding, Projects, Assessments	8L+12P	Implementation of Arrays, Row Major Order, and Column Major Order, Representation of sparse matrix, Linear search, Binary search.	CO2
	Module 2.2: Searching and Sorting	Searching algorithm with analysis: Linear search, Binary search. Sorting algorithm with analysis: Bubble sort, Insertion sort, Selection sort, Shell Sort, Sorting in Linear Time- Counting Sort.				
	Module 2.3: Hashing	Hashing: The symbol table, Hashing Functions, Collision-Resolution Techniques, hashing for direct files.				
3 Design and Analysis of Algorithms: Linked lists Data Structure	Module 3.1: Linked List	Comparison of Array, List and Linked list Types of linked list: Singly Linked List, Doubly Linked List, Circular Linked List Polynomial Representation and Addition of Polynomials	Lectures, Code Walkthroughs, Hand-on Programming, Problem Solving, Collaborative Learning, competitive coding, Projects, Assessments.	8L+12P	Operations on a Linked List: Insertion, Deletion, Traversal, Reversal, Searching	CO3

4	Module 4.1: Stacks	Primitive Stack operations: Push & Pop, Array and Linked List Implementation of Stack, Application of stack: Infix, Prefix, Postfix Expressions and their mutual conversion, Evaluation of postfix expression.	Lectures, Code Walkthroughs, Hand-on Programming, Problem Solving, Collaborative Learning, Projects, Assessments.	8L+12P	Operations on stacks and question. Recursion Application	CO4
Design and Analysis of Algorithms based: Stacks Data Structure and Recursion	Module 4.2: Recursion					
	Module 4.3: Queue	Principles of recursion, Tail recursion, Removal of recursion, Problem solving using iteration and recursion with examples such as binary search, Fibonacci series, and Tower of Hanoi, Trade-offs between iteration and recursion. Merge sort and Quick sort algorithms with analysis.				
		Array and linked List implementation of queues, Operations on Queue: Create, Insert, Delete, Full and Empty, Circular queues, Dequeue and Priority Queue algorithms with analysis				
5 Design and Analysis of Algorithms: Queues Data Structure	Module 5.1: Divide and Conquer and Greedy Methods	Divide and Conquer concepts with Examples Such as Quick sort, Merge sort, Convex Hull. Greedy Methods with Examples Such as Activity Selection, Task Scheduling, Fractional Knapsack Problem.	Lectures, Code Walkthroughs, Hand-on Programming, Problem Solving, Collaborative Learning, Projects, Assessments.	8L+6P	Divide and conquer methods and greedy methods	CO5
Total No. of Lecture + Practical Labs			**(40L+40P) = 88**

Subject Name: Logic Design and Computer Architecture	L-T-P [3-0-0]

Subject Code: BCSAI0302	Applicable in Department: AI/AIML/DS/CS/CYS

Pre-requisite of Subject: 1. Basic knowledge of computer systems.
2.   Logic gates and their operations.

Course Objective: To understand the types of organizations, structures, and functions of computers, design of arithmetic and logic units, and float point arithmetic. To understand the concepts of the memory system, communication with I/O devices, and interfaces.

Course Outcomes (CO)

Course outcome: After completion of this course students will be able to:		Bloom's Knowledge Level (KL)
CO1	Explain the basics of Digital Logic Fundamentals	K1, K2
CO2	Analyze the Functional units of a computers	K2, K3
CO3	Implement the Arithmetic Logic and Control Units	K2, K4
CO4	Understand the basic of Memory Organization	K2, K4, K5
CO5	Explain different ways of communicating with I/O devices	K2, K4, K5

Syllabus

Unit No	Module Name	Topic covered	Pedagogy	Lecture Required (L+P)	Practical/ Assignment/ Lab Nos	CO Mapping

1	Digital Logic Fundamental	Basic of Number System, Boolean Algebra and Logic gates, Introduction of Combinational Logic Circuits: Adders, Substractors, Multiplexers, Demultiplexers, Encoder and Decoder. Basics of Sequential Logic Circuits: Flip-Flops, Register and Counters.	Lecture, Numerical Discussion	8 L	Assignment/Practical/Quizzes	CO1
2	Computer Basics	Functional units of a Digital System and their Interconnections, Buses: Types of Buses, Bus Arbitration and its types. Register and Memory Transfer, Processor Organization: General Registers Organization, Single Accumulator Organization and Stack Organization. Instruction format and Addressing modes.	Lecture, Numerical Discussion	8 L	Assignment/Practical/Quizzes	CO2
3	Arithmetic Logic Unit and Control Unit	**ALU:** Carry look-ahead Adder. Multiplication: Signed operand multiplication, Booth's Algorithm and Array Multiplier, Division. Floating-point Arithmetic Operation, 1-bit ALU. IEEE Standard for Floating-Point Numbers. **CU:** Instruction: Instruction types, Instruction cycles and Sub-cycles, Micro-operations and Execution of a complete Instruction. RISC, CISC Architecture. Hardwire and Microprogrammed Control	Lecture, Numerical Discussion	8 L	Assignment/Practical/Quizzes	CO3

		Unit.				
4	Memory Organization	Memory hierarchy concept, RAM: SRAM and DRAM, ROM and SSD. Locality of reference property, Cache Memory: Concept with Design issues, Hit ratio, Address Mapping, Page Replacement Algorithm: FIFO, LRU, LIFO and Optimal page.	Lecture, Numerical Discussion	8 L	Assignment/Practical/Quizzes	CO4
5	Peripheral Devices and Parallel Processing	Peripheral devices, I/O ports and Interfacing, Types of interrupts. Modes of Data Transfer: Programmed I/O, Interrupt Initiated I/O and Direct Memory Access. Serial Communication: Synchronous & Asynchronous communication. Arithmetic and Instruction pipeline, Hazards and Concepts of Parallel Processing.	Lecture, Numerical Discussion	8 L	Assignment/Practical/Quizzes	CO5
Total				**40 Hours**

	NOIDA INSTITUTE OF ENGINEERING AND TECHNOLOGY
	GREATER NOIDA-201306
	(An Autonomous Institute)
	School of Computer Science in Emerging Technology

Subject Name: Object Oriented Techniques using Java	**L-T-P [0-0-6]**

Subject Code: BCSE0352	**Applicable in Department: CSE/IT/AI/AIML/DS/CYS/CS**

Pre-requisites of the Subject: 1. Student must know at least the basics of computer skills, and should be able to start a command line shell.
2. Knowledge of basic programming concepts.

Course Objective- The objective of this course is to understand the object-oriented methodology, and its techniques to design stand alone and GUI applications using hands-on engaging activities.

Course Outcomes (CO)

Course outcome: After completion of this course students will be able to:		**Bloom's Knowledge Level (KL)**
CO 1	Understand the concepts of object-oriented programming and relationships among them needed in modeling.	K2
CO2	Demonstrate the Java programs using OOP principles and also implement the concepts of lambda expressions.	K3
CO3	Analyze packages with different protection level resolving namespace collision and implement the error handling concepts for uninterrupted execution of Java program.	K4
CO4	Implement Concurrency control, I/O Streams and Annotations concepts by using Java program.	K3
CO5	Design and develop the GUI based application, Generics and Collections in Java programming language to solve the real-world problem.	K6

Syllabus

Unit No.	Module Name	Topic covered	Pedagogy	Lecture Required (L+P)	Practical/ Assignment/ Lab Nos	CO Mapping
1 Basics of Java	Module 1.1: Object	Introduction and Pillars of OOP with real life example, jvm architecture and its components	T1, R1, Smart Board/PPT/	1 L + 2 P	Setting class path variables, Compilation of	CO 1

Programming	Oriented Programming			Online Programs		java file and execute its byte code.	
	Module 1.2: Modelling Concepts	Introduction, Class Diagram and Object Diagram, UML concepts: Association, Composition, aggregation, realization, and Generalization.			1 L + 2 P	Designing object and class diagram with UML concepts.	
	Module 1.3: Control Statements	Decision Making, Looping and Branching, Argument Passing Mechanism: Command Line Argument, Console Input.			1 L + 3 P	Implementation of java programs on control statements.	
	Module 1.4: Class and Object	Object Reference, Constructor, Abstraction: Abstract Class, Interface and its uses, Defining Methods, Use of "this" and "super" keyword, Garbage Collection and finalize () Method etc.			2 L + 6 P	Implementation of Java Basics, Class, Object, abstract class interface, garbage collection.	
2 OOPs features, arrays and lambda expressions	Module 2.1: Inheritance	Overview and Types of Inheritance in Java, Access Modifiers, Constructors and super constructor in Inheritance.		T1, R1, Smart Board/PPT/ Online Programs	1 L + 3 P	Implementation of inheritance concept.	CO2
	Module 2.2: Polymorphism	Introduction and Types of Polymorphism, Overloading and Overriding			1 L + 3 P	Implementation of polymorphism concept.	
	Module 2.3: Lambda expression	Introduction and Working with Lambda Variables.			1 L + 1 P	Programs based on Lambda expression.	
	Module 2.4: Arrays	Introduction to Arrays and its Types.			1 L + 3 P	Programs based on array concept.	
3 Packages, Exception Handling	Module 3.1: Packages	Introduction to Packages and its Types, Access Protection in Packages, Import and Execution of Packages.		T1, R1, Smart Board/PPT/ Online	1 L + 2 P	Implementation of java package, Exception handling,	CO3
	Module	Exceptions vs. Errors, Handling of Exception. Finally, Throws and			2 L + 3 P		

and String Handling	3.2: Exception Handling, Assertions and Localizations	Throw keyword, Multiple Catch Block, Nested Try and Finally Block, Tokenizer. Assertions and Localizations Concepts and its working.	Programs		Assertion, Localization and String handling	
	Module 3.3: String Handling	String Types, Operations, Immutable String, Method of String class, String Buffer and String Builder class.		2 L + 3 P		
4 Concurrency in Java and I/O Stream	Module 4.1: Threads	Overview of Threads, Creating Threads, Thread Life-Cycle, Thread Priorities, Daemon Thread, Runnable Class, Synchronizing Threads etc.	T2, R2, Smart Board/PPT/ Online Programs	2 L + 2 P	Implementation of Multi-threading, Annotation, Character and Byte Stream classes java.io package.	CO4
	Module 4.2: I/O Stream	Common I/O Stream Operations, Interaction with I/O Streams Classes.		1 L + 2 P		
	Module 4.3: Annotations	Introduction, Custom Annotations and Applying Annotations.		1 L + 2 P		
5 GUI Programming, Generics and Collections	Module 5.1: GUI Programming	Swing, AWT, Components and Containers, Layout Managers and User-Defined Layout and Event Handling.	T2, R2, R3 Smart Board/PPT/ Online Programs	2 L + 2 P	Implementation of AWT & Swing components, Layout Manager classes, Generic & Collection, and Wrapper classes	CO5
	Module 5.2: Generics	Introduction to Generic Classes, Initializing a Generic Object, Generic Cell Driver Class, Generic Methods, Use enumerated type.		1 L + 4 P		
	Module 5.3: Collections	Introduction to Collections, Using Method References, Using Wrapper Class, Using Lists, Sets, Maps and Queues, Collection using Generics, Iterators		2 L + 4 P		
Total				**(23T+47P) = 70 Hours**		

List of Practicals

Sr. No.	Program Title	CO Mapping
1	Understanding Text Editors to Write Programs, Compile and run first java file and Byte Code and class file	CO1
2	Sketch a class and object diagram by describing the sales order system of a restaurant.	CO1
3	Sketch a class diagram by describing the circle and rectangle class.	CO1
4	Sketch a class diagram for a college platform including, classroom, playground, chair, table, smart board, teaching staff etc.	CO1
5	Sketch a class diagram containing class called Employee, which models an employee with an ID, name and salary. Add method raisesalary(percent) that increases the salary by the given percentage.	CO1
6	Program to display the default value of all Primitive data types	CO1
7	Implement the code using main() method to calculate and print the **Total** and **Average Marks** scored by a student from the input given through the command line arguments and assume that four command line arguments **name, marks1, marks2, marks3** will be passed to the main() method in the below class with name **TotalAndAvgMarks**.	CO1
8	Write code which uses if-then-else statement to check if a given account balance is greater or lesser than the minimum balance. Write a class BalanceCheck with public method checkBalance that takes one parameter balance of type double. Use if-then-else statement and print Balance is low if balance is less than 1000. Otherwise, print Sufficient balance.	CO1
9	A class NumberPalindrome with a public method isNumberPalindrome that takes one parameter number of type int. Write a code to check whether the given number is palindrome or not. For example Cmd Args : 333 333 is a palindrome	CO1
10	Write a class FibonacciSeries with a main method. The method receives one command line argument. Write a program to display fibonacci series i.e. 0 1 1 2 3 5 8 13 21	CO1
11	Write a Java Program to find the Factorial of a given number.	CO1
12	Java Program to create a class, methods and invoke them inside main method.	CO1
13	• Write a Java program to illustrate the abstract class concept. Create an abstract class Shape, which contains an empty method numberofSides(). • Define three classes named Trapezoid, Triangle and Hexagon extends the class Shape, such that each one of the classes contains only the method numberofSides(), that contains the number of sides in the given geometrical figure. • Write a class AbstractExample with the main() method, declare an object to the class Shape, create instances of each class and call numberofSides() methods of each class.	CO1

14	Java program to illustrate the static field in the class.	CO1
15	Java Program to illustrate static class.	CO1
16	Write a java program to access the class members using super keyword	CO1
17	Java program to access the class members using this keyword	CO1
18	Implement an interface named MountainParts that has a constant named TERRAIN that will store the String value "off_road". The interface will define two methods that accept a String argument name newValue and two that will return the current value of an instance field. The methods are to be named: getSuspension, setSuspension, getType , setType.	CO1
19	Java program to demonstrate nested interface inside a interface.	CO1
20	Java program to demonstrate nested interface inside a class.	CO1
21	Java program to explicit implementation of garbage collection by using finalize() method	CO1
22	JAVA program to implement Single Inheritance	CO2
23	JAVA program to implement multi-level Inheritance	CO2
24	JAVA program to implement constructor and constructor overloading.	CO2
25	JAVA program implement method overloading.	CO2
26	JAVA program to implement method overriding.	CO2
27	Java program to implement lambda expression without parameter.	CO2
28	Java program to implement lambda expression with single parameter.	CO2
29	Java program to implement lambda expression with multi parameter.	CO2
30	Java program to implement lambda expression that iterate list of objects	CO2
31	Java program to define lambda expressions as method parameters	CO2
32	Write a class CountofTwoNumbers with a **public** method compareCountof that takes three parameters one is arr of type int[] and other two are arg1 and arg2 are of type int and returns true if count of arg1 is greater than arg2 in arr. The return type of compareCountof should be boolean. Assummptions: • arr is never null • arg1 and arg2 may be same	CO2

33	JAVA program to show the multiplication of two matrices using arrays.	CO2
34	Java Program to search an element using Linear Search	CO2
35	Java program to search an element using Binary Search	CO2
36	Java Program to sort element using Insertion Sort	CO2
37	Java Program to sort element using Selection Sort – Largest element Method	CO2
38	java program to Sort elements using Bubble Sort	CO2
39	Java program to create user defined package.	CO3
40	Java Program to create a sub- classing of package	CO3
41	Implement the following: • Import package.*; • import package.classname; • Using fully qualified name.	CO3
42	Implement and demonstrate package names collision in java	CO3
43	Java program to handle and Arithmetic Exception Divided by zero	CO3
44	Java Program to implement User Defined Exception in Java	CO3
45	Java program to illustrate finally block	CO3
46	Java program to illustrate Multiple catch blocks	CO3
47	Java program for creation of illustrating throw in exception handling.	CO3
48	Implement the concept of Assertion in Java Programming Language	CO3
49	Implement the concept of Localization in Java Programming Language.	CO3
50	Java program to print the output by appending all the capital letters in the input string.	CO3
51	Java program that prints the duplicate characters from the string with its count.	CO3
52	Java program to check if two strings are anagrams of each other	CO3
53	Java Program to count the total number of characters in a string	CO3
54	Java Program to count the total number of punctuation characters exists in a String	CO3
55	Java Program to count the total number of vowels and consonants in a string	CO3

56	Java Program to show .equals method and == in java	CO3
57	Given a string, return a new string made of n copies of the first 2 chars of the original string where n is the length of the string. The string may be any length. If there are fewer than 2 chars, use whatever is there. If input is "Wipped" then output should be "WiWiWiWiWi".	CO3
58	Given two strings, a and b, create a bigger string made of the first char of a, the first char of b, the second char of a, the second char of b, and so on. Any leftover chars go at the end of the result. If the inputs are "Hello" and "World", then the output is "HWeolrllod".	CO3
59	JAVA program to show the usage of string builder.	CO3
60	JAVA program to show the usage of string buffer.	CO3
61	Creating and Running a Thread	CO4
62	Implementing Runnable Interface	CO4
63	Synchronizing Threads with lock	CO4
64	Synchronizing Threads without lock	CO4
65	JAVA program to implement even and odd threads by using Thread class .	CO4
66	JAVA program to implement even and odd threads by using Runnable interface.	CO4
67	JAVA program to synchronize the threads by using Synchronize statements and Synchronize block.	CO4
68	Demonstrate the concept of type annotations in the JAVA programming language.	CO4
69	Demonstrate the concept of user-defined annotations in the JAVA programming language.	CO4
70	JAVA program to implement that read a character stream from input file and print it into output file.	CO4
71	JAVA program to implement that merge the content of two files (file1.txt, file2.txt) into file3.txt.	CO4
72	Write a Java program that reads the contents of one file and copies them to another file.	CO4
73	Write a Java program that reads a text file and counts the number of words in it.	CO4
74	Write a Java program that reads a text file and counts the frequency of each word in it.	CO4
75	Write a Java program that reads a text file and adds line numbers to each line. The program should create a new file with the line numbers added to the beginning of each line.	CO4
76	Write a Java program that reads two binary files and compares them byte by byte to determine if they are identical. Display a message indicating whether the files are the same or different.	CO4

77	Program to create a frame with three button in AWT and swing	CO5
78	Program to display message with radio buttons in swing	CO5
79	Program to display "All The Best" in 5 different colors on screen. (Using AWT/Swing)	CO5
80	Program to implement event handling in a button "OK"	CO5
81	Java Program to implement BorderLayout	CO5
82	Java Program to implement GridLayout	CO5
83	Java Program to implement BoxLayout	CO5
84	Java Program to implement CardLayout	CO5
85	Java program to implement Generic class	CO5
86	Java program to illustrate Generic methods	CO5
87	Java program to implement wildcard in generics	CO5
88	Java program to implement of methods of HashSet	CO5
89	Java Program to implement methods available in HashMap class	CO5
90	Program to add, retrieve, and remove element from ArrayList	CO5
91	Create a method which can accept a collection of country names and add it to ArrayList with generic defined as String and return the List.	CO5
92	Create a method which can create a HashSet containing values 1-10. The Set should be declared with the generic type Integer. The method should return the Set.	CO5
93	Java program to implement autoboxing	CO5
94	Java program to implement unboxing	CO5
95	Develop a java class with a method *storeEvenNumbers(int N)* using ArrayList to store even numbers from 2 to N, where N is a integer which is passed as a parameter to the method *storeEvenNumbers().* The method should return the ArrayList (A1) created.	CO5
96	Create a method that accepts the names of five countries and loads them to an array list and returns the list.	CO5
97	Create a method which can accept a collection of country names and add it to ArrayList with generic defined as String and return the List.	CO5

NOIDA INSTITUTE OF ENGINEERING AND TECHNOLOGY
GREATER NOIDA-201306
(An Autonomous Institute)
School of Computer Science in Emerging Technology

Subject Name: Data Structures and Algorithms-I Lab	**L-T-P [0-0-4]**

Subject Code: BCSE0351	**Applicable in Department: CSE/IT/CS/AI/AIML/IOT/ DS/CYS**

Pre-requisite of Subject: C, Python

Lab Experiments

Course Objective: Learn to implement linear data structures.

Course Outcomes (CO)

Course outcome: After completion of this course students will be able to:	Bloom's Knowledge Level(KL)
CO 1	Implementing Single and Multi-dimensional array with their applications like searching and Sorting techniques.	K3
CO2	Implement Link list, Stack and Queues with their applications.	K3
CO3	Implementation and analysis of various Divide and Conquer, Greedy Algorithms.	K4
List of Practicals		

Sr. No	Program Title	CO Mapping
1	Construct a program to compare the time complexities of selection, bubble and insertion sort by plotting the graph	CO1
2	Construct a program to compare the time complexities of various algorithms by varying size "n".	CO1

3	Construct a Code to find the maximum element in an array.	CO2
4	Construct a Code to calculate the sum of all elements in an array.	CO2
5	Construct a Code to reverse the elements of an array.	CO2
6	Construct a Code to check if an array is sorted in ascending order.	CO2
7	Construct a Code to count the occurrence of a specific element in an array.	CO2
8	Construct a Code creation and traversal of 2D Array in row major and column major order.	CO2
9	Construct a code to print the transpose of a given matrix using function	CO2
10	Program to find if a given matrix is Sparse or Not and print Sparse Matrix	CO2
11	Construct a code to represent a sparse matrix in triplet form.	CO2
12	Construct a code to Implement Linear Search	CO2
13	Construct a code to implement Binary Search	CO2
14	Construct a program to Implement Selection Sort	CO2
15	Construct a program to Implement Bubble Sort	CO2
16	Construct a program to Implement Insertion Sort	CO2
17	Construct a program to Implement Shell Sort	CO2
18	Construct a program to Implement Counting Sort	CO2
19	Create a single linked list and perform basic operations (insertion, deletion, traversal).	CO3
20	Create a double linked list and perform basic operations (insertion, deletion, traversal).	CO3
21	Create a circular linked list and perform basic operations (insertion, deletion, traversal).	CO3
22	Create a circular double linked list and perform basic operations (insertion, deletion, traversal).	CO3
23	Reverse a single linked list.	CO3
24	Check if a linked list is palindrome.	CO3

25	Reverse a double linked list.	CO3
26	Find the middle element of a single linked list.	CO3
27	Find the middle element of a double linked list.	CO3
28	Merge two sorted single linked lists.	CO3
29	Detect and remove a loop in a circular linked list.	CO3
30	Construct a code to add two polynomials using linked list	CO3
31	Construct a program to Implement stack using array	CO3
32	Construct a program to Implement stack using a linked list	CO4
33	Construct a code to Infix to postfix conversion using a stack	CO4
34	Construct a code for Balanced parentheses checker using a stack	CO4
35	Implement Reverse a string using a stack.	CO4
36	Implement Binary Search using Recursion.	CO4
37	Construct a python program to print Fibonacci Series using Recursion.	CO4
38	Construct a code to implement Tower of Hanoi.	CO5
39	Construct a program to Implement queue using array.	CO5
40	Construct a code for Implementing a circular queue.	CO5
41	Construct a program to Implement queue using stack	CO5
42	Construct a program to Implement priority queue	CO5
43	Construct a program to Implement double ended queue	CO5

44	Construct a program to Implement Merge Sort with recursion	CO5
45	Construct a program to Implement Quick Sort with recursion	CO5
46	Construct a program to Implement Merge Sort using iteration	CO5
47	Construct a program to Implement Quick Sort using iteration	CO5
48	Construct a program to Implement fractional knapsack	CO5
49	Construct a program to Implement Activity selection problem	CO5
50	Construct a program to Implement Job scheduling problem	CO5
*Competitive coding list will be shared with the students.		

Subject Name: Operating Systems Lab	L-T-P [0-0-2]
Subject Code: BCSCY0351	**Applicable in Department: CYS**

Pre-requisite of Subject: Basic knowledge of computer fundamentals, C programming, Data structure and Computer organization.

Course Objective: 1. This course gives an ability to Hands-on and practical experience with usage of the Linux OS and basics of Shell Programming.
2. The OS Lab aims to provide an experience to implement and analyze algorithms related to process management, CPU scheduling, memory management, file systems, and concurrency control and simulate modern operating systems.

<div align="center">

Course Outcomes (CO)

</div>

Course outcome: After completion of this course students will be able to:		Bloom's Knowledge Level(KL)
CO1	Execute the Linux file system using basic shell commands.	K3
CO2	Implement CPU Scheduling Algorithms, Process Synchronization and deadlock handling techniques.	K3
CO3	Simulate memory allocation concepts, as well as distributed and virtual machine configurations, on modern operating systems.	K3

<div align="center">

List of Practicals

</div>

Sr. No.	Program Title	CO Mapping
	Variables and Control Structures:	**CO1**
1	Write a shell script to determine the Area and Perimeter of a Rectangle.	CO1
2	Write a shell script to count the words, characters, and lines in the file.	CO1

3	Write a shell script that calculates the sum and average of an array of numbers	CO1
4	Write a shell script to calculate the Fibonacci sequence.	CO1
5	Write a shell script that finds prime numbers inside a user-specified range.	CO1
6	Write a shell script to determine whether a given string is palindrome.	CO1
	File Manipulation:	
7	Write shell script that allows users to create, delete, and list files in a directory.	CO1
8	Write a shell script that Count Lines in Each File in a Directory.	CO1
9	Write a shell script that find and Replace Text in Files.	CO1
10	Write a shell script that find Files Modified in the Last N Days.	CO1
	Directory Navigation:	
11	Write a shell script to list contents of a directory.	CO1
12	Write a shell script to change directory (cd) based on user input.	CO1
13	Write a shell script to navigate to the directory that contains a specific file.	CO1
	Process Management:	
14	Write a shell Script to display running processes and their details.	CO1
15	Write a shell Script to kill processes based on name or ID.	CO1
16	Write a shell Script to automatically Restart a Process if it Crashes	CO1
	User/Group Management:	
17	Write a shell Script to create, modify, and delete user accounts.	CO1
18	Write a shell Script to add or remove users from groups.	CO1
	Toolkit of Shell Scripts Demonstrating Shell Scripting of Functions:	
19	Write a shell script to file Backup Script with Custom Retention Policy	CO1
20	Write a shell script for database Backup and Restore Script.	CO1
21	Write a shell script for Network Configuration Script with Error Handling	

		Intercepting System Calls Using Dynamic Tracing Tools:	CO1
22		Write a shell Script to intercept system calls using strace and log process ID, system call name, arguments, and return values.	CO1
23		Write a shell Script to intercept library calls using ltrace and capture similar information.	CO1
24		Write a shell script to monitor process forks using "ps"	CO1
		Collecting and Analyzing Network Statistics:	
25		Write a shell script to collect packet counts using tools like tcpdump or tshark.	CO1
26		Write a shell script to measure bandwidth usage using iftop or nload.	CO1
27		Write a shell script to analyze latency using ping or traceroute.	CO1
28		Write a shell script to check connection status using netstat or ss.	CO1
29		Write a shell script to visualize network data using gnuplot or matplotlib for graphs and charts.	CO1
		Miscellaneous Commands:	
30		Print Current Date and Time: Write a shell script to Display the current date and time using date command.	CO1
31		Generate Random Password: Write a shell script to Use openssl rand to generate a random password.	CO1
		View System Information:	CO1
32		Write a shell script to show system information like kernel version, CPU info, etc., using uname, lscpu, etc.	CO1
33		Display System Uptime: Write a shell script to show system uptime using uptime command.	CO1
34		View Disk Usage: Write a shell script to Display disk space usage of files and directories using du and df commands.	CO1
35		Check System Load: Write a shell script to monitor system load averages using w or top commands.	CO1
36		Display Calendar: Write a shell script to show the calendar for a specific month using cal.	CO1
37		Search Text in Files: Write a shell script to Use grep to search for specific text within files.	CO1
38		Count Lines in a File: Write a shell script to Use wc -l to count the number of lines in a file.	CO1
39		Check System Users: Write a shell script to Display currently logged-in users using who or w commands.	CO1
40		Implement FCFS CPU Scheduling algorithm.	CO2
41		Implement the given CPU Scheduling algorithm a) SJF b) Priority Based	CO2

42	Implement Multi-level Queue CPU Scheduling algorithm.	CO2
43	Implement PRIORITY CPU Scheduling Algorithm (For both Pre-emptive and non-pre-emptive).	CO2
44	Implement Round-Robin CPU Scheduling Algorithm	CO2
45	Implement Multilevel Queue CPU Scheduling Algorithm.	CO2
46	Execute the RACE Condition of Process Synchronization.	CO3
47	Implement the Producer–consumer problem using semaphores.	CO3
48	Design a code and implement the Dinning Philosopher problem	CO3
49	Execute an algorithm for deadlock detection.	CO3
50	Implement Banker's algorithm of Deadlock Avoidance	CO3
51	Implement Contiguous memory fixed size partition scheme.	CO4
52	Implement Contiguous memory variable size partition scheme.	CO4
53	Simulate the First-Fit contiguous memory allocation technique.	CO4
54	Simulate the Best-Fit contiguous memory allocation technique.	CO4
55	Simulate the Worst-Fit contiguous memory allocation technique.	CO4
56	Implement the Non-contiguous	CO4
57	Memory Allocation by using Paging.	CO4
58	Write a Program to simulate the FIFO page replacement algorithm.	CO5
59	Write a Program to simulate the LRU page replacement Algorithm.	CO1
60	Write a Program to simulate the Optimal page replacement Algorithm.	CO5
61	Write a program to simulate FCFS Disk Scheduling Algorithm	CO5
62	Program to simulate the SSTF Disk Scheduling Algorithm	CO5
63	Connects to VMware vCenter and lists all virtual machines along with their power state.	CO5
64	Creates a new virtual machine with specified configurations in Azure.	CO5
65	Demonstrate how to set up and deploy a simple distributed function using Azure Functions. The function should be able to handle HTTP requests and run in a distributed manner across Azure's infrastructure.	CO5

66	Write a shell script for the mount command, which is used to attach file systems to the file system hierarchy at a mount point.	CO5
67	Write a shell script for the umount command, which is used to detach a mounted file system.	CO5
68	Write a shell script for Automate backups using cron with the tar command.	CO5
	Variables and Control Structures:	
69	Write a shell script to determine the Area and Perimeter of a Rectangle.	CO5
70	Write a shell script to count the words, characters, and lines in the file.	CO5

Subject Name: Environmental Science	L-T-P [2-0-0]

Subject Code: BNC0402	Applicable in Department: All Branches

Pre-requisite of Subject: Environmental science is an interdisciplinary field that requires a solid foundation in various subjects to fully understand the complex interactions within the environment.
Building a strong foundation in subjects like physics, chemistry, biology, maths, geography,economics will equip students with the knowledge and skills necessary to tackle complex environmental challenges and contribute to sustainable solutions.

Course Objective: To help the students in realizing the inter-relationship between man and environment and help the students in acquiring basic knowledge about environment.

Course Outcomes (CO)

Course outcome: After completion of this course students will be able to:		Bloom's Knowledge Level(KL)
CO 1	Understand the basic principles of ecology and environment. Ecosystem: Basic concepts, components of ecosystem, food chains and food webs. Ecological pyramids	K1, K1
CO2	Understand the different types of natural recourses like food, forest, Minerals and energy and their conservation	K1, K2
CO3	Understand the importance of biodiversity, Threats of biodiversity and different methods of biodiversity conservation.	K1, K2
CO4	Understand the different types of pollution, pollutants, their sources, effects and their control methods.	K1, K2
CO5	Understand the basic concepts of sustainable development, Environmental Impact Assessment (EIA) and different acts related to environment	K1, K2

Syllabus

Unit No	Module Name	Topic covered	Pedagogy	Lecture Required (L+P)	Practical/ Assignment/ Lab Nos	CO Mapping
1		Definition, Scope and basic principles of ecology and environment. Ecosystem: Basic concepts,	Smart board, PPTS,	4 L	NA	CO1

	Basic Principle of Ecology	components of ecosystem. Food chains and food webs. Ecological pyramids, Energy flow in ecological systems, Characteristics of different ecosystems. Biogeochemical Cycles: Importance, gaseous and sedimentary cycles. Carbon, Nitrogen, Phosphorus and Sulphur Cycles. Basic concepts of sustainable development, SDGs, Ecosystem services, UN Decade for Eco restoration	Reference Books,				
2	Natural Resources and Associated Problems	Natural resources and associated problems. Forest resources: Use and over-exploitation, deforestation. Timber extraction, mining, dams and their effects on forest and tribal people. Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources. Food resources: World food problems, changes caused by agriculture and over-grazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity. Land resources: Land as a resource, land degradation, man induced landslides. Equitable use of resources for sustainable lifestyles. Non-Renewable Energy Resources: Fossil fuels and their reserves, Nuclear energy, types, uses and effects, Renewable Energy Resources: hydropower, Solar energy, geothermal, tidal and wind energy, Biomass energy, biogas and its advantages.	Smart board, PPTS, Reference Books,	4 L	NA	CO2	
3	Biodiversity Succession and Non-Renewable Energy Resources	Biodiversity and their importance, Threats to biodiversity, major causes, extinction's, vulnerability of species to extinction, IUCN threat categories, Red data book. Strategies for biodiversity conservation, principles of biodiversity conservation in-situ and ex-situ conservation strategies Mega diversity zones and Hot spots, concepts, distribution and importance. Succession: Concepts of succession, Types of Succession. Trends in succession. Climax	Smart board, PPTS, Reference Books	4 L	NA	CO3	

		and stability.				
4	Pollution and Solid Waste Management	Air pollution: sources of air pollution, Primary and secondary air pollutants. Origin and effects of SOX, NOX, Cox,CFC, Hydrocarbon, control of air pollution. Water pollution: sources and types of water pollution, Effects of water pollution, Eutrophication, Soil pollution: Causes of soil pollution, Effects of soil pollution, Major sources of and effects of noise pollution on health, Radioactive and thermal pollution sources and their effects on surrounding environment. Solid waste disposal and its effects on surrounding environment, Climate change, global warming, acid rain, ozone layer depletion.	Smart board, PPTS, Reference Books	4 L	NA	CO4
5	Role of Community and Environmental Protection Acts	Role of community, women and NGOs in environmental protection, Bio indicators and their role, Natural hazards, Chemical accidents and disasters risk management, Environmental Impact Assessment (EIA), Salient features of following Acts: a. Environmental Protection Act, 1986, Wildlife (Protection) Act, 1972.b. Water (Prevention and control of pollution) Act, 1974.c. Air (Prevention and control of pollution) Act, 1981. Forest (Conservation) Act, 1980.d. Wetlands (Conservation and Management) Rules, 2017; e. Chemical safety and Disaster Management law.F. District Environmental Action Plan. Climate action plans.	Smart board, PPTS, Reference Books	4 L	NA	CO5

Subject Name: Optimization and Numerical Techniques	**L-T-P [3-1-0]**

Subject Code: BAS0404	**Applicable in Department: DS/AI/AIML/CYS**

Pre-requisites of the Subject: Knowledge of Mathematics I and II of B. Tech or equivalent.

Course Objective: The objective of this course is to familiarize the engineers with concept of Linear Programming Problem (LPP), Integer Programming Problems, Constraint programming, various numerical techniques for mathematical task such as roots, integration, differential equations and numerical aptitude. It aims to show case the students with standard concepts and tools from B. Tech to deal with advanced level of mathematics and applications that would be essential for their disciplines.

Course Outcomes (CO)	

Course outcome: After completion of this course students will be able to:	**Bloom's Knowledge Level(KL)**
CO 1	Understand the concepts to formulate and to solve a Linear Programming Problem.	K1, K3
CO 2	Understand the concepts of Integer Programming Problem.	K1, K3
CO3	Understand the concepts of Non-Linear Programming Problem.	K1, K3
CO 4	Apply the concept of numerical techniques to evaluate the zeroes of the Equation, concept of interpolation and numerical methods for various mathematical operations and tasks, such as integration, the solution of linear system of equations and the solution of differential equation.	K3
CO 5	Solve the problems of Time & Work, Pipe & Cistern, Time, Speed & Distance, Boat &Stream, Analogy.	K3

Syllabus

Unit No	Module Name	Topic covered	Pedagogy	Lecture Required (L+P)	Practical/ Assignment/ Lab Nos	CO Mapping
1	Linear Programming	Introduction, Mathematical formulation of LP Models, Graphical Method, Description of simplex method, Big-M method, Two phase method, Alternative optimum solutions, unbounded solutions, Degeneracy, Duality in LPP.	Class room Teaching, Smart Board, PPT, M-tutor.	8 L	Assignment 1.1	CO1
2	Integer Programming	Introduction, Importance of Integer Programming Problems, Gomory's Cutting Plane method, Branch-and-Bound Method, Cargo Loading for Knapsack problem, Applications of Integer Programming.	Class room Teaching, Smart Board, PPT, M-tutor.	8 L	Assignment-2.1	CO2
3	Non-linear programming	Basic facts of maxima, minima & convex optimization, Convex sets and convex functions, Continuity and differentiable properties of convex functions, Constrained Optimization- Local and Global Solution Introduction, Elements of Constraint Programming, Lagrange multiplier method, Kuhn Tucker Condition.	Class room Teaching, Smart Board, PPT, M-tutor.	8 L	Assignment-3.1	CO3
4	Numerical Techniques	Error analysis, Zeroes of transcendental and polynomial equations using Bisection method, Regula-Falsi method and Newton-Raphson method, Interpolation: Lagrange's and Newton's divided difference formula. Solution of system of linear equations, Gauss Elimination method, Gauss- Seidel method. Numerical integration, Trapezoidal rule, Simpson's one third and three-eight rules.	Class room Teaching, Smart Board, PPT, M-tutor.	8 L	Assignment-4.1	CO4
5	Aptitude-IV	Time & Work, Pipe & Cistern, Time, Speed & Distance, Boat & Stream, Sitting Arrangement, Analogy.	Class room Teaching, Smart Board, PPT, M-tutor.	8 L	Assignment-5.1	CO5

Subject Name: Technical Communication	L-T-P [2-1-0]
Subject Code: BASL0401	**Applicable in Department: All Branches**

Pre-requisite of Subject: B2 (CEFR level) in the Core Skills test; B1/B2 in the Speaking and Writing tests

Course Objective: To develop communication and critical thinking skills necessary for succeeding in the diverse and ever-changing workplace of the twenty first century and help the students communicate effectively, creatively, accurately, and appropriately.

Course Outcomes (CO)

	Course outcome: After completion of this course students will be able to:	**Bloom's Knowledge Level(KL)**
CO1	Comprehend the principles and functions of technical communication.	K2
CO2	Write for a specific audience and purpose to fulfil the provided brief.	K5
CO3	Identify and produce different kinds of technical documents.	K2, K3
CO4	Apply effective speaking skills to efficiently carry out official discourses.	K3
CO5	Demonstrate understanding of communication through digital media.	K5

Syllabus

Unit No	Module Name	Topic covered	Pedagogy	Lecture Required (L+P)	Practical/ Assignment / Lab Nos	CO Mapping
1	Introduction to Technical Communication	• Definition, Process, Types, Levels, Flow and Barriers to Technical Communication with		6 L		CO1

		emphasis on cultural differences and gender sensitivity. Gender-neutral language. • Need for and Importance of Technical Communication - Significance of audience in technical communication • Tone- Formality and Informality	Interactive & Flipped classroom method		Assignment 1	

2	Technical Writing 1	• Technical writing and technical vocabulary
		• Business letters/emails
		  a) Types and format, Content Organization
		  b) Cultural Variety, Tone, and Intention
		  c) Bad news message, good news message
		  d) Advertisements, Editorial press releases
		• Notices, agenda, and minutes of meeting
		• Job application, CV, and Resume
			Interactive & Flipped classroom method	10 L	Assignment 2	CO2

3	Technical Writing 2	• Technical reports – types & formats • Structure of a report (short & long) • Ethical Writing – Copy Editing, Referencing and Plagiarism • Technical Proposal - structure and types • Technical/ Scientific paper writing	PPT, Activities	7 L	Assignment 3	CO3
4	Public Speaking	• Components of effective speak • Seminar and conference presentation • Conducting/ participating in meetings • Appearing for a job interview	Interactive sessions, activities, mock interviews	8 L	Assignment 4	CO4
5	Virtual/Remote Communication	• Understanding remote work – using different online platforms • Virtual etiquette- email ids, usernames • Developing online written correspondence- blogs, WhatsApp, LinkedIn. What not to write on social media. • Participating in online Conferences/seminars/meetings • Mobile Etiquette	Interactive sessions, activities	8 L	Assignment 5	CO5
Total				**39 Hours**

Subject Name: Data Structure and Algorithms-II	L-T-P [3-0-0]
Subject Code: BCSE0401	**Applicable in Department: CSE/IT/CS/AI/AIML/IOT/DS/CYS**

Pre-requisite of Subject: C, Python

Course Objective: The objective of the course is to learn the basic concepts of algorithm analysis, along with the implementation of non-linear data structures.

Course Outcomes (CO)

Course outcome: After completion of this course students will be able to:		Bloom's Knowledge Level(KL)
CO1	Apply tree structures effectively demonstrating proficiency in tree operations and algorithms.	K3
CO2	Analyse the graph data structure and implement various operations for problem solving.	K4
CO3	Implementation and analysis of dynamic programming for efficient problem-solving across diverse contexts.	K4
CO4	Apply efficient backtracking and branch &bound techniques across diverse problem-solving scenarios.	K3
CO5	Understand advanced data structures, their implementation and application for efficient data manipulation and retrieval.	K2

Syllabus

Unit No	Module	Topics Covered	Pedagogy	Lecture Required T=L+P	Practical/Assignment/Lab	CO Mapping
1 Design and Analysis	Module 1.1: Trees	Trees: Terminology used with Trees, Binary Tree, Memory representation of Tree, Traversal Algorithms: In-order, Pre-order, and post-order. Constructing Binary	Lectures, Code Walkthroughs, hands-on programming, Problem	8L+10P	.	CO1

of Algorithms: Trees		Tree from given Tree Traversal, Operation of Insertion, Deletion, Searching & Modification of data in Binary Search tree, Binary Heaps, Threaded Binary trees, Traversing Threaded Binary trees, AVL Tree.	Solving, Collaborative Learning, competitive coding Projects, and Assessments.			
	Module 1.2: Application of Trees	Priority Queue, Heap Sort, Huffman codes.				
2 Design and Analysis of Algorithms: Graphs	Module 2.1: Graphs	Terminology used with Graph, Data Structure for Graph Representations: Adjacency matrices, Adjacency List. Graph Traversal: Depth First Search and Breadth First Search. Connected Component, Spanning Trees,	Lectures, Code Walkthroughs, hands-on programming, Problem Solving, Collaborative Learning, competitive coding, Projects, and Assessments.	8L+10P	Depth First Search and Breadth First Search. Connected Component, Spanning Trees, Minimum Cost Spanning Trees: Prim's and Kruskal's algorithm. Directed-Acyclic Graph, Transitive Closure, and Shortest Path algorithms: Dijkstra	CO2
	Module 2.2: Algorithms on Graphs	Minimum Cost Spanning Trees: Prim's and Kruskal's algorithm. Directed- Acyclic Graph, Transitive Closure and Shortest Path algorithms: Dijkstra Algorithm, Bellman Ford Algorithm, Floyd Warshall's Algorithm.				
3 Dynamic Programming	Module 3.1: Dynamic Programming	Dynamic Programming concepts 0/1 Knapsack, Longest Common Sub Sequence, Matrix Chain Multiplication, Resource Allocation Problem.	Lectures, Code Walkthroughs, hands-on programming, Problem Solving,	8L+8P		CO3

			Collaborative Learning, competitive coding, Projects, and Assessments.			
4 Backtracking, Branch and Bound	Module 4.1: Backtracking	Backtracking, Branch, and Bound with Examples Such as Travelling Salesman Problem, Graph Colouring, n-Queen Problem, Hamiltonian Cycles, and Sum of Subsets.	Lectures, Code Walkthroughs, hands-on programming, Problem Solving, Collaborative Learning, Projects, Assessments.	8L+10P		CO4
5 Advanced-Data Structures	Module 5.1: Advanced-Data Structures	Red-Black Trees, B – Trees, B+ Trees, Binomial Heaps, Fibonacci Heaps, Tries.	Lectures, Code Walkthroughs, hands-on programming, Problem Solving, Collaborative Learning, Projects, Assessments.	8L+10P		CO5

Subject Name: Computer Networks and Network Programming	L-T-P [3-0-0]
Subject Code: BCSCY0401	**Applicable in Department: CYS**

Pre-requisite of Subject: The student should have a basic knowledge of data communication and programming.

Course Objective: The objective of the course is to present an introduction of TCP/IP protocol, packet switching and message switching, sliding window protocol, CDMA, network layer protocols (IPv4, ARP, RARP), routing, TCP and UDP, congestion control, quality of service, and network applications such as DNS, FTP, TELNET, and remote logging.

Course Outcomes (CO)

Course outcome: After completion of this course students will be able to:		Bloom's Knowledge Level(KL)
CO1	Build an understanding of the Layered Architecture of computer networking and the physical layer.	K2
CO2	Understand the properties of link and network layer and also analyzed the solutions for error control, flow control, and addressing, for networks.	K4
CO3	Understand the duties of the transport layer and the addressing and functions of sockets.	K2
CO4	Implement and analysed the network connections using programming skills.	K4
CO5	Understand and analysed the different protocols used at application layer.	K4

Syllabus

Unit No	Module Name	Topic covered	Pedagogy	Lecture Required (L+P)	Practical/ Assignment	CO Mapping
1	Introduction to Networking	Goals and applications of networks, Categories of networks, Organization of the Internet, ISP, The	Lectures, PPTs,	5L + 4P	Assignment 1	K2

		OSI reference model, TCP/IP protocol suite, Network devices and components, Mode of communications, Physical Layer: Network topology design, Types of connections, LAN, MAN and WAN, Transmission media, Signal transmission and encoding, Network performance and transmission impairments, multiplexing, IEEE standards.	Notes and Practical Sessions			
2	Data Link and Network Layer	Framing, Error Detection and Correction, Flow control (Elementary Data Link Protocols, Sliding Window protocols). Medium Access Control and Local Area Networks: Channel allocation, Multiple access protocols, LAN standards, Link layer switches & bridges. Network Layer: Point-to-point networks, Logical addressing, Basic internetworking (IP, CIDR, ARP, RARP, DHCP, ICMP), IPv4, IPv6, Routing, forwarding and delivery, Static and dynamic routing, Routing algorithms and protocols, Congestion control algorithms.	Lectures, PPTs, Notes and Practical Sessions	6L + 2P	Assignment 2	K4
3	Transport Layer	Process-to-process delivery, Transport layer protocols (UDP and TCP), Connection management, Flow control and retransmission, Window management, TCP Congestion control, and Quality of service. Introduction to Sockets: Introduction to sockets, network programming and its applications, client-server model, socket address structures, UDP sockets, and TCP connection establishment.	Lectures, PPTs, Notes and Practical Sessions	6L + 4P	Assignment 3	K2
4	Network Connection	Network Programming Libraries and Frameworks, Byte ordering and Byte manipulation functions, socket presentation function, socket options, and configuration. Establish connections and send and receive data.	Lectures, PPTs, Notes and Practical Sessions	6L + 4P	Assignment 4	K4
5	Application Layer	Domain Name System, World Wide Web and Hyper Text Transfer Protocol, Electronic mail, File Transfer Protocol, Remote login, Network Management, Data compression, VPN, Firewalls.	Lectures, PPTs, Notes and Practical Sessions	5L + 3P	Assignment 5	K4

Subject Name: Cyber Security Essentials		L-T-P [2-0-0]
Subject Code: BCSCY0402		**Applicable in Department: CYS**
Pre-requisite of Subject: Basic understanding of networking, operating systems and programming		
Course Objective: To provide a comprehensive understanding of key cybersecurity concepts and tools by covering the identification and response to various cyber-attacks, the design and deployment of VPN networks using OpenVPN, and analysis of network traffic with Wireshark.		
Course Outcomes (CO)		
Course outcome: After completion of this course students will be able to:		**Bloom's Knowledge Level(KL)**
CO1	Apply basic defensive strategies by acquiring foundational understanding of cybersecurity principles and cyber-attacks on different devices	K2
CO2	Configure secure remote access solutions using OpenVPN, ensuring confidentiality, integrity, and authenticity of network communication.	K3
CO3	Apply techniques for capturing, analyzing, and interpreting network traffic using Wireshark, enabling them to id security vulnerabilities, troubleshoot network issues, and detect malicious activities.	K4
CO4	Develop proficiency in Kali Linux tools for vulnerability assessment along with security at different levels of OSI model	K3
CO5	Apply various password-cracking techniques, understand password security, and acquire the skills to assess password vulnerabilities and implement more robust security measures	K3
Syllabus

1	Cyber Security attacks	Cybersecurity & its key principles, cybersecurity threats landscapes, Attacks on different Devices, Attacks on Personal Computers and Laptops, Network attacks, IOT attacks ,Industry Controlled Systems attacks, Server & cloud attacks, POS attacks, Smart Vehicles attacks	Lecture, Labs	6L +6P	1 to 8	CO1
2	Virtual Private Networks and OpenVPN Configuration	-Introduction to Virtual Private Networks (VPNs) -VPN protocols and encryption algorithms -OpenVPN installation and configuration -Secure communication using OpenVPN	-Lecture sessions -Hands-on lab sessions	4L + 10P	9 to 13	CO2
3	Network Security with Wireshark	Incident Response and Forensic Analysis with Wireshark, Protocol Analysis, Wireshark Scripting and Automation, Secure Communication Analysis, IoT Security Analysis, Wireless Network Security Analysis	-Lecture sessions -Hands-on lab sessions	4L + 14P	14 to 18	CO3
4	Introduction to OSI Model security and Kali Linux	Physical security measures for hardware, Protection against tampering and unauthorized access **Data Link layer**: MAC address filtering. VLANs for traffic. segmentation. **Network Layer -** Access control lists (ACLs) and firewalls. Virtual Private Networks (VPNs).Secure routing protocols. **Transport Layer (Layer 4)**: SSL/TLS encryption. Firewalls and traffic policies. **Session & Presentation Layer :** Authentication and authorization. Session encryption. Data compression and encryption	- Lecture sessions - Hands-on lab sessions	2L + 10P	19 to 23	CO4

		Application Layer:- Web application security -Overview of Kali Linux and its features -Kali Linux installation and setup -Basic commands and tools in Kali Linux				
5	Password Security and Cracking Techniques	-Password security principles and best practices -Password cracking techniques and methods -Introduction to John the Ripper password-cracking tool -Brute-force and dictionary attacks with John the Ripper	-Lecture sessions -Hands-on lab sessions	4L + 10P	24 to 28	CO5
Total				**70 Hours**

Subject Name: Database Management Systems	L-T-P [0-0-6]

Subject Code: BCSE0452	Applicable in Department: CSE/IT/CS/AI/AIML/ IOT/DS/CYS

Pre-requisite of Subject: - It is recommended to have fundamental computer knowledge that includes concepts of computer architecture, storage and hardware. Knowledge of data structures and algorithms and programming will be an added benefit.

Course Objective: - The objective of the course is to introduce about database management systems, with an emphasis on how to organize, maintain and retrieve - efficiently, and effectively - information in relational & non-relational databases.

Course Outcomes (CO)	

Course outcome: After completion of this course students will be able to:	**Bloom's Knowledge Level(KL)**
CO 1	Understand and Apply ER model for conceptual design of the database.	K3
CO2	Execute SQL and apply the normalization to improve the database design.	K3
CO3	Implement and justify the complex queries in database with different applications.	K5
CO4	Understand and execute the concept of PL/SQL, transaction and concurrency control.	K3
CO5	Evaluate and implement Relational and Non-Relational database on different tools for real-world applications.	K5

Syllabus						
Unit No	**Module Name**	**Topic covered**	**Pedagogy**	**Lecture Required (L+P)**	**Practical/ Assignment/ Lab Nos**	**CO Mapping**

1	Module 1.1: Introduction about the DBMS	Basic Concept: - Introduction of SDLC, Data, Information, Database, DBMS, History of Database, Database system Vs File system, Data models & Types of Data Models Relational Database term: - Relation, Tuple, Attribute and Domain, Codd Rules	Chalk & Duster/ Lectures, PPTs, Notes and Smart Interactive Panel	8L+8P	Experiment/ Program 1.1 to 1.8	CO1
Introduction of Database & Conceptual Designing	Module1.2: Design & Implement the ER Diagram	Data Modelling using the Entity Relationship Model: ER model concepts, Degree of relationship, Notation for ER diagram, mapping constraints reduction of an ER diagrams to tables. Extended Entity Relationship Diagram & reduction of EER				
	Module 1.3: Introduction on SQL, Implement the DDL, DML, DCL & TCL	Introduction on SQL & Types of SQL commands: -DDL, DML, DCL, TCL				
	Module 1.4: Introduction on Relational Algebra	Basic of Relation Algebra & Operations, Query Optimization				
2 Basic of SQL &	Module2.1: Implementation the Keys	Keys & Types of Keys: - Super key, Candidate Key, Primary Key, Alternative Key Composite Primary key, Foreign Key, unique and Composite Unique key	Chalk & Duster/ Lectures, PPTs, Notes and Smart Interactive	7L+10P	Experiment/ Program 2.1 to 2.11	CO2

Normalization	Module 2.2: Implementation of Data Constraint	Data Constraint: -Null, Not Null, Default and check Constraint	Panel			
	Module 2.3: Implementation of Aggregate function & clause	Use of Aggregate Function Uses of String Functions in SQL Uses of mathematical functions in SQL Uses of Advanced Functions in SQL Use of Clause: Where, Group by, Having and Order by				
	Module 2.4: Understand & implement the normalization and different types of functions in SQL.	Functional Dependencies, Normalization & Types of Normalization, Candidate Key, Minimal Cover of FD's				
3 Introduction of Complex Queries	Module3.1: Operator & Predicates	Operator & Predicates: - Like, Between, Aliases, distinct, limit, Implementation of Logical operator: - And, Or, Not	Chalk & Duster/ Lectures, PPTs, Notes and Smart Interactive Panel	7L+10P	Experiment/ Program 3.1 to 3.9	CO3
	Module3.2: Set Theory Operator	Set Theory Operator: - Union, Intersect, Minus.				

	Module3.3: Binary Operator	Binary Operator: - Cartesian Product, Join:-Inner Join: - Natural Join, Equi Join & Non Equi Join Outer Join:- Left Outer Join, Right Outer Join and Full Outer Join, Division Operator				
	Module 3.4: Nested Query	Nested Query or Sub Query: -IN, NOT IN, Exists, Not Exists, All and Any				
	Module 3.5: Understand& Implementati on the database connectivity	Database connectivity with Java/Python and other Programming Languages				
4 Introduction of PL/SQL and Transaction & Concurrency control concept	Module 4.1: Implementati on index, Views and Array	Managing Indexes, Synonyms and Sequences, Managing Views, Managing Data in Different Time Zones, Array Function & Operators,	Chalk & Duster/ Lectures, PPTs, Notes and Smart Interactive Panel	6L+8P	Experiment/ Program 4.1 to 4.10	CO4
	Module 4.2: Implementati on of PL/SQL	Introduction of PL/SQL Implementation of PL/SQL Function, Procedure, Trigger, Cursor				
	Module 4.3: Implementati on of Transition management & concurrency control	Transaction system: - Life cycle of transaction, ACID Properties Schedule & Types of Schedule, Recoverability Concurrency Control Techniques: Concurrency Control, Locking Techniques for concurrency control, 2-phase Locking protocol Transaction & Data Control: -Grant, Revoke, commit & Rollback				

5	Module 5.1: Understand NoSQL Concept and implement the CURD operations	Introduction of NoSQL Data Models, Overview of NoSQL Databases With their Types, Uses & Features of NoSQL Document Databases, CAP theorem, BASE Vs ACID Comparison of relational databases to NoSQL stores, uses and deployment; - MongoDB, Cassandra, HBASE, Neo4j and Riak	Chalk & Duster/ Lectures, PPTs, Notes and Smart Interactive Panel	8L+12P	Experiment/ Program 5.1 to 5.10	CO5
Introduction of NoSQL With MongoDB	Module 5.2: Implement the MongoDB Cursor, relation and Aggregation in MongoDB.	Introduction and Features of MongoDB, MongoDB Operators, MongoDB Collection & Document, CRUD operations, MongoDB Shell & their commands,				
	Module 5.3: Understand the concept of cloud database.	Introduction of Cloud Database. MongoDB Cloud product : Stitch, Atlas & Cloud Manager.				
Total				**(36L+48P) = 80 Hours**

Unit 5	

List of Practicals		
Lab No.	**Program Logic Building**	**CO Mapping**
1	Understand and implement the different ER diagram notation with their relationship and Cardinalities.	
2	Creating ER Diagram for company Database. Company database have entities like employee, departments, projects and dependents also implement the relationship and cardinalities between the entities with their relevant attribute.	CO1
3	Design an ER diagram for a travel agency that includes entities such as travellers, bookings, destinations, and itineraries. also implement the relationship and cardinalities between the entities with their relevant attribute.	CO1
4	Converting Company & Travel Agency ER Model to Relational Model (Represent entities and relationships in tabular form, represent attributes as columns, identifying keys).	CO1
5	Each students create at least one ER & EER diagram from real world problem and convert in tabular from with all needed constraint.	CO1
6	Implement DDL and DML commands	CO1
7	Implement DCL & TCL commands	CO1

8	i. Create Database, Rename Database, Delete Database in relational database tool.
	ii. Create table employee with attributes
	   Emp_no<datatype><size>
	   E_name<datatype><size>
	   JOB <datatype><size>
	   Address <datatype><size>
	   Salary<datatype><Size>
	iii. Insert data into the table
	iv. Implementation of select command
	v. Implementation of update command
	vi. Implementation of alter command
	vii. Implementation of delete command
	viii. Implementation of rename command.
		CO1

	ix. Implementation of rollback command x. Implementation of commit Command xi. Implementation of Truncate Command xii. Implementation of Drop Command	
9	Implementation of I/O Constraint: Primary Key, composite primary key, Foreign Key with on delete set null and on delete set null constraint	CO2
10	Implementation of constraint: Unique Key and Composite unique key and uses Unique key as foreign key.	CO2
11	Implementation of Business Constraint: Null, Not Null, Default, Check.	CO2
12	Implement and apply the different form of normalization approach on company /Travel Agency Database .	CO3

13	Reduction & Implementation in SQL for ER Diagram of Company Database: -
	    i. Create table for EMPLOYEE, DEPARTMET, PROJECT, DEPENDENTS and WORK_ON with all needed keys and other constraints.
	    ii. Populated all table with atleast Ten records in each table as per as applied constraints.
		CO2

14	Practicing Queries using Like, Between, Aliases, distinct Operator & Predicate.	CO2
15	Implementation of Aggregate Functions.	CO2
16	Implementation of Scalar, Mathematical and Advanced functions.	CO2
17	Implementation of Queries using Where, Group by, Having and Order by Clause.	CO2

18	Implementation and uses of clause and operators on Company/ Travel Agency or other database.
	    i. Find the name of employee whose name start with A.
	    ii. Find the name of employee where 'hi' in any position.
	    iii. Find the name of employee whose 'r' have in second position.
	    iv. Find the details of employee whose salary is less than 70000.
	    v. Find the name of employee whose name start with V and end with l.
	    vi. Find the average salary of each department
	    vii. Find the max salary of each department
	    viii. Find the sum of salary of department that have more than three employees in ascending order.
	    ix. Find the empid of Employee who work in more than 3 project.
	    x. Find the empid who have more than one dependent.
	    xi. K. Implement the concept of rollback and commit on Employee Table
		CO2

19	Create a table EMPLOYEE with following schema:-(Emp_no, E_name, E_address, E_ph_no, Dept_no, Dept_name,Job_id, Designation, Salary)
	Write SQL statements for the following query.
	    i. List the E_no, E name, Salary of all employees working for MANAGER.
	    ii. Display all the details of the employee whose salary is more than the Sal of any IT PROFF.
	    iii. List the employees in the ascending order of Designations of those joined after 1981.	

	iv. List the employees along with their Experience and Daily Salary. v. List the employees who are either 'CLERK' or 'ANALYST' . vi. List the employees who joined on 1-MAY-81, 3-DEC-81, 17-DEC-81,19-JAN-80 . vii. List the employees who are working for the Deptno 10 or 20. viii. List the E-names those are starting with 'S' . ix. Display the name as well as the first five characters of name(s) starting with 'H' x. List all the emps except 'PRESIDENT' & 'MGR" in asc order of Salaries. xi. Display total salary spent for each job category. xii. Display lowest paid employee details under each manager. xiii. Display number of employees working in each department and their department name. xiv. Display the details of employees sorting the salary in increasing order. xv. Show the record of employee earning salary greater than 16000 in each department. xvi. Add constraints to check, while entering the empno value (i.e) empno > 100. xvii. Define the field DEPTNO as unique. xviii. Create a primary key constraint for the column (EMPNO).	
20	Implementation of Queries using set theory operators UNION, INTERSECT, MINUS.	CO3
21	Implementation of Queries using Inner Join:- Natural Join , Equi Join & Non Equi Join	CO3
22	Implementation of Queries using Outer Join :- Left Outer Join, Right Outer Join and Full Outer Join	CO3
23	Implementation of Queries nested Queries or Sub Queries: - IN, NOT IN, Exists, Not Exists, All and Any.	CO3
24	Apply the set theory operators, join's and nested queries on company database (Case Study-1) Write the SQL Queries for the following statement i. Retrieve the names of employees in department 5 who work more than 10 hours per week on the 'ProductX'project. ii. List the names of employees who have a dependent with the same first name as themselves. iii. Find the names of employees that are directly supervised by 'Franklin Wong'. iv. For each project, list the project name and the total hours per week (by all employees) spent on that project. v. Retrieve the names of all employees who work on every project controlled by department 5. vi. Retrieve the names of all employees who do not work on any project. (f') Retrieve the names of all employees who do not work on every project vii. For each department, retrieve the department name, and the average salary of employees working in that department. viii. Retrieve the average salary of all female employees. ix. Find the names and addresses of all employees who work on at least one project located in Houston but whose department has no location in Houston.	CO3

	x. List the last names of department managers who have no dependents. xi. Retrieve the names of all employees who work in the department that has the employee with the highest xii. salary among all employees. xiii. Retrieve the names of all employees whose supervisor's supervisor has '888665555' for Ssn. xiv. For each department that has more than 5 employees retrieve the dno and no. of its employees who are making more than 6,00,000 xv. Find the sum of salaries of all employees of 'ACCOUNTS' department as well as the MAX(SAL), MIN(SAL),AVG(SAL) in this department xvi. Show the resulting salary for employee working on IOT project is given a 10% raise	
25	**Requirement:** A college consists of number of employees working in different departments. In this context, create two tables' employee and department. Employee consists of columns empno, empname, basic, hra, da, deductions, gross, net, date-of-birth. The calculation of hra, da are as per the rules of the college. Initially only empno, empname, basic have valid values. Other values are to be computed and updated later. Department containsdeptno, deptname, and description columns. Deptno is the primary key in department table and referential integrity constraint exists between employee and department tables. Perform the following operations on the database: i. Create tables department and employee with required constraints. ii. Initially only the few columns (essential) are to be added. Add the remaining columns separately by using appropriate SQL command 3. Basic column should not be null. iii. The default value for date-of-birth is 1 Jan, 1990. iv. When the employees called daily-wagers are to be added the constraint that salary should be greater than or equal to 5000 should be dropped. v. Display the information of the employees and departments with description of the fields. vi. Display the average salary of all the departments. vii. Display the average salary department wise. 9. Display the maximum salary of each department and also all departments put together. viii. Commit the changes whenever required and rollback if necessary. ix. Find the employees whose salary is between 5000 and 10000 but not exactly 7500. x. Find the employees whose name contains 'en'. xi. 12.Create alias for columns and use them in queries. xii. 13. List the employees according to ascending order of salary. xiii. 14. List the employees according to ascending order of salary in each department. xiv. Find the employees who are born on Feb 29. xv. Find the departments where the salary of at-least one employee is more than 20000. xvi. Find the departments where the salary of all the employees is less than 20000.	CO3

	xvii.	Add the column dept_location in department table.	
		Understand & implement the Database Connectivity with Java/Python etc. programming language	CO3
26		Implementation and apply all the set theory operators, join and nested queries concept on Case study –1.	CO3
	i.	Make a list of all project members for projects that involve an employee whose name is SCOTT either as a worker or as a manager of the department that controls the project.	
	ii.	To retrieve the Social Security numbers of all employees who either work in department 5 or directly supervise an employee who works in department 5.	
	iii.	To retrieve the SSN of all employee who work as a supervisor not a manager.	
	iv.	D To retrieve the SSN of all employee who work as a supervisor and also manage the department.	
	v.	We want to retrieve a list of names of each female employee's dependents	
	vi.	We want a list of all employee names as well as the name of the departments they manage if they happen to manage a department; if they do not manage one, we can indicate it with a NULL value.	
	vii.	Retrieve the names of employees who have no dependents.	
	viii.	List the names of all employees with two or more dependents.	
	ix.	List the names of managers who have at least one dependent.	
	x.	Retrieve the names of all employees who do not have supervisors.	
	xi.	Retrieve the name of each employee who has a dependent with the same first name and is the same sex as the employee.	
27		Create Desktop/Web application using the database connectivity.	CO3
28		Implementation of Array Function	CO4
29		Implementation of Array Operators	CO4
30		Implementation of Indexing, Views and sequence	CO4
31	i.	Write a PL/SQL Program t3o Add Two Numbers	CO4
	ii.	Write PL/SQL Program for Fibonacci Series	
	iii.	Write PL/SQL Program to Find Greatest of Three Numbers	
32		Write a Pl/SQL code block to calculate the area of a circle for a value of radius varying from 3 to 7. Store the radius and the corresponding values of calculated area in an empty table named Areas, consisting of two columns Radius and Area.	CO4
33		Write a PL/SQL code block that will accept an account number from the user, check if the users balance is less than the minimum balance, only then deduct Rs.100/- from the balance.	CO4
34		Create a row level trigger for the customers table that would fire for INSERT or UPDATE or DELETE operations performed on the CUSTOMERS table. This trigger will display the salary difference between the old values and new values:	CO4

35	Implementation of commit and rollback statement with amount transfer example.	CO4
36	Implementation array, indexing, transaction concept on Case study 1. i. Implementation of Array Functions & Operators ii. Implementation of Sequence -Creating Sequences -Modifying a Sequence Definition -Removing Sequences iii. Implementation of Views -Creating Simple and Complex Views -Modifying Views -Removing Views iv. Implementation of Indexes -Manual and Automatic Indexes -Creating Indexes - Removing Indexes	CO4
37	i. Write a PL/SQL block to calculate the incentive of an employee whose ID is 110. ii. Grant and revoke DCL command used on Employee table -GRANT SELECT ON Employee TO emp_name; -Granting multiple privileges on Employee table -Granting all privileges on Employee table; -Granting privilege to a role in Employee table -Granting the WITH GRANT OPTION on Employee table. -Revoke all the permission applied on Employee table. iii. Create the CUSTOMERS table having the following attributes: - (ID, NAME, AGE, ADDRESS, SALARY) - Insert ten records in customer table. -In Customer table delete those records which have age = 25 and then COMMIT the changes in the database. -In Customer table delete those records which have age = 30 and then Rollback the changes in the database. - Create three savepoint for customer table in that the three deletions have taken place. - Apply the savepoint 2 with rollback on customer table and display the table record. - Apply the SET Transaction command.	CO5
38	Study of Open Source NOSQL Database and installation of MongoDB	CO5
39	Create, drop, rename the database in MongoDB	CO5
40	Implementation the MongoDB Operators.	CO5
41	Implementation the CRUD Operation in MongoDB	CO5
42	Implementation of the MongoDB Shell commands	CO5
43	Implementation of MongoDB Cursor and their methods	CO5

44	Implementation of relation in MongoDB	CO5
45	Implementation of Aggregate in MongoDB	CO5
46	Deployment the data on different tools like HBASE, Riak and Cassandra	CO5
47	Implementation of all CRUD operation, Cursor and aggregate etc. on real world problem. Connect to MongoDB (by using mongo shell) i. Create database with name (ems) - use ems; ii. Create collection with following fields: {"name", age", gender","exp, subjects, "type"" qualification"}, iii. Insert the Ten documents into "faculty" collection (Use insertMany()) Write the following queries: i. Get the details of all the faculty. ii. Get the count of all faculty members. iii. Get all the faculty members whose qualification is "Ph.D". iv. Get all the faculty members whose experience is between 8 to 12 years. v. Get all the faculty members who teach "MATHS" or "NETWORKING". vi. Get all the faculty members who teach "MATHS" and whose age is more than 30 years and qualification must be "Ph.D". vii. Get all the faculty members who are working part-time or who teach "JAVA". viii. Add the following new faculty members: {"name":"Ankita ", "age":34,"gender":"F","exp":25, subjects: ["MATHS","DE"],"type":"Full Time", "qualification":"Ph.D"} ix. Update the data of all faculty members by incrementing their age and exp by one year. x. Update the faculty "Sivani" with the following data: update qualification to "Ph.D" and type to "Full Time". xi. Update all faculty members who are teaching "DBMS" such that they should now also teach "Java Programming". xii. Delete all faculty members whose age is more than 55 years. xiii. Get only the name and qualification of all faculty members. xiv. Get the name, qualification and exp of all faculty members and display the same in ascending order of exp. xv. Sort the faculty details by their age (descending order) and get the details of the first five faculty members only.	CO5
48	Implementation of case Study on different domain 1. E-commerce Platform 2. Inventory Management 3. Railway System	CO1, CO2, CO3, CO4, CO5

| | | 4. Hospital Data Management
5. Voice-based Transport Enquiry System
6. SMS-based Remote Server Monitor system
7. Banking System
8. AI based | |

Subject Name: Data Structure and Algorithms -II Lab	**L-T-P [0-0-4]**
Subject Code: BCSE0451	**Applicable in Department: CSE/IT/CS/AI/AIML/IOT/DS/CYS**

Pre-requisite of Subject: C, Python

Lab Experiments

Course Objective: Learn to implement non-linear data structures.

Course Outcomes (CO)

Course Outcome: After completion of this course students will be able to:	**Bloom's Knowledge Level(KL)**
CO1	Implementation of tree data structures for basic operations like insertion, deletion, searching and traversal	K3
CO2	Implementation of algorithms based on graph data structures for solving real world problems.	K3
CO3	Implementing Dynamic Programming, Backtracking, Branch and Bound algorithms to solve complex data efficiently and effectively.	K3

List of Practical's		
Sr. No.	**Program Title**	**CO Mapping**
1	Write a program to implement an in-order traversal of a binary tree and print the nodes.	CO1
2	Write a program to implement a pre-order traversal of a binary tree and print the nodes.	CO1

3	Write a program to implement a post-order traversal of a binary tree and print the nodes.	CO1
4	Write a program to count number of nodes in a binary tree	CO1
5	Write a program to find the height of the tree	CO1
6	Write a program to check if the Binary tree is balanced or not.	CO1
7	Write a Program to search a number in Binary Search Tree (BST)	CO1
8	Write a program to insert a node in a Binary Search Tree (BST).	CO1
9	Write a program to delete a node from a Binary Search Tree (BST).	CO1
10	Write a program to implement a max-heap and perform heap sort on an array of integers.	CO1
11	Write a Program to implement human coding algorithm	CO1
12	Write a program to implement priority queue using max heap.	CO1
13	Write a program to create a graph using an adjacency matrix.	CO2
14	Write a program to create a graph using an adjacency list.	CO2
15	Write a program to perform Depth-First Search (DFS) on a graph.	CO2
16	Write a program to perform Breadth-First Search (BFS) on a graph.	CO2
17	Write a program to check if there is a path between two nodes in a graph using DFS.	CO2
18	Write a program to find all the vertices reachable from a given vertex in a graph using BFS.	CO2
19	Write a program to detect a cycle in an undirected graph using DFS.	CO2
20	Write a program to detect a cycle in a directed graph using DFS.	CO2
21	Write a program to find the degree of each vertex in an undirected graph.	CO2
22	Write a program to count the number of connected components in an undirected graph.	CO2
23	Write a program to implement Dijkstra Algorithm.	CO2
24	Write a program to implement Prims Algorithm.	CO2
25	Write a program to implement Kruskal Algorithm.	CO2
26	Write a program to implement Floyd Warshall's all pair shortest path algorithm.	CO3

27	Write a program to implement Bellman ford Algorithm.	CO3
28	Write a program to implement Longest common subsequence (LCS).	CO3
29	Write a program to implement sum of subset problem using backtracking.	CO3
30	Write a program to implement insertion and search operations in a Tree.	CO3

Subject Name: Cyber Security Essentials Lab	**L-T-P [0-0-4]**
Subject Code: BCSCY0452	**Applicable in Department: CYS**

Pre-requisite of Subject: Basic understanding of networking, operating systems and programming

Lab Experiments

Course Objective: To provide students with hands-on experience and skills in various aspects of cybersecurity using the mentioned tools. The practical's aim to equip students with the knowledge and skills necessary to address cybersecurity challenges and contribute effectively to the industry.

Course Outcomes (CO)

Course outcome: After completion of this course students will be able to:		**Bloom's Knowledge Level(KL)**
CO 1	Apply their proficiency in vulnerability recognition to identify and defend against cybersecurity attacks, while applying expertise in configuring secure Virtual Private Networks (VPNs) using OpenVPN.	K3
CO2	Apply practical skills in network traffic analysis and penetration testing techniques through hands-on experience with Wireshark and Kali Linux, enabling them to analyze network traffic and perform security assessments	K4
CO3	Apply password cracking techniques using various tools, enabling them to analyze password vulnerabilities and strengthen security measures	K4
List of Practical's		
Sr No	**Program Title**	**CO**

		Mapping
1	Analyze the behavior of different malware types using tools like Wireshark, Process Monitor, and a sandbox environment.	CO1
2	Detect and remove the keylogger using anti-malware tools and system logs.	CO1
3	Create a simple vulnerable app. Task: Perform static and dynamic analysis on the app to identify security flaws.	CO1
4	Setup a router with default credentials and insecure configurations. Task: Exploit the default settings to gain unauthorized access, then secure the router.	CO1
5	Provide firmware images from IoT devices. Task: Use tools like Binwalk and Firmware Analysis Toolkit to identify vulnerabilities.	CO1
6	Provide a web applied Task: Perform an SQL injection attack and extract data, then apply fixes to prevent the vulnerability.	CO1
7	Provide a PoS system with simulated malware. Task: Analyze the malware's behavior and impact, then clean and secure the system.	CO1
8	Identify and exploit the misconfigurations, then secure the cloud environment.	CO1
9	To set up a basic OpenVPN server and client.	CO1
10	To configure OpenVPN with user authentication using a username and password.	CO1
11	To configure OpenVPN to use TLS for additional security.	CO1
12	To configure an OpenVPN server to handle multiple client connections.	CO1
13	To configure and monitor OpenVPN logs for security and troubleshooting.	CO1
14	Basic Packet Capture and Analysis using Wireshark	CO2
15	To understand the differences between HTTP and HTTPS traffic by capturing and analyzing them.	CO2
16	To identify common network attacks such as ARP spoofing, DoS attacks, or port scanning using Wireshark.	CO2
17	To capture and analyze DNS queries and responses.	CO2

18	To capture and analyze FTP traffic, highlighting the vulnerabilities of unencrypted FTP.	CO2
19	Write kali linux command to implement file management, file navigation and password cracking.	CO2
20	Write kali linux commands to perform network scanning and network configuration	CO2
21	Write kali linux commands to identify vulnerable access points in a network, file integrity and analysis	CO2
22	Write kali linux command to automate vulnerability scanning of a website, shell scripting, process management	CO2
23	Write kali linux command to exploit a known vulnerability in a target system, service management, search files, permission management	CO2
24	Develop a program to crack password hashes using various techniques supported by John the Ripper.	CO3
25	Create a program to generate custom wordlists for password cracking.	CO3
26	Design a program to perform a brute-force attack on a given password-protected file.	CO 3
27	Build a program to assess the strength of user passwords based on a given policy.	CO 3
28	Develop a program to create and apply custom rules for password cracking using John the Ripper.	CO 3

Subject Name: Technical Communication Lab	L-T-P [0-0-2]
Subject Code: BASL0451	**Applicable in Department: All Branches**

Prerequisite of Subject: B2 (CEFR level) in the Core Skills test; B1/B2 in the Speaking and Writing tests

Lab Experiments

Course Objective: To develop communication and critical thinking skills necessary for succeeding in the diverse and ever-changing workplace of the twenty first century and help the students communicate effectively, creatively, accurately, and appropriately.

Course Outcomes (CO)

Course outcome: After completion of this course students will be able to:		Bloom's Knowledge Level(KL)
CO 1	Comprehend the principles and functions of technical communication.	K2
CO2	Write for a specific audience and purpose to fulfil the provided brief.	K5
CO3	Identify and produce different kinds of technical documents.	K2, K3
CO4	Apply effective speaking skills to efficiently carry out official discourses.	K3
CO5	Demonstrate understanding of communication through digital media.	K5

List of Practical's

Lab No.	Topic		CO Mapping
1	Case Study Analysis	The students will be able to develop their critical thinking and analytical skills.	CO1

2	Email Role Reversal: Writing and responding to emails in peer groups	The students will practice writing and responding to professional emails.	CO2
3	Infographics – Data Analysis and Interpretation Task	The students will develop their ability to decipher important information from charts, graphs, tables, and diagrams.	CO3
4	Document Redesign Challenge: Redesigning existing technical documents to improve readability	The students will develop their ability to write and edit professional documents.	CO3
5	Abstract Formulation and Referencing	The students will be able to write research papers with proper source citations.	CO3
6	Case Study presentations	The students will improve their analytical skills and by presenting improve their speaking skills.	CO4
7	Presentation on Project Report	The students will develop professional speaking skills.	CO4
8	Ted talk simulation – summarising a Ted Talk	The students improve their ability to condense speeches.	CO4
9 & 10	Mock Interviews	The students will practice and enhance their interview skills.	CO4
11 & 12	Webinar Presentations/Online Interviews	The students will improve their ability to make presentations in professional scenarios and perform well in online interviews.	CO5

Subject Name: Artificial Intelligence and Cyber Ethics	**L-T-P [2-0-0]**
Subject Code: BNC0301/BNC0401	**Applicable in Department: All Branches**

Prerequisite of Subject: Basic understanding of computer systems and ethics.

Course Objective: The course aims to foster critical thinking about ethical issues, promote responsible use of technology, and ensure students can identify, analyze, and address ethical dilemmas in Artificial Intelligence and cyber domains.

Course Outcome (CO)

Course Outcome: After completion of this course students will be able to:		**Bloom's Knowledge Level (KL)**
CO 1	Learn key principles of AI ethics, summarizing ethical considerations and applications in AI development and deployment.	K2
CO2	Apply policies and framework for Fairness in AI and Machine Learning	K3
CO3	Apply privacy and security concepts, risk management and regulatory compliance in the field of AI and Cyber Security.	K3
CO4	Understand the nature of cybercrimes, the principles of intellectual property rights (IPR), and the legal measures necessary to address and prevent these issues.	K2
CO5	Describe the impact of AI in Society, employment and workforce.	K2

Syllabus

Unit No	Module	Topics Covered	Pedagogy	Lecture Required (T=L+P)	Aligned Practical/Assignment/Lab	CO Mapping
1	An overview to AI Ethics	Definition of AI. Ethical principles in AI. Sources of	Lecture and Case studies	5 L	Assignment	CO1

		AI data. Legal implications of AI security breaches, Privacy and AI regulations. Key Principles of responsible AI, transparency and accountability, Dual-use dilemma, Human-centric design. Introduction to Cyber Laws and Ethics, Historical development of cyber laws, Legal frameworks.				
2	Fairness and Favoritism in Machine Learning	Introduction to Fairness and Bias in AI, Types of Fairness and Bias. Impact of Bias and Fairness in AI, techniques for measuring Fairness and Bias. Techniques for mitigating bias. Current policies and frameworks for fairness in AI. Bias in data collection, Fairness in data processing. Generative AI, Types of Bias in Generative AI.	Lecture and Case studies	6 L	Assignment	CO2
3	AI Ethics and Cybersecurity Principles	Importance of privacy and security in AI, AI specific security tools and software, privacy-preserving machine learning (PPML) and privacy-preserving data mining (PPDM) Ethical considerations in phases of AI development life cycle, Risk management: Risk assessment and incident response Regulatory compliance: GDPR, HIPAA Case studies: Implementation of AI ethics guidelines and best	Lecture and Case studies	8 L	Assignment	CO3

		practices in engineering projects, Ethical decision-making processes and tools for engineers working with AI technologies				
4	Cybercrimes, IPR and Legal Measures	Types of cybercrimes and their impact, Legal measures for cybercrime prevention and prosecution. IPR: Copyrights, trademarks, patents, and trade secrets, Ethical implications of intellectual property, Cyber security and privacy issues	Lecture and Case studies	5 L	Assignment	CO4
5	AI Contribution to Social Evolution	Positive and negative political impacts of AI, Role of AI in social media and communication platforms, AI-generated content and deepfakes, Applications of AI in addressing global challenges, Key technical stakeholders in AI deployment: developers, researchers, policymakers, Technical Impacts on Employment and Workforce: Automation technologies: robotic process automation (RPA), autonomous systems	Lecture and Case studies	6 L	Assignment	CO5

Total	30 Hours

Text-Books

S.No	Book Details
1.	Introduction to Information Security and Cyber Laws, Simplified Chinese Edition by Surya Prakash Tripathi, Ritendra Goel, 1 January ,2014.
2.	AI ETHICS: Paving the Path for Responsible Machine Learning, Shivanand Kumar, 2014.

Reference Books

Sr No	Book Details
1.	AI ETHICS (The MIT Press Essential Knowledge series), by Mark Coeckelbergh, 2018
2.	Computers, Internet and New Technology Laws by Karnika Seth – by Karnika
