Course T	itle	Advanced Data Structures and Algorithms	Data Structures and Algorithms3 0 03				
Course of	bjecti	ve:					
1 To	o prov	ide an overview of data structures and algorithms					
2 To	o anal	yze the concept of data structures through ADT including List	t, Stack, Qı	ieues.			
3 To	o be fa	amiliar with advanced data structures such as height balanced	trees, hash	tables,			
pr	riority	queues.					
4 To	o unde	erstand concepts about searching, sorting and hashing technique	ues.				
5 To	o anal	yze problems and writing program solutions to problems by id	dentifying t	he			
ap	propr	iate data structure.					
		nts / Syllabus	1

Course out	come: After completion of this course students will be able to	
CO 1	Interpret the need of data structure and algorithms and analyze Time space trade-off.	K2, K4
CO 2	Understand various algorithms and solve classical problems	K2, K3
CO 3	Understand the advantages and disadvantages of linked lists over arrays and implement operations on different types of linked list.	K2, K3
CO 4	Implement and evaluate the real-world applications using stacks, queues and non-linear data structures.	K3,K4
CO 5	Implement data structures with respect to its performance to solve a real-world problem.	K3

Course Tit	le	Artificial Intelligence	3	0	0	3
Course obj	iecti	ves:				
This course a to develop t	ims the	to cover an overview of Artificial Intelligence (AI) prin basic understanding of applying these techniques edge representation, and learning.	-			
		Course Contents / Syllabus				
UNIT-I	Int	roduction			8 hou	irs
introduction	to p	sing (NLP), Text Analytics, Applications of Artificial I ython or other API tool used for Implementation like on to Open Data		-		
UNIT-II	Log	gic Representation			8 ho	urs
FOPL, Logic jug problem,	Pro miss	ic, First Order Predicate Logic (FOPL), Semantic Ta gramming in Prolog. Production systems and rules for ionaries-cannibals problem, Queensproblem, monkey b , etc. Solving problems by searching: state space formu	· som Danar	e Al a pr	l probl oblem	ems: water , Travelling
UNIT-III		rch Techniques		,		8 hours
algorithms ar pruning, He	nd op euris ⁄Iean	lutions, Uniformed search strategies, Informed search otimistic problems, adversarial Search, Search for gam tic Search techniques, Hill Climbing, Probler s Ends Analysis. Uninformed Search, DFS, BFS, Ite	es, n n r	ninin educ	nax, A tion,	lpha - Beta Constraint
UNIT-IV		owledge Representation & Expert System				8 hours
Knowledge r nets. Frames, system, rule-l	epre Con based	sentation, semantic nets, partitioned nets, parallel in nmon sense reasoning and thematic role frames, Archit d systems, forward and backward chaining, Frame base Resolution, Probabilistic reasoning, Utility theory,	ectur ed sys	e of stem	knowl s. Arc	of semantic edge-based hitecture of
UNIT-V	Pla	nning and Learning				8 hours
Planning with Forms of lear learning and Bayes Netwo	rning Gen rk,	te space search, conditional planning, continuous plann g, inductive learning, Reinforcement Learning, learning etic learning. Probabilistic Methods, Bayesian Theory prithms: swarm intelligence, ant colony optimization.	deci	sion	trees,	Neural Net

Course outcor	nes: After completion of this course students will be able	e to
CO 1	Understand the fundamental of the artificial intelligence	K2
	(AI) and its foundations.	
CO 2	Apply principles and techniques of AI in problem solving.	К3
CO 3	Analyze the various tools for application of AI.	K4
CO 4	Apply the concepts of knowledge-based system used in AI.	К3
CO 5	Understand the various Evolutionary Algorithm in AI.	K2

	M. TECH FIRST YEAR		
Course Code	AMTCY0111	LTP	Credits
Course Title	Advanced Security of Networked Systems	300	3
Course object			
1	Introduce Advanced topic of computer networks and Security	to the stu	dents with
	the eye on future trends.		
2	To understand necessary Approaches and Techniques to build	protectio	n
	mechanisms in order to secure computer networks.		
3	Apply design principles of authentication systems.		
4	Compare the key management problems for symmetric crypto	graphy-b	ased and
	asymmetric cryptography-based security protocols.		
5	Compare the unique security challenges in wireless networks;	apply va	rious wireless
	network security standards.		
Pre-requisites	: Basics of networking and cryptography		
	Course Contents / Syllabus		
UNIT-I	INTRODUCTION TO NETWORK SECURITY		Hours
	y Model, Types of Attack, Overview of Most Common		
•	ew, Password Attack, Dictionary Attack - Thwarting diction	•	
	o thwart dictionary attack, Password Cracking - Hashing ov	erview,L	ookup tables,
	ainbow Table, Modern Linux Password Hashing Scheme,		
UNIT-II	MALWARE AND VIRUSES		Hours
	Infection Techniques, Anatomy of a Virus, Virus Propagation,		
	on Infection Techniques, Memory Strategies etc., Defense Agai		
	udy Morris Worm &Conficker worm), Malware analysis,Static	and Dyn	amic
Malware analysis			
UNIT-III	APPLICATION VULNERABILITIES		Hours
	nerabilities – Smashing the Stack for Fun and Profit, Forr		
-	Authentication- Overview of Authentication, Need for Key		
	& Key Distribution Protocols - Needham Schroeder, Kerber		
	do and True random number generators, Cryptographically serator, PRNG – LinearCongruential Generators, Entropy - set		
Message Authen	č 1 .		ind naroware,
UNIT-IV	ADVANCED TCP/IP	8	Hours
	bilities- TCP Overview - Connection Setup/Teardown, Pack		
	network, IP Spoofing, ARP Poisoning, UDP Hijacking, Fragn		0 0
•	on & Denial of Service, UDP Hijacking, TCP Spoofing, TCl		-
	attack, SYN Flood Attack, Denial of Service Attack, Port Scar		•
UNIT-V	WIRELESS SECURITY AND FIREWALL	· · ·	Hours
	Zones, Zone Transfer, BIND, DNS Spoofing, DNS Cache		
	nnel & Transfer Modes, IPSec Authentication Header, Encapsu		•
	Sec Key Exchange, VPNs SSL/TLS For Secure Web Services	•	•
•	SL Connection State, SSL Session State, SSL Record Proto		
	Protocol for Anonymous RoutingFirewalls – Packet-filtering,		

Overview, Cipher Text Attacks

~		
Course o	utcome:After completion of this course students will be able toIdentify, analyse and apply best practice for security systems that are	K2,K4
001	currently used or currently being developed towards standardisation of	112,117
	network systems	
CO 2	Define exact properties and requirements of security solutions for network systems	K1
CO 3	Analyse and identify vulnerabilities, threats and attacks against a number of modern or new network systems	K4,K1
CO 4	Analyse general security mechanisms qualitatively and quantitatively	K4
CO 5	Design and analyse security protocols, mechanisms, and architectures that protect the network operation against attacks	K6,K4

	M. TECH FIRST YEAR	
Course Code	AMTCY0112 L T P	Credits
Course Title	Fundamentals of Data Science and Applications 300	3
Course objectiv		
1	Develop practical data analysis skills, which can be applied to practical pro	blems.
2	Develop fundamental knowledge of concepts underlying data science proje	
3	Develop practical skills needed in modern analytics.	
4	Explain how math and information sciences can contribute to buildin algorithms and software	-
5	Develop applied experience with data science software, programming, app and processes.	lications
Pre-requisites:	Basic knowledge of statistics, linear algebra.	
<u> </u>	Course Contents / Syllabus	
UNIT-I	INTRODUCTION TO DATA : Data Stores - Introduction to Structured Data, DBMS Concepts, RDBMS (Oracle/MySQL), NoSQL Concepts, Mongo, Cassandra, Basic to complex Querying in SQL. (Lab Element), Query tuning.,	8
UNIT-II	DATA ANALYSIS TECHNIQUES / STAGES: Introduction to Unstructured Data, Taming Unstructured Data. Understanding Data - Understanding data formats (XML, JSON, YAML, PMML), Data feeds (RSS, Atom, RDF), Preparing Data - Data Analysis/Profiling, Data Cleansing.	8
UNIT-III	 DATA WAREHOUSING AND LEARNING ALGORITHMS: OLTP & OLAP - Fundamentals of Data Warehousing, Dimension Modelling. Slowly Changing Dimensions, ETL Process, Performance Tuning of warehouse Loads, Data Analytics Fundamentals, Pre Processors, Post Processors Supervised Learning - Linear/Logistic Regression, Decision Tree, Naïve Bayes Unsupervised Learning, K-Means, Association Rules, Hands on implementation of the basic algorithms. 	8
UNIT-IV	HADOOP THEORY: Introduction to Hadoop, Map-Reduce. Hadoop Theory and hands on implementation, MR coding, Basic Management and Monitoring of Hadoop Cluster, Implementation of K- meansalgorithm using MR.	8
	DATA ANALYTICS: Introduction to Streaming Data Analytics,	

UNIT-V	Introduction to Spark, Introduction to Storm, Introduction to Scala.Case	8
	study of Walmart Sales Forecasting Data Set, Boston Housing Data Set.	

Course outcome: After completion of this course students will be able to

CO 1	Discuss basic notions and definitions in data analysis, machine learning.	K2
CO 2	Explain standard methods of data analysis and information retrieval	K1,K2
CO 3	Analyse the problem of knowledge extraction as combinations of data filtration, analysis and exploration methods.	K4
CO 4	Solve a real-world problem using mathematical equations.	K3
CO 5	Evaluate to develop complex analytical reasoning.	K5

 UNIT-V
 8

 Object Oriented Testing : Overview of Testing and object-oriented Testing, Types of Testing, Object oriented Testing strategies, Test case design for OO software, Inter class test case design, Software Quality Assurance, Quality factors, Object oriented metrics: Project metric, Process Metric, Product metrics

Course outcome: After completion of this course students will be able to

CO1	Demonstrate the ability to apply the knowledge of object-oriented concepts for					
	solving system modeling and design problems.					
CO2	Design and implement object-oriented models using UML appropriate notations.	K3,K6				
	And apply the concept of domain and application analysis for designing UML					
	Diagrams.					
CO3	Apply the concepts of object-oriented methodologies to design cleaner softwares					
	from the problem statement.					
CO4	use an object-oriented method for analysis and to know techniques aimed to	K3				
	achieve the objective and expected results of a systems development process					
CO5	Demonstrate various issues for object-oriented testing. And Distinguish	K3				
	characteristics of structural testing methods

Course	outcome: After completion of this course students will be able to	
CO 1	Describe the basic terminology of Software Project Management.	K ₁ , K ₂
CO 2	Explore project lifecycle & scheduling techniques to implement project elements successfully.	K _{3,} K4
CO 3	Review the dimensions of project monitoring and controlling through different types of reviews.	K2
CO4	Implement testing objectives, test plan and implement various types of testing, ensuring good software quality	K3
CO 4	Defend various tools to facilitate software project management process	K _{4,} K5

Course	objecti		•	
1	This co	burse will look at the emerging legal, policy and regulatory ace and cybercrimes.	issues per	taining to
2	Compu	er all the topics from fundamental knowledge of Informati ter Architecture so that the participant can use to understand g of a computer.		
3		ntify the emerging Cyberlaws, Cybercrime & Cyber s dence impacting cyberspace in today's scenario.	ecurity tr	ends and
4	Device Operati	vide vivid knowledge about different types of Digital Forensics Forensics, Network Forensics, Cloud based Forensics etc., inc ng Procedures for IO's which will be useful in investigating re ng to cybercrime.	luding the	Standard
Pre-req				
1		Course Contents / Syllabus		
UNIT-I	Cyb	ber Crime	8	Hours
		story and Development – Definition, Nature and Extent of Cy s - Classification of Cyber Crimes – Trends in Cyber Crimes a		
UNIT-I	I For	ms of Cyber Crimes, Frauds	8	Hours
diddling, defamatic adware, s frauds. C	salami on, comp careware loud bas s, Intelle <u>d other f</u>		ofing, por ial media, a ncial frauda gle, fraud	nography malwares s, telecon detection
UNIT-I	II F	undamentals of Cyber Law	8	Hours
	cial refe	ber space, Jurisprudence of Cyber Law, Scope of Cyber Law rence to Information Technology Act, 2000 (as amende 2008.	•	
UNIT-I	V W	/indows Forensics	8	Hours
Information to-Port M Information Non-Vola	on (Cach Aapping, on, Com a tile Da t	 Ilection: -Memory Dump, System Time, Logged on Users, Oned NetBIOS Name Table), Network Connections, Process In Process Memory, Network Status, Clipboard Contents mand History, Mapped Drives, Shares Collection: -Disk Imaging (External Storage such as US Dump, Event Logs, Devices and Other Information, Files 	nformation , Service SB and Na	, Process / Driver

Blocking port

Registry Analysis, Browser Usage, Hibernation File Analysis, Crash Dump Analysis, File System Analysis, File Metadata and Timestamp Analysis, Event Viewer Log Analysis, Timeline Creation, Evidence Collection in Linux and Mac Operating system.

UNIT-V Network Forensics

8 Hours

Understanding Protocols with Wireshark: -TCP, UDP, HTTP(S), SSH, Telnet, SMTP, POP / POP3, IMAP, FTP, SFTP, ARPPacket Capture using Wireshark, tshark and tcpdump, Packet Filtering, Extraction of Data from PCAP file, Netflow vs Wireshark, Analysis of logs: - CISCO logs, Apache Logs, IIS Logs, Other System Logs.

Course outcome: After completion of this course students will be able to

CO 1	Understand the Cyber Crimes in India and trends in world	K2
CO 2	Classify different Frauds like hacking, phishing, credit card	K2
CO 3	Explain the details of Cyber law in India with Information Technology Act, 2000 & 2008	K2
CO 4	Understand the windows Forensics in reference of volatile and non- volatile data collection	K2
CO 5	Understand the network Forensics with the help of different protocols used in networking	K2

	M. TECH FIRST YEAR		
Course Cod	e AMTCY0212 L T	P	Credit
Course Titl	e Data Science for Security Analysis 3 0	0	3
Course obj	ective:		
1	To develop fundamental knowledge of concepts underlying	data so	cience projects.
2	To explain how math and information sciences can contril	oute to	building better
	algorithms and software.		
3	To develop applied experience with data science so	ftware	, programming,
	applications		
4	To give a hands-on experience with real-world data analysis	•	
Pre-requisite	s: Students are expected to have basic knowledge of algorithms a	nd reas	sonable
programming	experience and some familiarity with basic linear algebra		
	Course Contents / Syllabus	r	
UNIT-I	Introduction:		8
	What is Data Science? Big Data and Data Science hype,	Dataf	ication, Current
÷ ÷	erspectives, Exploratory data analysis	1	
UNIT-II	Introduction to Machine Learning:		8
	e Learning Algorithms, Linear Regression, k-Nearest Neigh	bors ((k-NN),k-means,
	ules, Regression and Classification.		
Introduction to			0
UNIT-III	Data Visualization		<u>8</u>
	es, ideas and tools for data visualization, Data Collection an PIs and other tools for scrapping the Web, Statistical		
	itting a model,	mouer	ing, probability
UNIT-IV	Big Data Analytics		8
	abases, SQL, Big data storage and retrieval: noSQL,GraphDB	. Big	
	apreduce, spark rdd, neural networks and deep learning	,8	
UNIT-V	Data Science and Ethical Issues:		8
	ity, ethical issue in data science-Unfair Discrimination, Transpa	rency.	Avoiding Bias,
•	alicious Attacks, Data sharing Feature engineering and select	•	•
	trieval, Network Analysis, Mining Social-Network Graphs - Soci		-
	graphs- Direct discovery of communities in graphs- Pa		
-	properties in graphs		0 0 1
Course out	come: After completion of this course students will be ab	le to	
	nderstand basic notions and definitions in data analysis, arning.	machi	ne K3
	nderstand and Apply standard methods of data analysis and info	ormati	on K2,K3
	trieval		

CO 4	Analyse translate a real-world problem into mathematical terms	K4

	M. TECH FIRST YEAR		
Course Cod	le AMTAI0215	LTP	Credit
Course Title	e Natural Language Processing	3 0 0	3
Course obje	ectives:		
introduces bot	rovides an introduction to the field of Natural Language th linguistic (knowledge-based) and statistical approache es and tools in a variety of application areas, as well as ems.	es to NLP, illustr	ate the use of
Pre-requisit	tes: None		
	Course Contents / Syllabus		
UNIT-I	Introduction to Natural Language Understanding		8 hours
levels of Lang Understanding	Language, Applications of NLP, Evaluating Language Un guage Analysis, Representations and Understanding, Or g Systems, Linguistic Background: An outline of English s	ganization of Nat	tural language
UNIT-II	Word Level and Syntactic Analysis		8hours
smoothing, ran Passage retriev Information	gram language models, generating queries from docu nking with language models, KullbackLeiblerdivergence val and ranking. Management of Information Retrieval Sys management, Digital asset management, Network Records compliance and risk management, Version c system failure.	, Divergence from stems: Knowledge management, S	n randomness, e management, earch engine
UNIT-III	Semantic Analysis		8hours
Part-of-Speech	N-grams, Evaluating N-grams, Smoothing, Interpolation n Tagging, Rule-based, Stochastic and Transformation- imum Entropy models, popular tools and technologies.		
UNIT-IV	Grammars for Natural Language		8hours
-	bs and Verb Phrases, Movement Phenomenon in Lar Grammars. Human preferences in Parsing, Encoding uncer		-
UNIT-V	Ambiguity Resolution		8hours
Probabilities,	thods, Probabilistic Language Processing, Estimating F Probabilistic Context-Free Grammars, Best First Parsing nd Ambiguity, Encoding Ambiguity in Logical Form.		

Course	e outcomes: After completion of this course students will be able to	
CO 1	Understand linguistic phenomena with formal grammars	K2
CO 2	Analyze NLP algorithms	K4
CO 3	Understand Morphology, syntax, semantics, and pragmatics of the language.	K2
CO 4	Comprehend the concepts of WorldNet, Semantic Roles and Word Sense Disambiguation	K2
CO 5	Apply NLP techniques to design real world NLP applications	К3

CO 1	Explain and apply basic concepts related to modeling and simulation.	K2, K3
CO 2	Implement bond graphs for the type of systems and analyze the bond graph according to causality conflicts, and from a given bond graph without conflicts.	K3,K4
CO 3	Understand conservation laws, constitutive relationships and other physical relations to model mechanical, electrical and flow systems	K2
CO 4	Understand dynamic response and transfer function using various tools for system modeling and simulation.	K2
CO 5	Simulate mechanical and electrical systems using the computer tools Simulink.	К3
